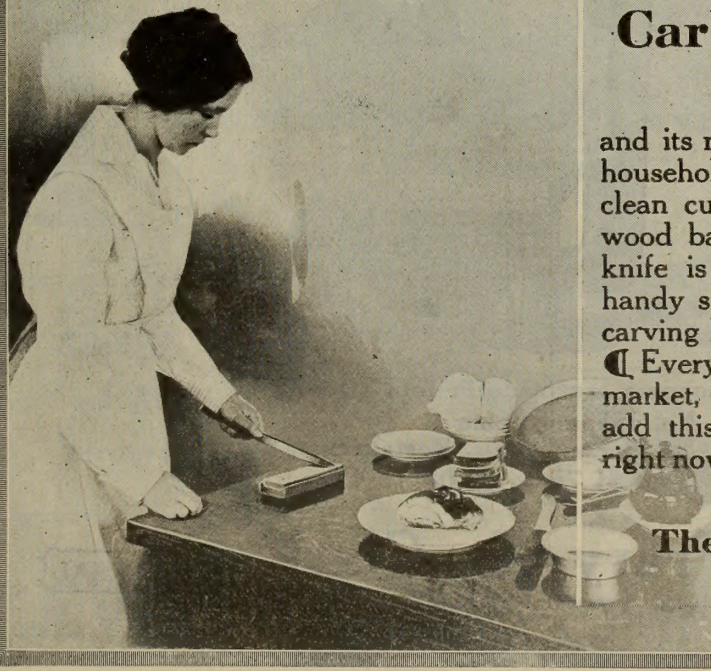
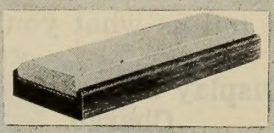
Let Us Introduce You to a New Carborundum Product



IT'S something you can place in practically every home in your community—its the



Carborundum Kitchen Knife Stone

and its mission is to make every knife in the household a sharp knife. The stone, fast, clean cutting, is mounted permanently on a wood base. Two or three strokes and the knife is keen—the stone is just the right handy size and right grit for all kitchen and carving knives.

¶ Every home needs it—the demand, the market, the profit are all there—suppose you add this stone to your Carborundum stock right now.

.....

The Carborundum Company

Niagara Falls, N. Y.

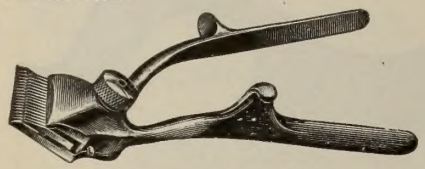
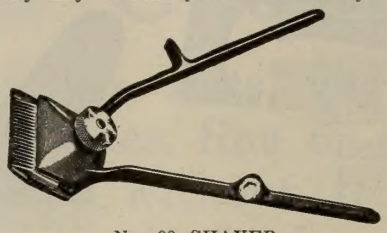
PRIEST'S HORSE and TOILET CLIPPERS

Made by American Shearer Mfg. Co.

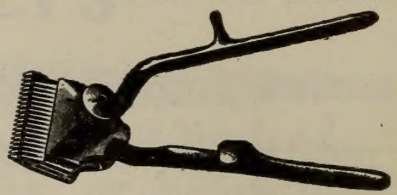
present a complete line at a range of prices covering all requirements of the trade. They are all quality goods, and represent best designs and highest standards of workmanship, regardless of price.
Some styles of Toilet Clippers are illustrated below. All are heavily copper plated and polished before nickeling, thus giving a higher finish, which lasts much longer than ordinary plating. The utmost care is used in grinding and tempering the cutting plates, giving cutting qualities whose superiority may be readily demonstrated by comparison. No. 00 and No. 000 Shaver for beard and neck trimming, are clippers of the utmost lightness and refinement, not paralleled by any other American manufacturer.



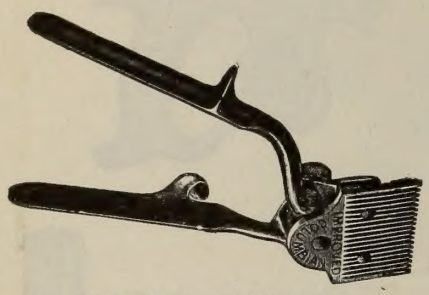
STANDARD No. 0, No. 1 and No. 2.
Retailing at about $2.50. High-class barber's clipper.



No. 00 SHAVER
A light and elegant Clipper for beard and neck trimming. Retailing at about $2.25.



SPEED
Best low-priced Clipper made. Retailing at about $1.00.



IMPROVED COLUMBIAN
with grooved bottom plate, retailing at about $1.50.

If you are not familiar with these goods, send for samples and compare them with others.

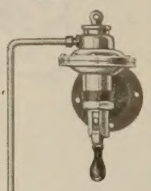
The Distant Control



The "STACK"
Distant Control System
gives control of the water heater from any part of the house.

It is an attachment (supplied with the Stack Heater) that enables you to light the gas from your kitchen or bathroom or bedroom, even if the heater is located in the basement. If you are downstairs (at the heater) and want hot water for the laundry or any household purpose, turn on the control at that point, and the heater is instantly in operation.

IT FILLS A LONG-FELT WANT FOR A LOW-PRICED AUTOMATIC CONTROL AND FOR THIS REASON IT WILL BE IN BIG DEMAND.

Stack Water Heaters

Are guaranteed to produce more hot water for a given quantity of gas, and to last longer than any other copper coil heater of equal capacity made.

Drop a line for full details.

Take Stock of Your Store

This is the time to "take stock" of your business. To see which lines are carrying the business—and which are merely "paying their way."

As a "money-maker," consider the "Famous Five":

KEARNEY & FOOT
GREAT WESTERN
AMERICAN ARCADE GLOBE

(Made in Canada)

With our 4,000 different patterns, you meet every file-demand. With our big factory-stocks at your disposal, you can do big business with a very small stock on your shelf.

With our five great plants and the most modern machinery, we give you files of matchless efficiency and service. With our complete control of every step from steel to file—we insure absolutely uniform quality from year to year.

With our 60,000,000 output yearly, we effect manufacturing economies that guarantee MAXIMUM Quality at MINIMUM Cost.

And with 90 per cent. of the file-trade controlled by this line—with a continuous campaign of publicity constantly extending and broadening the field — the "Famous Five" merit your closest consideration—NOW more than ever before.

Write to-day for FREE copy of "File Filosophy"—and our Catalog.

NICHOLSON FILE CO. - - PORT HOPE

(Jobbers Everywhere)

THE VERY BEST BRUSHES YOU CAN SELL YOUR CUSTOMERS ARE "SIMMS' SET IN RUBBER" BRUSHES, for this process of holding bristles in the ferrule overcomes the most frequent difficulty experienced with brushes, viz: the shedding of bristles.

In SIMMS' SET IN RUBBER BRUSHES the bristles are securely embedded in Hard, Vulcanized Rubber that is not detrimentally affected when used in any of the following solvents: alcohol, water, turpentine, grease, oil, benzine, naphtha, kerosene, crude oil, banana oil, varnish, paint, enamel, lacquers, boiling water, glue, paste.

Imitations under various proprietary names are offered, but are worthless when used in many of the above solvents.

SIMMS' SET IN RUBBER BRUSHES are made by skilled workmen under expert supervision and the methods and equipment used are unequalled in any other brush factory in the world.

The growing demand for Brushes made in this way is a very evident sign of the appreciation of Brush users.

SIMMS' SET IN RUBBER BRUSHES are handled by leading Hardware Wholesalers throughout Canada. If your dealer cannot supply you, write us direct.

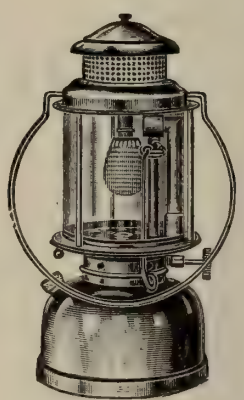
THE STORM KING LANTERN



Wind and Rain Proof — 200 Candle Power, ¼ cent per hour. Operates 15 hours on one filling of gasoline or kerosene. The highest powered, most economical, and safest lantern ever made, for farmers, dairymen, contractors, sportsmen, watchmen, and for shows, boats, railroad yards, military encampments, and way stations. Automatically cleaned, cannot clog. No wicks to trim, no chimneys to wash, no smoke, no smell, no dirt. A quick and profitable seller for dealers and agents. If you want one for your own use, ask your nearest hardware dealer to send for one on trial.

If you want the agency write for our Special Lantern Proposition.

National Stamping & Electric Works
470 S. Clinton Street, Chicago

Make Quality the Foundation of Your Stove Trade and Tie Up to a Line of Stoves and Ranges That Has Proved Its Worth and is Here to Stay.

EVERY dealer knows from experience that there is no other article he sells that will give him more trouble and loss of trade than a poor Range, while on the other hand the sale of a good Range makes satisfied and increased customers, and brings a lot of other business to his store.

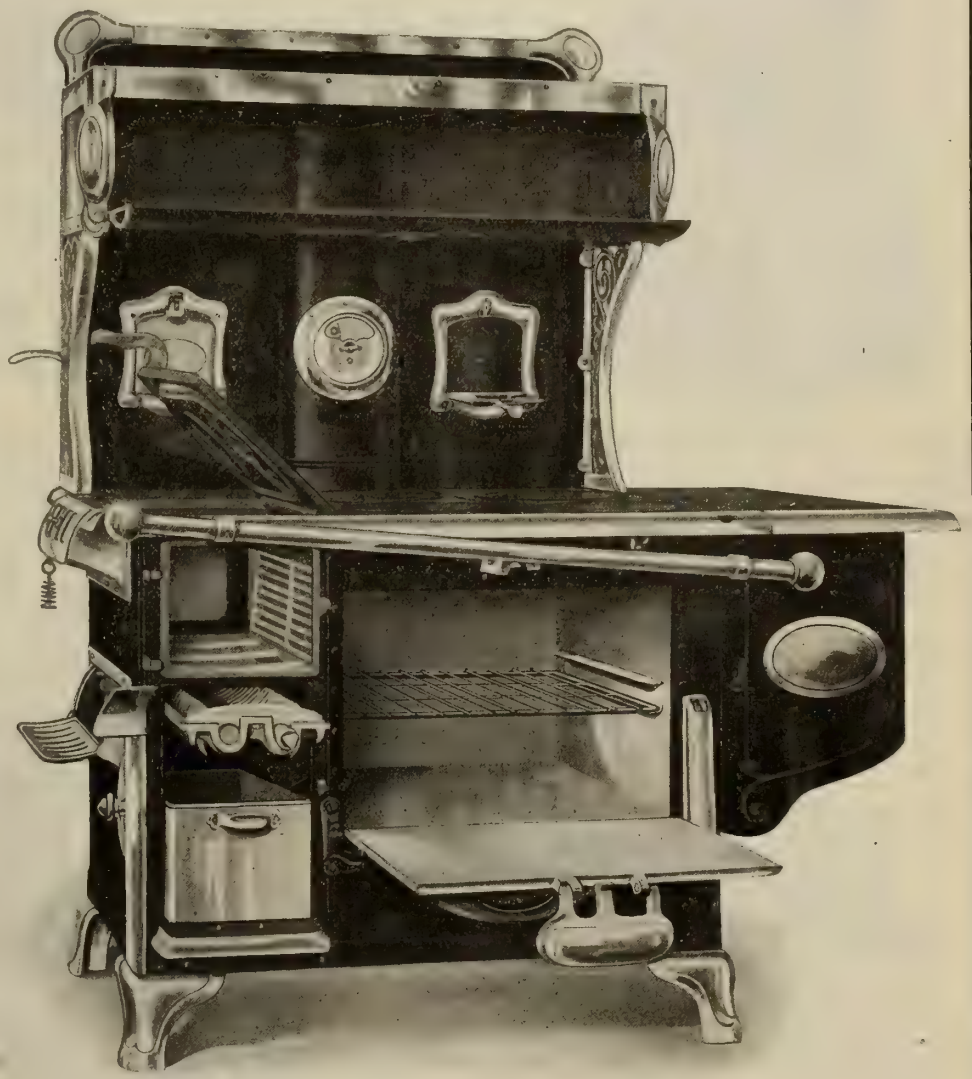
A Range should not be judged entirely from its external appearance. The dealer must rely largely upon the knowledge and responsibility of the maker to know that all internal parts are absolutely correct.

THE UNIVERSAL FAVORITE has built up, for DEALERS who handle them, a most satisfactory and profitable STOVE TRADE. The sale of a UNIVERSAL FAVORITE in a district means the sure sale of a number of others.

The Appearance, the Finish, the Workmanship, and the High-Grade Material in this Range put it in a class by itself. You have the courage of your convictions when selling it, it has so many strong points.

Every Dealer has customers who are willing to pay the price for a Range that will give absolute satisfaction and last for years. THE UNIVERSAL FAVORITE is specially built to meet the demands of this class of buyers, and the price is no higher than many other ranges offered in competition.

Put THE UNIVERSAL FAVORITE on your floor — it will prove the most profitable Range you ever handled.



Made in Two Sizes—19 and 21-Inch Ovens.

High Closets furnished in Standard or Tile Finish, as desired.

THE UNIVERSAL FAVORITE is made of Copper Bearing, Rust-Resisting Steel, and is built to last a lifetime. ORDER A SAMPLE OF THIS RANGE, EXAMINE IT, WEIGH IT, MEASURE IT, TEST IT BY EVERY MEANS. IF IT IS NOT THE MOST SALEABLE RANGE YOU HAVE EVER HANDLED, RETURN IT AT OUR EXPENSE.

It stops the Big Fellows.

It's speed and penetration that do things. They get what they're after. This is true of all sporting cartridges of the Dominion family, each one of which may be relied upon *absolutely* under every shooting condition.

Recommend Dominion Big Game cartridges to your customers who are going into the woods for big and dangerous game. Explain to them the many superior features of Dominion Ammunition. Tell them that the materials are the best obtainable—that the manufacturing methods are exact in every detail—that a rigid system of inspection and testing follows every Dominion Shot Shell and Metallic through each manufacturing stage from shell drawing to crimping the bullet. And tell them that all this means accuracy, power and thorough dependability.

Tell them that Dominion is "the ammunition made wholly in Canada."

Dominion Ammunition

Dominion Cartridge Company, Limited

MONTREAL

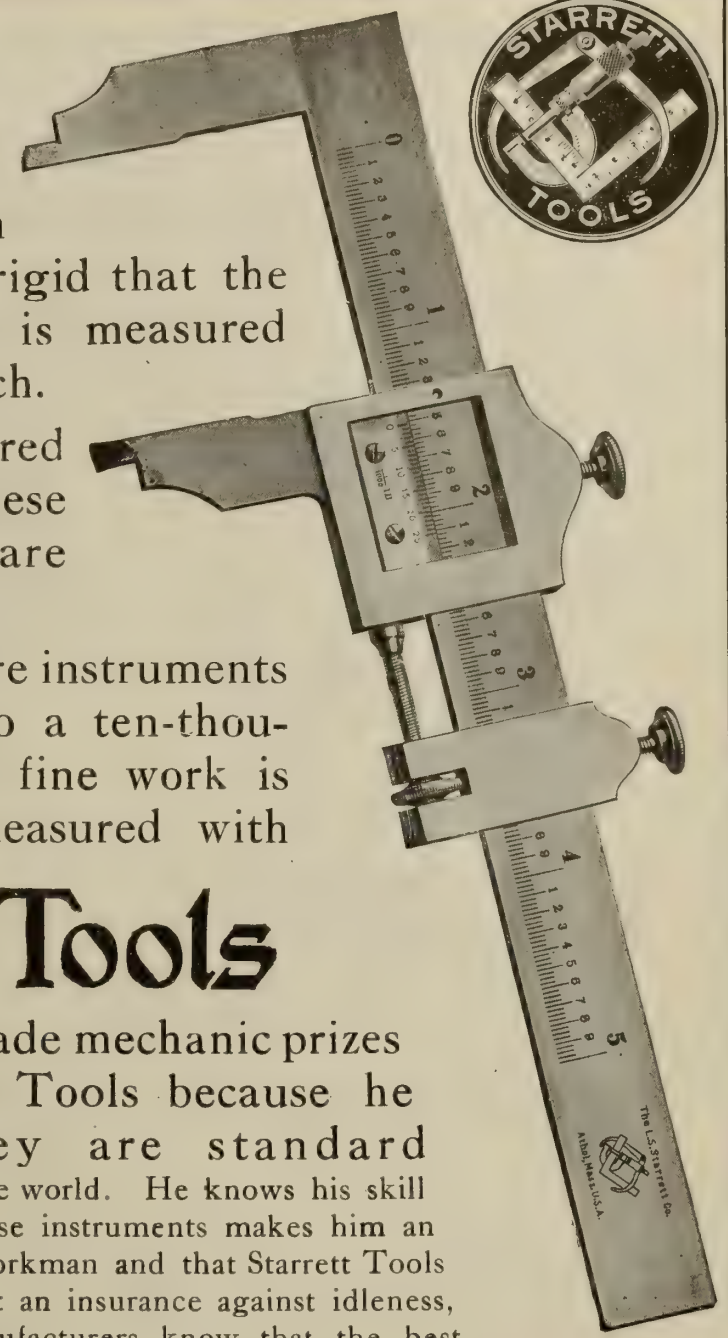
Accuracy

INSPECTION in modern factories has become so rigid that the accuracy of workmanship is measured to the thousandth of an inch.

Think of the accuracy required in the factory where these measuring instruments are made.

In the Starrett factory, where instruments are made that measure to a ten-thousandth of an inch, all the fine work is laid out—scribed and measured with

Starrett Tools



Every high-grade mechanic prizes his Starrett Tools because he knows they are standard throughout the world. He knows his skill aided by these instruments makes him an accurate workman and that Starrett Tools are almost an insurance against idleness, for manufacturers know that the best workmen use the best tools.

Starrett Tools include 2100 styles and sizes of fine instruments—steel rules, tapes, squares, levels, hack saws, calipers and dividers, micrometers, gages, speed indicators and many others.

HERCULES

Hercules Service to Hercules Customers

ANY retail merchant who has enlisted the aid of Hercules Service in his selling work will tell you that it makes good. Perhaps personal experience has proven to you the truth of this.

There is reason for it. In the majority of cases the advertising material we give to a customer advertises his business *as a whole*, as well as Hercules Powders in particular.

As a basis upon which to build, we supply powders that you can safely back with your reputation—powders that turn one-time purchasers into all-time patrons. Such powders are *Infallible*, *E. C.*, and *L. & R. Orange Extra*.

Splendid evidence of the quality of Hercules products is found in the fact that the Grand Prize for Smokeless Shotgun Powder at the Panama-Pacific Exposition was awarded to the Hercules Powder Co.

These Hercules Powders have been widely and persistently advertised. They are known to almost every handler of a shotgun. They are used exclusively by many devotees of the sport. This year we are advertising in double the number of publications used last year. Their circulation is 5,353,200 copies.

In addition to this national publicity we have prepared a number of business-getting aids which you can employ with profit in your own locality. These are described on the opposite page.

Strong Sporting Goods Ads

These ads, furnished in a variety of sizes and styles, cover your entire line of sporting goods. They advertise *your* business—more than ours. In set up and illustration they are in decided contrast to ordinary ads of this sort. You will find it to your advantage to use them either in newspapers or circulars. They come in plate form, ready for use.

Striking Posters

We shall continue to supply our two famous posters which during the last year have been in such great demand. In addition to "The Trap Shooter" and "The Duck Hunter" we are now ready to send out our handsome 1915 poster—a girl and dog—both winners.

These posters with their beautiful, bold color effects, not only liven up the store but also link up in a practical way with our great national advertising campaign.

Eye-Catching Mechanical Display

This display never fails to keep people in front of the window. It represents a trapshooter taking aim and breaking a flying target. If you have electric current you will find this a most effective display. Owing to the demand for this feature and the limited number on hand, we can lend it to each merchant for a short time only.

Interesting Booklets

You should always have a supply of the two Hercules booklets on your counter. Many retailers also find them highly profitable in circularizing members of trapshooting clubs and other followers of the sport.

Trapshooting, profusely illustrated, treats of this delightful sport from the viewpoint of both beginner and veteran. It gives pointers to both.

Hercules Sporting Powders, should be read by every owner of a rifle, shotgun or revolver.

Neat Counter Displays

Counter displays are always handy and worth while when they are skill fully designed and not cumbersome. You'll have use for the Hercules displays.

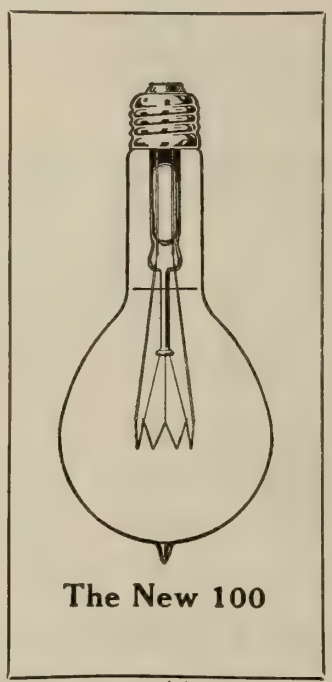
Dealers who sell Hercules Sporting Powders are entitled to the above advertising aids without cost. Let us know what you can use. If you want electros of advertisements, write for folder that shows the several styles.

HERCULES POWDER CO.

Wilmington, Del.

POWDERS

A New Store Lamp



The New 100

THE new 100-watt *Mazda C* Lamp is your present opportunity. It is essentially a store lighting lamp—for display windows and interiors. Its whiter light will bring out all the attractive points of the merchant's wares. The concentrated light source makes the re-direction and maximum utilization of light certain.

That's the lamp. The field is all around you; stores—display windows and interiors.

Your strongest, most convincing talking point is the lamp itself.

Light your own windows first. *Demonstrate the lamp itself to your prospect.* Sell one merchant lamps for his window to-day and you'll sell his neighbors to-morrow.

Sunbeam and C.G.E. Mazda

The Way to Better Light

CANADIAN GENERAL ELECTRIC CO., Limited

Manufacturers of Electrical Apparatus and Supplies for Railway, Light and Power Purposes.

HEAD OFFICE : Toronto. DISTRICT SALES OFFICES : Montreal, Halifax, Ottawa, Cobalt, Porcupine, Fort William, Winnipeg, Regina, Saskatoon, Calgary, Edmonton, Nelson, Vancouver, Victoria, Prince Rupert.

Sew-E-Z Motors
For Sewing Machine Work

Sew-E-Z will do all kinds of sewing. Without extra pressure it will put the needle through several plies of heaviest fabric. And all the attachments are more easily used because your attention is undivided.

This simple little wonder-worker changes any sewing machine (old or new) into an electric self-operating labor-saver.

Just place Sew-E-Z on your machine and drive one screw. Attach the plug to any electric light socket. Then place the little pedal on the floor. A slight pressure of your toe starts the wheel. You have a complete self-operating sewing machine.

Don't work your foot. Just press a bit harder to go faster. No effort is required- no exertion whatever. So simple a child can operate it.

PRICE COMPLETE $18.00

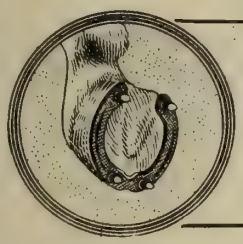
Neverslip Shoes and Calks



NEEDED BY EVERY OWNER OF VALUABLE HORSES

FIRM FOOTING AND ACCIDENT INSURANCE FOR HORSES ON SLIPPERY ROADS

The old method of rough sharpening is all right when freshly done, but it soon wears smooth in service.

The Red Tip Calk actually becomes sharper as it wears, the centre being made of high carbon steel and the outer covering of a softer metal. It is positively self sharpening and will present a sharp point with which to grip at all times.

Saves much time. When the ordinary shoe wears down it must be ripped off to be resharpened, whereas a new set of Red Tip Calks can be inserted in twenty minutes without removing the shoe.

Recommended by blacksmiths and users who know.

Conditions in the Hardware Trade

More Optimistic Feeling as a Result of Excellent Crops — Fall Trade Opening Up Fairly Well—Steps Taken by Government to Secure More Business for Canadian Firms.

REPORTS from various parts of Canada indicate that a much more optimistic feeling prevails in all branches of the hardware trade than has been noticeable for many months. The usual midsummer quietness is over, and all eyes are turned toward the fall trade, which in many districts has opened up in a very satisfactory manner. Building operations, as far as city trade is concerned, are very slack, but there appears to be a fair amount of building going on in agricultural districts.

There is a very fair movement of seasonable hardware lines, and the advent of cool weather will have a stimulating effect on many fall lines.

This is particularly the season when in the general trade there will be a demand for heaters and ranges. It is the time of the year when the problem of heating the home for the winter must be considered, and when the summer cooking apparatus is put away for the time being and ranges and heaters come into demand.

From British Columbia reports as to mining industry are exceedingly promising, the production of base metals for war materials being on the increase. At the same time, the lumber men are feeling the pulse of quickening business. At the other end of the Dominion on the Atlantic Coast, business is brighter and prospects are more hopeful than has been the case for some months.

In the central provinces, especially at centres like Montreal, Toronto, and Winnipeg, the demand for commodities is improving. At the last named point, however, it is not so marked as in Toronto and other Eastern points. Possibly the cause of this is that over the entire West the population is absorbed in handling unusually heavy crops. It is this great fact that is stimulating business throughout the entire Dominion. Reports to hand indicate that the yield will be higher than was generally expected. The crop is undoubtedly an excellent one, but as to the actual yield in bushels, it would be impossible to arrive at anything like an accurate estimate until threshing has progressed somewhat further. Meanwhile business has become more hopeful as the result of the abundant crop.

The details of Canada's export trade for July were given last week, and they show that agricultural produce exports fell off very considerably. Agricultural products dropped from $14,000,000 in June to better than $9,000,000 in July. As compared with a year ago July exports of domestic produce show a substantial increase, and they exceed the imports by about $9,000,000.

Reports of the financial condition of the principal steel companies in Canada are exceedingly satisfactory. Conditions in the trade continue to improve, due principally to increasing export business and demand for rounds and forgings for shells. In this regard it is announced that as a result of Mr. Thomas' visit further orders approximating fifty million dollars will be placed in Canada for making munitions. It is further stated that it is the desire of the authorities to place such orders where they can be most speedily and economically filled.

Steps were taken by the Canadian Government early this week to organize an effective and energetic coalition of the representatives of industry and finance with the Militia Department towards the production in Canadian factories of war munitions in the largest possible quantities and with the greatest possible expedition.

Representatives of finance and industry to the number of a hundred or more were summoned to Ottawa by Sir Robert Borden and Sir Sam Hughes for a conference as to how best to finance and produce the ammunition, ordnance and supplies of all kinds of war munitions which Canada can furnish to meet the pressing needs of Great Britain and her allies.

The conference was with a view to taking counsel together as to the possibilities of manufacture, the methods of financing, etc. The conference was, of course, of a confidential character, but

(Continued on page 61.)

ANOTHER HARDWARE TRIUMPH

The Rice Leaders of the World Association recently concluded a National Window Display Contest, in which $15,000 in prizes was distributed to 463 persons and firms, the awards ranging from $2,000 down to $10. There were over 30,000 participants in this contest. Ten of the prizes came to Canada and it is interesting to note that eight of the ten prizes were won by Canadian hardware firms. Thus Canadian hardware window trimmers have scored another triumph. The prize-winning firms are: A. M. Bell & Co., Halifax, N.S.; The Marks, Claret, Dobie Co., Ltd, Port Arthur, Ont.; Ashdown Hardware Co., Ltd., Winnipeg, Man., (two prizes); The Canadian Fairbanks Morse Co., Quebec, Que.; The Day Hardware Co., Red Deer, Alta.; Sommerville Hardware, Ltd., Edmonton; Bond Hardware Co., Guelph, Ont.

To List Property Owners

Proposal of Saskatchewan Executive of the R.M.A.—Meeting in Moose Jaw to Hear Reports From Dominion Board Convention—Bankrupt Stock Problem.

MOOSE JAW, Sept. 14. — Important matters of interest to the retailers of Saskatchewan were discussed in the meeting of the Provincial Executive of the Retail Merchants' Association held here recently, at which J. L. S. Hutchinson, Provincial Treasurer, and F. E. Raymond, Provincial Secretary, of Saskatoon, were present. Their report as delegates to the Dominion convention was presented and endorsed and a hearty vote of thanks accorded to Mr. Hutchinson and Mr. Raymond for the work they had done.

The Executive also expressed itself as in complete accord with the resolution passed by the wholesalers of Regina in favor of the repayments of advances to farmers for their seed grain being extended over a number of years, and opposing the policy announced in the letter sent by J. Bruce Walker on behalf of the Government to farmers who have received assistance.

The proposal that an alphabetical list of property owners be got out by the Land Titles Office for the benefit of the retailers was again taken up, and it is intended to approach the Government with the object of this being done. They believe that this will be of assistance not only to the retailers, but also to the Government officials in carrying out their duties. They do not intend to ask for a free service, but anticipate that a reasonable sum will be charged for every search.

Handling Bankrupt Stocks

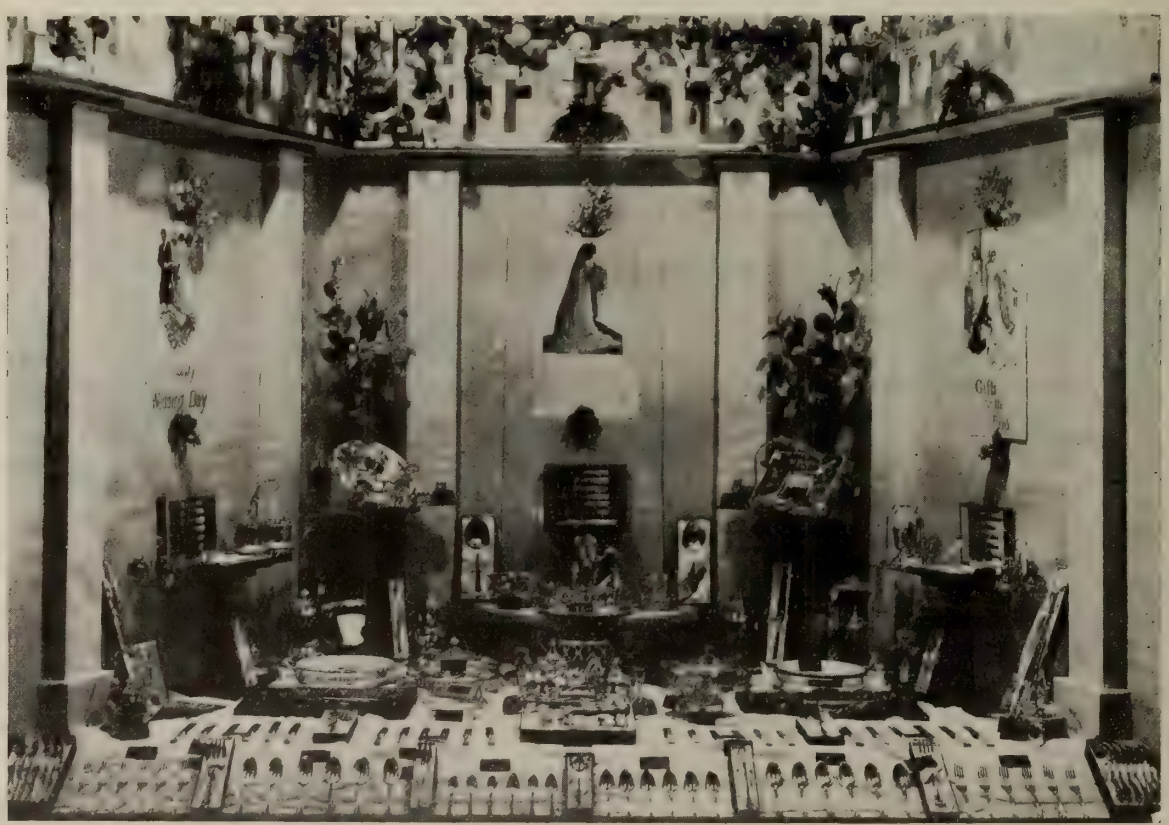
The executive is also trying to bring about the appointment of an official assignee or the establishment of a bankruptcy court whereby bankrupt stocks can be more equitably handled so that the interests of both the debtor and the creditor may be safely guarded.

A report was also made on the progress of the Retail Merchants' Mutual Fire Insurance Co. J. W. Black has now been placed in charge of the insurance end of the association. His duty is to check the policies for errors, see that policies run concurrently, and check rates, and the officials are anxious that retailers should take advantage of this section of their work, whether members or not.

The cost of re-registering execution was also discussed. Under the present law an execution must be renewed every two years, and it is felt that this adds very considerably to the costs and that when once a judgment is registered it should stand until it is paid off. The opinion is that an execution should hold good as long as a judgment.

The amendment to the Exemptions Act passed at the last session was also under discussion. Mr. Raymond stated that he knew of one case where no less than $15,000 was covered by chattel mortgages, but that, under the amendment, this was practically wiped from under the merchant's feet, and this was only one out of a hundred on a similar

(Continued on page 61.)



Suggestion for window display featuring goods suitable for wedding gifts. There is still time to secure a good volume of wedding goods trade during the present month. The above display was arranged by Chas. Byford for the Bond Hardware Co., Guelph, Ont. The display, although exceptionally attractive and very effective, was arranged at small cost. Window trimmers can secure many ideas from the above display.

Beating the Mail Order House

Hardware Merchant in District Worked Hard by Pedlars and Mail Order Houses — Made Personal Calls on Farmers and Sold Two Cars of Fencing — Used Newspaper to Advertise.

"ONLY a few weeks ago a Toronto mail order house shipped seven tons of catalogues into this part of the country, and I doubt if there is a farmer within twenty miles of here who has not received one of these mail order catalogues," said C. H. Thornton, of Thornton Brothers, Bradford, Ont., in conversation with a Hardware and Metal representative a few days ago. Bradford is a town of about 1,000 population, situated 42 miles north of Toronto.

"I know that the catalogue house takes a great deal of business from this locality," continued Mr. Thornton, "and while we do all we can to combat mail order competition, it is a fact that they annually secure from this community large sums of money for goods which they ship in here. Not only have we to contend with the catalogue houses, but also the numerous agents and pedlars who travel through this section of the country. We are located so near the large cities, and have such a splendid farming community, that this district is a happy hunting ground for agents. Hardware is not the only line affected by pedlar and mail order competition. Clothing, dry goods, grocers, harness dealers, and all other businesses suffer.

"It is strange to me that farmers will continue to buy goods from pedlars. Although the average farmer knows or should know that about 90 per cent. of pedlars are out to do-up the public very often the farmer pays the pedlar more than the price charged for similar goods in the retail stores.

"Take for instance the coal oil situation. Only this summer the district has been thoroughly worked by pedlars, who sold coal oil at ½c per gallon more than the price asked by local hardwaremen. The pedlar also sold steel tanks for 50c more than the price asked for a similar tank by our firm. I have talked to several farmers about the coal oil proposition, and asked them why they paid the pedlar more for coal oil and tanks than the same goods could be purchased at in our store. The farmers, in nearly every case, gave the same reason—that the agent said his goods were the best and produced several arguments to back up his assertion. We can't afford to peddle our whole line of hardware through the country, but I had one experience this season that demonstrated to me how you can sell goods to the farmer by following along the same lines as the pedlar. I intend to go after business the same way next year.

Sold Wire Fencing

"Last year I carried in stock about 300 rods of wire fence. This stock of fence was received very early in the spring, and I carried the greater portion of it all summer. I sold several rolls during the summer, but had to carry some of the stock over until this spring. I reasoned this thing out and said to myself if these agents can come in here, perfect strangers most of them, and sell goods in large quantities to the farmers, when the farmers can buy in small quantities in their local stores, there must be some market in the country for a product like wire fence. Fence is something every farmer can use, and in almost every case the farmer needs wire fence for the improvement of his farm, so I decided that I would try the direct solicitation plan myself. I sent to the manufacturers for catalogues and other printed matter, and also requested them to send me a cut showing their fence so that I could use it in our local newspaper. I received neat samples of each kind of fence. Then I prepared an advertisement for the local paper and planned my routes into the country. Having secured a horse and rig from the local livery, I started out on my first trip as a wire fence agent. I have learned one good lesson from that first experience—that farmers, if in need of a staple article, will in the majority of cases place an order.

"At almost every farm I called I noticed the great possibilities for selling fence, and although each farmer visited was not in a position to place an order at the time, the results I obtained on my first day out were very gratifying, and I decided to work to the limit in the next few days.

"The second day brought fairly good results also; and it seemed that each day the business improved over the preceding day. The fact that other farmers had placed orders with me made some of them feel that they would not let so-and-so get the better of them by putting up a modern fence and so would place an order.

"But this was not why I sold the fence. The reason I sold the fence was because most of the farmers were in the market for fence, and I pointed out to them the necessity for improved fences on their farms. Also I found that my prices compared very favorably with those of the catalogue houses and pedlars, and I demonstrated to them the superior quality of my fence against the fence of the catalogue house.

"Several features were combined in the fence I was offering that could not be found in the fence illustrated in the catalogues, and I even secured orders from several farmers who had previously decided to send to the catalogue houses for their supplies.

"It was not all smooth going, but the majority of the farmers were convinced that I had a good fence and gave their orders to me. In order to make a thorough canvass of the country within a radius of ten miles, we had a list made out of all the farmers who inquired at the store for fence as a result of our ad in the local paper."

"How could you tell that these farmers were interested through the ad ap-

(Continued on page 46.)

An example of the style of advertising used by Thornton Bros. to sell wire fence.

The West Hard At It

Optimistic Report Received From Eastern Manufacturer—A Bountiful Harvest Real Estate Conditions Righting Themselves—A Great Tourist Traffic —Production the Watchword.

THE manager of a large Eastern Canada manufacturing establishment who is in the West, in writing to the MacLean Publishing Co., refers incidentally in the following terms to Western conditions and prospects:

"This is my first trip through to the Coast, and it has been an education to me. If you have not yet made the trip, it is a pleasure in store for you.

"One could not travel through the West, stopping off at the principal cities, as I have done, without being greatly impressed with the vastness of the country, and its wonderful possibilities, as yet undeveloped. In the past few months I have traveled from coast to coast, touching every province in the Dominion, and nowhere have I found them "harder at it" than right here in the West. It is true that the cities have felt the depression, and many merchants are suffering from an apparent lack of capital, caused no doubt by over-hasty expansion, resulting in high rents and a consequent abnormal cost of doing business, but it is to be hoped that is only temporary, and it looks as though general trade will be greatly relieved when the wonderful crop of 1915 is harvested. The ideal weather prevailing throughout the West during the past few weeks has removed any uncertainty as to the harvest being as bountiful as was anticipated, and any slight frosts that might occur now will only tend to harden the grain.

"The tourist traffic they tell me is greater than ever before. Everywhere one hears the most pleasing comments, especially from Americans, regarding our beautiful farming country and wonderful opportunities. This is all bound to have a direct bearing upon immigration, and the indirect benefits from such advertising cannot be calculated in dollars and cents.

"Speaking of general conditions, it appears to me that the marvellous optimism that pervades the West, must win out, especially as now there is a vast difference between "optimism" and "wild-catting." One has only to talk to the dealers as I have done, to learn that good, legitimate business is receiving more attention to-day than at any time in the past. The kind of attention that produces results. Real estate is taboo, and there can be no question but that the change is for the better. There is hardly a city but what has suffered a decrease in population, but this is only a natural sequence to the boom of a few years ago, and the situation will undoubtedly readjust itself in the near future—not too quickly it is to be hoped, because I feel there is more to be feared from an immediate revival of the old policy than from a continuance of the new. Let us rather gradually assimilate the new idea, and when the substructure of our business methods has been rebuilt and thoroughly established, then we can turn our attention again to expansion, and the result will be all that could be expected.

" 'Production' just now is the watchword throughout the West, and it is to be sincerely hoped that the importance of that word will be so impressed upon the mind of every business man in Canada, that there will be no room for anything else for a long time but plain, hard, unadulterated 'work.' "

Cardwriting Made Easy

by R.T.D. Edwards

LESSON NO. 9.

NOW that the student has learned how to write a plain show card I think it advisable to give him something of a little more interesting character. I shall therefore present herewith the first lesson in Shading and Shade Mixing. This, when mastered, will enable one to make a very attractive card out of a plain black and white one and yet not render the card difficult to read. This sort of show card is what is called "fancy" but I term it a good sensible show card for a showing which is a little better than the usual variety.

The real use of shading is to make the lettering stand out in relief and also to take the plainness off a card. In the first place one should never have this shading stronger than the letter itself. This would make the card more difficult to read than if the shade was omitted.

Shade Should Not Touch Letter.

There is one very important point that must be remembered in the excution of the shade card. That is do not allow the shade to touch the letter. Ordinarily it must be kept about one-sixteenth of an inch from the strokes of the letter. The white space between the shade and the letter gives the letter the effect of standing out from the white board. See Fig. 1 as an illustration of this point.

In order that the student may learn the work by the easiest method, I have shown the use of the shade on the alphabets and figures as demonstrated in lessons 4, 5 and 6 in previous editions of this paper, I have two reasons for giving this class of letter to start the shadow work. The first is that by this time if you have been diligent in practising the work you should be able to make it better than the Roman alphabet shown in the last two lessons. The second reason is that it is easier to learn to shade a square face letter where no spurs are used than to shade a spurred letter. The lack of spurs makes the shading more of straight lines and large curves. Shading spurred letters is much more complicated on account of the short lines and curves required.

Before procuring with actual work it would be very beneficial if you studied the chart thoroughly first. You will note that I have numbered the strokes on each letter. If you follow these numbers you will find that there will be less likelihood of you smudging the work already done. Also note where two strokes are joined, I have drawn white lines across. This is not to be on the completed work but merely shows where the line should overlap.

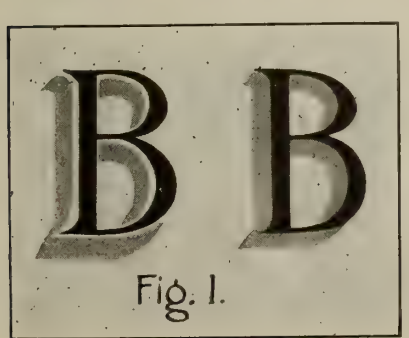


Fig. 1.

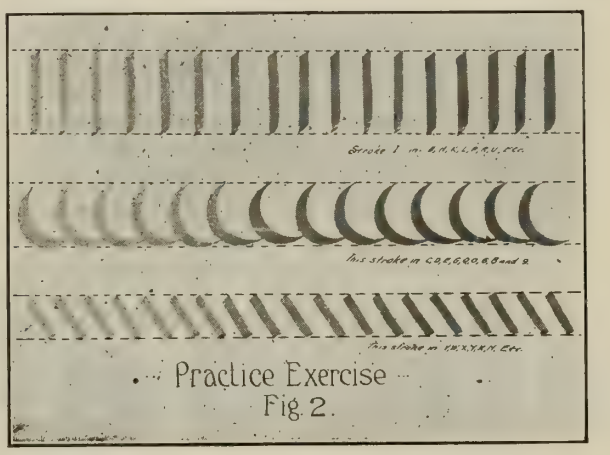
The Lower Case Alphabet.

The shade on the "A" is composed of 6 complete strokes. Care must be taken with the finish of stroke 2. Be careful not to allow it to overlap on the black letter. Stroke 5 should be made quickly to get that free and easy swing.

It takes four strokes of the brush to make the shade



Practice Exercise
Fig. 2.

on "B." Stroke 3 is formed on some of the other letters and is one that should be practised often. The shading on "C" is made very quickly with two strokes of the brush. By lifting the brush properly at the finish of these strokes you eliminate having to retouch them.

"D" is a 6 stroke letter. Stroke 4 is found on many other letters; as stroke 3 of "E" and stroke 6 of "G." Lots of practice on the one will do much good. You are liable to have the same trouble with stroke 1 of the letter E as mentioned about stroke 2 of "A." Do not allow the shade to overlap on the letter.

The main thing in shading the "F" is to get strokes 1 and 4 to appear as one continuous stroke. "G's" shade is all composed of curved lines. A careful practice of all these curves will assist one in the making of other shades. It is absolutely imperative, especially on long stroke leters, to have the shade parallel with the letter. "H," "K" and "L" are letters where this applies.

The slant at the top of stroke 3 of the letter "K" is gotten by turning the handle of the brush to the right.

Stroke 3 and 6 of "M" are sometimes joined up with strokes 4 and 7 and made with two strokes instead of four, but for the beginning it is best to make them separately. The shade on the "N" is similar to that of

the preceding letter. The down stroke will require much practice.

To get the fine lines at the beginning and finish of the shadow strokes on the letter "O," the brush must not be loaded too heavily with color. The shade on the "P" is made with four strokes while the "Q" requires five strokes.

Stroke 3 of "R" appears in other letters as stroke 1 of "S" and stroke 6 of "F."

No. 2 stroke of "S" needs lots of practice, as it is the only one of its kind in the alphabet.

The shade on the "T" requires five strokes. Stroke 4 is the most difficult here. It must be brought down straight until the curved part of the letter is reached and then follow the tail of the letter. This can all be done without lifting the brush but it requires lots of practice. Stroke 1 of "U" is similar to that of stroke 4 of the letter "T" just described. The only difference is that it extends further to the right. The finish of stroke 2 of "V" must be done by turning the brush toward the left. The same applies to strokes 2 and 4 of "W." In order to make them successfully these will require much practice. The shade of the "X" is composed of 6 strokes. 1 and 5 and 2 and 3 must appear as continuous strokes. The five strokes of the "Z" must all be joined.

The Upper Case Shading.

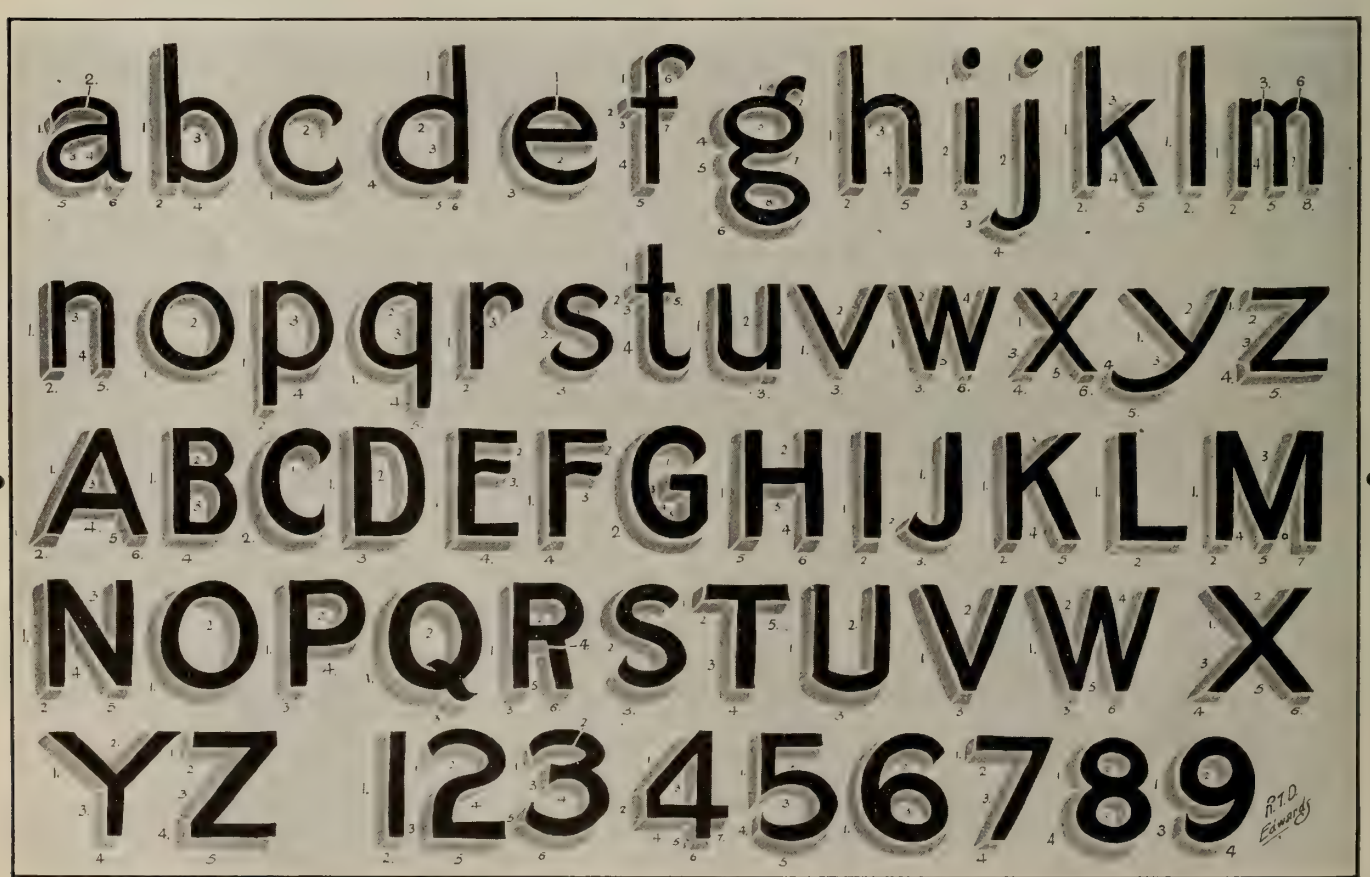
The upper case lettering or making of the capitals has more straight lines than the lower case which makes the shadow easier to do; also the formation of some of the lower case letters is similar to that of the upper case and those will require no further explanation. I will just deal with the difficult points of the letters that differ to preceding ones.

Strokes 3 and 5 of the letter "A" must run parallel with hand stroke of that letter and must appear as one continuous letter. Some writers make strokes 2 and 3 of the letter "B" two strokes each, but it is just as easy to make each with one stroke of the brush. The wavy shade stroke No. 3 of the letters "E" and "F" require a lot of attention and can be used for a practice exercise. The shade of the "G" is made with five strokes; stroke 2 must be made quickly with one long sweeping stroke. It's start and finish must be pointed.

Fig. 3.

Mixing the grey colors—light, medium and dark—is illustrated here.

The start of strokes 4 and 6 of "M" are quite difficult and need much attention. They are made by turning the



brush to the right in order to get the point and as the wide part of the stroke is reached the brush is turned in the usual position. Stroke 4 of the letter "N" is of similar formation. Stroke 4 of "R" is sometimes not necessary.

Shading the Figures .

The figure "2's" shade is composed of five strokes. Note how stroke 2 ends abruptly. Stroke "3's" beginning is slightly curved and pointed.

The "3" is shaded with six brush strokes. Similar strokes to No. 4 is used in many other places in the alphabet and should be carefully practised.

The shadow on figure "4" is made with seven brush strokes. Stroke 1 must be made similar to those of 4 and 6 of the upper case "M."

Practice often stroke 2 of figure "5." This shade appears in many letters and figures. The main thing is to keep parallel with the top line of the figure. The three shade strokes of the "6" can be made very quickly. They seem to work in with the natural swing of the brush.

The all straight shade lines of the "7" need much practice. It is my experience that the straight lines are hard to master and need more practice than do the curved ones. The "8's" shadow is composed of all curved lines and should be easily mastered.

Stroke 3 of the "9" is the only straight shadow on this figure. To avoid the point of the lower stroke of this letter the lower edge of the brush must be lifted.

Chart No. 2 gives a good idea of how to go about the practice work. Rule the blank card out with guide lines to suit the length of the stroke you are going to practise and start with the letter "A." Make all the strokes belonging to each letter and perfect each one before proceeding with the rest.

Shade Mixing.

Shade mixing has become a very important part of show card writing and must be done with the greatest of care. Shade mixed too dark will, when applied, detract from the lettering and shade mixed too light will not have the desired effect of making the lettering stand out. You must also have the color thick enough so as not to dry in blotches and not too thick to flow freely from the brush. Experience is the best and only way to learn. Formulas won't always pan out right. The most popular shading used to-day is grey, on account of it being a very inconspicuous shade. It can be mixed in many different tones, light medium, or dark. All these are mixed from black and white. Place the white in a small vessel and add the black very slowly until desired shade is reached. It must be stirred thoroughly so that all particles are well mixed. See Fig. No. 3 for three shades in use. There are other forms of grey such as "blue grey." This is mixed the same as the other with a small quantity of blue added. This gives a little more life to the show card. By adding a very little red to the plain grey gives you a good warm shading color.

The above shows the effect of shading—an appropriate card just now.

Suggestion for show card suitable for use in stove display. Note that letters are shaded.

These shades should be all kept ready mixed in good working order. Keep well covered when not in use and never let them dry out. Many minutes are wasted if new shading color has to be mixed every time it is needed. Other shades will be gone into in our next lesson.

If you wish to make shading a success you must keep your brushes in perfect condition—that is always flat pointed whether in use or not. The point of the sable must be all even. They must cling together and not split.

The accompanying cards give a fair illustration of the shading put into actual use.

THE EFFICIENT man is he who analyzes himself, striving continually toward an ideal—a standard—which embodies ultimate perfection. He is not satisfied with being adept in a few things, but must be proficient in all. He realizes that the underlying purpose of life is the formation of character, and so far as he succeeds or fails in this respect, the measure of his success lies. Therein, the lives of many of us fall short, for it is better to have aimed at a star and failed to touch the mark than never to have aimed at all.

* * *

FAILURE IS LARGELY a disease. When men begin to fear, begin to worry, begin to be haunted with a foreboding that they are going to fail, they invite the very condition they fear. It is a mental law that whatever is held in the mind becomes the life pattern, and the life processes build in accordance with the design held up to them.

HARDWARE & METAL

CANADA'S ONLY WEEKLY HARDWARE PAPER

Vol. XXVII. TORONTO, SEPTEMBER 18, 1915 No. 38

TO-DAY IT'S go ahead or go behind—keep up or get off the trail. To-day it's the survival of successful men.

* * *

GASOLINE GIVES off a vapor constantly, and air which has mixed with it about ten per cent. of gasoline vapor is more dangerous than gunpowder.

* * *

THE PROJECTILE power of your ambition depends wholly on the vigor of the determination behind it. What you accomplish will depend on the live energy of your purpose, the enthusiasm and willpower you put into your efforts to achieve.

* * *

ADVERTISING is doing a lot to improve matters where business has been bad. There is plenty of money in the country, some of it hidden very securely from view. It takes unusual efforts to get this money into circulation; and advertising is the most effective effort possible.

METALS AND EXCHANGE

IT is significant that the main factor in the weakness of the American metal markets to-day is the exchange problem. While the present high exchange prevails the indications are that the Allies intend to curtail their imports from America; the result is that prices are being reduced. Lead is the outstanding example. Supporting the contention of HARDWARE AND METAL that its advance was due to manipulation rather than to the relationship of demand to supply, further reductions have this week been made, and lead to-day is at the same price as when the war broke out.

The theory might well be advanced here that the lesson of the weakness of the American metal market to-day is that Europe does not intend to pay the exchange and that if the United States does not carry the immense loan now proposed then the effect of the situation will be that American prices will be reduced. In other words, if Americans sell in Europe their selling price will be reduced by the amount necessary to bring their payments to them.

The question of who pays the exchange might be set alongside that time-worn political nut which has never been successfully cracked—who pays the tariff?

RETAILERS LOSE AGAIN

CANADIAN dealers will be interested in knowing that the American Scrip Company is bankrupt—according to reports from Los Angeles which city is given credit as being the birthplace of the "mile in travel for a dollar in trade" alleged business-stimulating idea.

This company's plan, it will be remembered, was to sell the retail merchant coupons which the merchant in turn gave to his customers with purchases at the rate of one mile in travel for each dollar of trade and which coupons the company redeemed in railway and steamship mileage.

The Scrip Company's yearly experience on the Pacific Coast is said to have been so successful that it was decided to expand operations covering practically the entire United States.

A sumptuous suite of offices was opened up in Chicago which was to be known as the general office of the company.

Despite the fact that the merchants who bought scrip paid from $3.00 to $5.00 a thousand for the coupons, they are now being redeemed only at one cent. This is paid in cash at the offices of the bankrupt concern, and it is announced that the money for this purpose was contributed voluntarily by the stockholders. The cash may be had either by merchants who still have stamps on hand which they have not issued to the customers, or by customers who have been collecting stamps.

While it is said that none but the officers of the company know how many are outstanding, it is claimed that fully 1,000,000 scrip coupons still are unredeemed or have just been redeemed on the one cent basis.

A somewhat similar institution has been in operation in British Columbia and Alberta. In Calgary, as announced some time ago, the company operating there was fined for doing business in contravention of the Trading Stamp Act.

THE TRADE PAPER'S FIELD

GOING in advance of the commercial traveler the trade paper creates demand with the retailer. It is the medium between the manufacturer, wholesaler and retailer and consequently occupies a field distinctly its own, being kept out of the hands of customers and bringing the retail buyers and the firms who sell them into the closest possible touch. To the retailer the trade paper is the only means he has of getting an unbiased view of what is going on in his field.

The thousands of circulars and elegantly printed advertising matter often circulated by large houses among their retailers undoubtedly have a certain effect, but the mere fact that it emanates from the jobber or manufacturer has a tendency to belittle its influence and importance. The retailer looks to the trade paper to learn the facts and obtain reliable information with reference to lines of merchandise on their merits, as well as suggestions covering the various branches of the business, designed to show the way to better mercantiling.

VACANT LOT GARDEN

EARLY last spring a movement was inaugurated for encouraging greater production and more extensive use of vacant land in towns and cities for the raising of foodstuffs. In many places retail hardwaremen took an active interest in the campaign and in addition to helping along a good movement, they incidentally increased their sales of gardening tools, seeds, etc. Reports recently gathered from various towns and cities by the commission of conservation indicate that the campaign has been a success. Several cities have handled the vacant lot problem in a systematic manner, and have secured results commensurate to the amount of energy expended. Some, by allowing interest to lag, have been only partially successful. In others, also, circumstances militated against success, in that unemployed men took up the cultivation of vacant lots, and, upon securing employment, neglected them. On the whole, however, the movement can be regarded as a distinct success. No estimate of the value of the product is available, but, judging from the enthusiasm of some of the vacant lot gardeners, the total value is large and there should be an even greater enthusiasm displayed next year.

OBJECT OF ADVERTISING

MANY business firms will be doing or using to-morrow what they refuse to do or use to-day. It is not that the to-morrow thing is not good to use or do to-day, but rather that the perception of its worth is beyond the present-day vision of the man with whom decisions rest.

To-morrow, for example, many a business firm will be using dictaphones and addressing machines, to mention but two things which many are refusing to-day to instal. The need for these devices in their business is as great to-day as it will be to-morrow. The obstacle in the way of their immediate installation is in a great majority of instances an obtuse human being. Time—frequently much time—is required to open the eyes of sleeping men.

One of the burdens or objects of advertising is to awaken sleepers—to arouse them from a smug content, from intellectual torpor, and from physical and mental laziness. So long as humanity lasts there is likely to be a resistance to new ideas and suggestions, and the overcoming of this resistance will be an unavoidable obligation on those with something to sell.

COURT FAVORS PRICE MAINTENANCE

THERE have been numerous test cases from time to time in the United States on whether the manufacturer of a proprietary or patented article has the right to fix the price to the consumer or not. Some of these have resulted one way and some the other. Of late, however, it would appear that the courts of the United States are becoming more and more favorable to the price maintenance plan. This is evident by the recent decision of a Judge in the United States District Court at Chicago, who upheld the plea of The American Graphophone Co. against the Boston Store of Chicago, a large department establishment in that city.

The Boston Store had entered into an agreement with the Columbia Graphaphone Co., selling agents for the American Graphaphone Co., agreeing to maintain the established prices on phonograph records but instead of adhering to the contract the department store advertised and sold records priced at 65c and 75c for 35c. Suit was brought against them to compel them to stop the price cutting and the court, in substance, held that the manufacturer of a patented article has the absolute right to govern the price at which his product is to be sold to the consumer when such product is sold to the retailer under a fixed price contract. The court also declared that the Sherman law did not apply in such a case.

While this refers to a patented article there is no doubt that it will be considered a precedent in so far as a proprietary article put out by a foodstuff manufacturer is concerned. It recognizes the legality of a price-fixing agreement between manufacturer and retailer and upholds the theory that property in the form of patents constitutes a form of monopoly which is authorized by law in the United States. Following as it does the recent decision in the Cream of Wheat case this decision is one that will further strengthen the position of the adherents of price maintenance and it is likely to have considerable bearing towards the passing of the Stevens' Bill at the next Congress which is purposely designed to legalize price maintenance.

What Other Papers Say

Items of Interest From Other Papers—In Each Instance Credit is Given to the Paper From Which the Item is Taken—Go Where Money is—Possible Scarcity of Hardware—Outlook Encouraging.

GO WHERE MONEY IS

From Printer and Publisher.

ONE of Toronto's largest wholesale hardware establishments has a fleet of twelve automobiles for the use of its travelers. The cars are used by these men to reach country stores which aforetime were rarely or never called on by them. In days past the salesmen traveled altogether by rail, making say a dozen towns or cities a week. To-day these men visit 25 or so places in a week.

All told there are in Canada, according to a recent calculation, 3,126 hardware stores. Of general stores there are 19,101; that is, the general—which means country—stores exceed the number of hardware stores by 16,000; or to put it another way, there are six general stores in Canada for every hardware store. The same proportion exists with reference to boot and shoe, clothing, drug, dry goods, and jewelery stores. There are eleven times as many general stores as furniture stores, and thirty-five times as many general stores as piano and music stores. There are 4,000 more general stores in Canada than there are grocery stores.

The conclusion is obvious; the manufacturer or jobber who neglects the country retailer is doing only a portion of the business that he can do; and the advertiser who fails to cultivate the rural community field—where greatest wealth and purchasing power are found—has not yet entered into the fullness of his opportunities.

Very often the end of the rainbow with its pot of gold is found, not in a gilded city, but in a plain homespun country town.

* * *

POSSIBLE SCARCITY OF HARDWARE

From the Ironmonger.

A GRADUAL contraction of activity in the production of ordinary commercial products is the necessary corollary of the present increase in the supply of armaments, since for a number of years this country has possessed no surplus of manufacturing facilities, and as regards hardware and metal products generally the output has never done more than keep pace with the demand. This condition has, of course, militated against the accumulation of stocks. The appeal for more and still more munitions has met with a response that must be highly gratifying to the military authorities, but its success was made possible only by a wholesale withdrawal of labor and plant from the ordinary trades of the country. The inconvenience of this transfer of manufacturing activity from peace to war commodities has probably been more fair in the hardware branches than in any other section of industry, because hardware goods consist so largely of metals. A scarcity of such goods has now arisen, and as the contraction of output is certain to become more and more pronounced so long as the pressure for munitions continues, the predictions of a failure in the supplies of many manufactured necessities before the end of the year should not be treated lightly. The outlook is causing a good deal of anxiety in the distributing trade, because ironmongers appear to be in some danger of being unable to obtain a sufficient quantity of the goods whose sale forms their main source of income. At no period of the war has so much hardware been bought as at the present time. For more than two months makers have been receiving a torrent of orders of such aggregate magnitude that it cannot be explained by the exceptionally large spending capacity of a considerable section of the public which is benefiting by the war expenditure, nor by the necessity of ordering a long time ahead. There is strong evidence that some of the large merchants are buying up almost anything that can be got in the shape of hardware in preparation for a time of acute shortage, when manufactured goods may command famine prices. A feature of this buying is the indifference which the buyers show to considerations of pattern, design, or even price. In fact, there exists a ready market for stocks of any description of cutlery, spoons and forks, tools, and many other hardware goods, and large quantities of out-of-date wares, which have been lying for years on makers' shelves, and were regarded as unsaleable, have lately been cleared out at high prices. Orders are also being placed in spite of the warning that they cannot be filled within twelve months.

* * *

OUTLOOK ENCOURAGING

From Financial Post.

FROM British Columbia reports as to mining industry are exceedingly promising, the production of base metals for war materials being on the increase. At the same time the lumber men are feeling the pulse of quickening business. At the other end of the Dominion on the Atlantic Coast, business is brighter and prospects are more hopeful than has been the case for some months.

In the central provinces, especially at centres like Montreal, Toronto, and Winnipeg, the demand for commodities is improving. At the last named point, however, it is not so marked as in Toronto and other Eastern points. Possibly the cause of this is that over the entire West the population is absorbed in handling unusually heavy crops. It is this great fact that is stimulating business throughout the entire Dominion. Reports to hand indicate that the yield will be a little higher than generally expected, although some estimates have been made which appear to The Financial Post to be quite extravagant. Some men of conservative judgment now anticipate that the crop will reach 225,000,000 or 230,000,000 bushels. Sir William Mackenzie and other Canadian Northern authorities that have given the situation some attention during the last few days state that the grain crop will aggregate approximately 580,000,000 bushels. These estimates may be taken to indicate that the crop is an excellent one. As to the actual yield in bushels it would be impossible to arrive at anything like an accurate estimate until threshing has progressed somewhat further. Meanwhile business has become more hopeful as the result of the abundant crop.

Great Success of National Exhibition

Last Year's Attendance Exceeded by Over One Hundred Thousand—Many Splendid Exhibits by Manufacturers — Attendance Shows Spirit of Canadian People.

Crowds in front of the entrance on one day of the great Canadian National Exhibition.

THE great Canadian National Exhibition for 1915 has passed into history, but the hundreds of handsome exhibits of various products allied with the hardware trades, which were on display during the two weeks of the Exhibition, will have a lasting and beneficial effect upon the many thousands of people from all parts of Canada who visited the exhibition. The attendance this year numbered 864,000, exceeding last year's attendance by over 100,000.

In "Patriotic Year" there was an appeal to the sentiment of the general public, which met with a hearty response, indicating the spirit of optimism which pervades Canada.

In the face of the obstacles which confronted them, the directors of the exhibtion feel that the success this year is the greatest ever, even though the attendance did not reach the million mark, aimed for.

The Canadian National Exhibition is national in its scope. It is said to be the greatest annual exhibition in the world.

Many people from the United States and other countries are annual visitors. That Canadians are greatly interested in the exhibition is clearly indicated by the huge attendance each year. When an annual event reaches a state where there are 864,000 paid admissions in twelve days, it can truly be called gigantic.

One of the added atttractions at the exhibition this year was the presence of an overseas contingent upon the grounds, and the model camp where visitors could see soldier life, including bayonet practice, trench storming, etc.

War trophies captured from the Germans were also on exhibition and attracted a great deal of attention.

KEEP IT ON FILE

This is an issue that every reader of *Hardware and Metal* should keep on file for future reference. It contains views of the exhibits at the Canadian National Exhibition of some score of manufacturers all of whom went to a great deal of expense and care to present attractive showings. Each illustration shown in this issue contains some excellent display suggestions.

Several things contributed to the success of the exhibition this year, the good weather, the excellent exhibits, the attendance and the whole-souled patriotic interest of the Canadian public.

Among the features of the Exhibition, as usual, were the splendid exhibits of the manufacturers. In succeeding pages will be observed reproductions of a large number of these. While the Exhibition may be over, the effect of these exhibits and demonstrations upon the people of Canada will long remain. They mean that many new lines have been introduced to the general public and that the reputation of many well-known lines that have been on the Canadian market for years have been still further enhanced in the minds of the public.

And the fact must not be lost sight of that the visitors at the Exhibition were not all from towns and cities. Many thousands of the visitors are agriculturists; in fact, one day each year is called "Farmers' Day." It is doubtful if there is a community in any district in Canada, that was not well represented by visitors at the Exhibition.

Many manufacturers in their desire to place their products before the Canadian public, displayed handsome exhi-

View in grounds of Canadian National Exhibition.

bits in the buildings provided for the purpose, and in this way not only placed their wares before the visitors to the exhibition, but accomplished a great deal of missionary work which will, during the coming weeks and months, reflect to the advantage of retail hardware merchants in all parts of the Dominion.

On succeeding pages are shown reproductions of a number of the exhibits of manufacturers who have placed their goods before the public and thus co-operated with the retailer in his endeavor to reach the consumer.

This co-operation, if properly followed up by the retailer, will have widespread effects, and it should be remembered "that the flood, taken at its height, leads on to fortune." Now is the time when this co-operation should be taken advantage of to the fullest extent.

It is needless to state that the exhibits of the manufacturers were exceedingly attractive. A glance over the illustrations shown in the following pages will readily convince one of that. Manufacturers went to a great deal of expense to present their goods in the very best manner to the Canadian public, and they undoubtedly succeeded.

Another point to remember is that in each of these illustrations will be found an idea for a window display on the part of the retailer. The window is one of the most valuable salesmen in the retail store. Next to personal salesmanship it will undoubtedly sell more goods than any other medium, providing, of course, it is properly arranged.

From the exhibits reproduced here, retail merchants can also get some excellent suggestions which may be used in preparing booths and exhibits for local fall fairs, many of which will be held in various parts of Canada during the next couple of months, and at which a great many retail hardware firms will be represented. Attention should also be directed to the fact that all the exhibits at the exhibition were in charge of trained men who demonstrated and explained the uses and good qualities of the various lines, to thousands of visitors.

By their selling talks and the distribution of advertising material these men have interested many prospective customers, who in turn will visit hardware stores to make further inquiries and purchases. Retail hardwaremen and their salesmen during the next few weeks will meet many customers who will refer to goods they saw at the Canadian Exhibition and it is very important that hardwaremen should be prepared to handle all enquiries intelligently and promptly.

View in grounds of Canadian National Exhibition.

BEATING THE MAIL ORDER HOUSE

(Continued from page 37.)

pearing in the local paper?" was asked by Hardware and Metal.

"Well," said Mr. Thornton, "that was easy to know. You see I made statements in each ad to the effect that I had a better fence for less money than could be obtained by sending money away from home.

"Well, when you make positive statements such as that you have to have something behind your statement, as the farmers are always open to conviction, and so they inquired about our fence when in town. Some of these farmers placed their orders later when I called to see them. At the close of the first week's business I had taken orders for almost one ton of barbed wire, besides the business I had done in the woven wire fence. This was very encouraging for the first time out, and I began to realize that it was not because an agent had a smooth tongue that he secured the orders from the farmers, but more so because the farmers were in the market for the goods and would invariably buy if shown that the goods and prices were right. I did not have to cut prices. I had bought my fence right. I had the goods, and the farmers saw that my product was a good one, and this, together with the fact that the price was right, invariably had the desired effect on my prospects. At the close of my campaign as a fence agent I had sold almost two car loads of fence, or a little over 3,500 rods more than I sold the previous year.

"In addition to the sales of fence wire, I sold over half a ton of fence staples, which means a nice item itself. I also sold several sets of wire stretchers."

The "ad" reproduced here was taken from the local paper and shows the style of the advertising done by Mr. Thornton during the time he was on the road as a fence agent. The fence was handled at a minimum of expense, as most of the farmers loaded from the car.

Reproduction of photograph showing the very practical booth of Ronuk Products.

Practical Display of Ronuk Products

THE very practical exhibit of Ronuk products was especially interesting to housekeepers, as anything that is in the nature of labor saving usually is. The various products manufactured by "Ronuk," Limited, were neatly displayed around the booth, while the chief point of interest was that of a practical demonstration of these products. A section of the floor of the booth was inlaid with hardwood and on this "Ronuk" Floor Wax was demonstrated very satisfactorily. The new Ronuk Liquid Wax was also demonstrated. This Liquid Wax produces the same lustre as the paste wax, and is not so hard to apply. The liquid is sprinkled on a cloth, which forms a cover on a new style polishing device put up by Ronuk, Ltd., and is rubbed over the floor in much the same way as if the floor were merely being dusted. The special feature of the Liquid Wax is the fact that a heavy polishing brush is not required to produce the necessary gloss, but the light device sold especially for the liquid is all that is required. The action of this polisher is much the same as the polishing brush, only that the Ronuk Floor Cleaner and Polisher does not require the strength to operate. A child can polish the floor with this new device. It is also appreciated by those who have used it on account of simplifying the work. It is not necessary to kneel down to lay the wax on the floor, as the cloth that spreads the wax is removable and another polishing cloth is adjusted in less than one minute. Those in charge of the display were kept very busy demonstrating and taking orders to be delivered by the regular dealer to the customer's house. This is the second annual exhibit made by Ronuk, Limited, and the publicity gained by exhibiting at the Canadian National Exhibition should mean an increase in the amount of "Ronuk" products sold by the retail dealer, as the hundreds who visited the display each day expressed their intention of using this wonderful polish.

Excellent display of Jewel Stoves and Ranges by Burrow, Stewart & Milne Co.

THIS year's display of stoves at Toronto Exhibition was probably the finest and most complete ever seen there. The disturbed conditions resulting from the war do not seem in any way to have affected the displays made by the various Canadian stove manufacturers. What was lacking in quantity, if anything, was made up by the class of goods shown in the new designs and handsomely finished goods that are everywhere in evidence. "Better than ever before," is the only phrase that adequately describes the "Jewel" exhibit of the Burrow, Stewart & Milne Co., Ltd., of Hamilton. New goods are shown in practically every branch of their business, steel ranges, cast ranges, heaters, and especially in the well-known line of "Jewel" gas ranges. The reproduction shown here gives some idea of the class of goods displayed. In general it may be said that in point of finish the stoves were certainly at their best, and had just enough trimmings to make them look attractive and give a rich, handsome appearance.

Every line shown was certainly most tasty, both in quantity and in the arrangement. The important matter of workmanship, and quality of material used in their construction, is the mainstay of "Jewel" Stoves. The success that has attended the firm in their long experience of over fifty years has been brought about by making goods that are right in every detail. Quality first, then price, and it is generally accepted that the price is right. There is no skimping with "Jewel" Stoves; the weight of the castings and the gauge of the steel used is what it should be in every case. There is no substituting of sheet steel, where cast iron should be used. Sheet steel is all right when used in the proper place and of the proper gauge, but otherwise it is all wrong and liable to rust or burn out long before the life of the stove should be over. The best evidence that can be given to bear out the foregoing statements is the fact that the firm are still supplying repairs for ranges, cook stoves and heaters made from 1880 to 1890 (from 25 to 35 years ago), old "Jewel" ranges, Victory base-burners, etc.—some of the older dealers will remember them.

Most prominent among the lines shown this year are the Royal Jewel and the Northern Jewel Steel Ranges, and the Social Jewel cast range with and without gas extension. The variety of heaters both for coal and gas is also up to the minute. Jewel gas ranges have been transformed, and are certainly in the front rank for finish, good features and variety of styles. Burrow, Stewart & Milne are also manufacturers of scales, and a large variety are shown in the exhibit. Designs of all kinds were to be seen, including the new Bathroom scale with new style crown beam and measuring rod. Also white enameled nursery scales, an improved article for use in the nursery for weighing infants.

Parcel Post scales and a new 25-lb. Household Scale were shown along with other lines. The Burrow, Stewart & Milne Co. was established in Hamilton in 1864, and incorporated in 1898. John Milne is the president and general manager.

The company has branches in Toronto, Montreal and Winnipeg, and are well known to the Canadian hardware and stove trade. They report that indications for a brisk fall trade are excellent, and also expect a normal season's trade.

Fine exhibit of stoves and heaters by The Thos. Davidson Manufacturing Company, Limited.

THE THOMAS DAVIDSON MFG. CO., LIMITED, EXHIBIT.

THE point of vantage in the Stove Building occupied by the Thos. Davidson Mfg. Co., Limited, proved to be one of the most interesting spots in that building. People from the city and from the farm stopped to examine the stoves on display; the children stormed the booth to get the **souvenirs** from the smiling men in charge. After regular rushes of the "souvenir hunters," those in attendance would get down to business and explain to the many inquirers the advantages and special features of the various lines of stoves and ranges, and many householders (both from the city and from the country) looked over the entire line each day, and were delighted with the splendid assortment shown.

Much interest was shown by the visitors from the country districts in the exclusive line of coal or wood ranges that were shown at the exhibit. The display was of great value, and proved why it is that users of the "Davidson's Stoves" are so thoroughly pleased with them; and it also enabled the stove dealers to get a better idea of the new and splendid lines which the company are bringing out.

The line of "Premiers" that were shown was exceptionally fine, and many favorable comments were to be heard by those who visited the exhibit. The "Premier" family comprises:

"Premier-Marathon."
"Premier-Leader."
"Premier-Royal."
"Premier-Chieftain."
"Premier-Cordova."
"Premier-Argus."

"**Premier-Marathon**" is a range that has stood the test of time; the body is made of extra heavy polished Wellsville steel, and is heavily insulated with sheets of asbestos mill board. The fire grate and linings are exceptionally heavy, insuring durability, and is most economical on fuel. The oven is made of heavy steel strongly braced to prevent buckling or warping. The "Premier-Marathon" can be supplied in several sizes: square or with reservoir, with tea shelf, high closet, or with the attractive Persian closet.

"**Premier-Leader,**" as the name indicates, is a "leader" with the people; it is a very attractive range, made of heavy material; is most economical on fuel, and is sold at an exceptionally moderate price, which was a surprise to the many inquirers. This range can also be supplied in various styles and sizes.

"**Premier-Royal**"—the range that will last a lifetime. It is a high-class cast range, without an equal, and is very popular. The material used in its construction is the very best: the oven is specially ventilated, carrying off all cooking odors. This range particularly appealed to people from the country, who demand the very best in a cast range.

The "**Premier-Chieftain**" is a moderate-priced cast range, and is exceptional value. This range is particularly attractive, and appealed to the residents of Toronto and other cities and towns, where kitchen space is a consideration. This range can be supplied in two sizes and the various styles.

The "**New Tiger**" **Heater was also featured very strongly,** and words of praise were to be heard regarding the appearance. It is a splendid heater for all fuels; the body is made of heavy polished steel, and the nickel trimmings are very attractive. This "**Tiger Heater**" is suitable for the home, store or office, etc.

There was a splendid display of their well-known "**Beaver**" brand, Quebec style heaters, and they were admired by many of the visitors.

In addition to the splendid line of stoves and ranges, there was on exhibit the "**Sterling**" **Washing Machine,** manufactured by the same firm. The interest that was shown by the visitors in this all metal washer was most pleasing to those in charge, and the many features regarding the Sterling were repeated many times during the Exhibition.

The "**Frost River**" Refrigerator was another interesting feature of the exhibit. This all metal refrigerator is widely known, and is much superior to any other on the market.

Neat display of stoves and heaters by The D. J. Barker Foundry Co., Limited.

CHAMPION SUMMIT RANGES.

THE D. J. Barker Foundry Co., of Brighton, had a display of stoves and ranges which was always a centre of interest. An outstanding feature was their Champion Summit ranges with syphon flue, for which strong claims are made as a coal saver and perfect baker and heater. Certainly it would appear that in these ranges the stove dealer has one of the most convincing talking points. Nine women out of every ten on inspecting a range will ask what it can do in the matter of heat regulation, whether in baking it is necessary to maintain a full capacity fire, and what amount of fuel is required in order to secure efficient service. Is this range always ready to bake? is the question that has caused much experimenting, and the Barker people claim to have solved it in a most practical way. They stand behind their Champion Summit ranges and guarantee them to be perfect in construction, and to be the quickest and best bakers made.

The syphon flue secures full efficiency of heat for the amount of fuel consumed. It pours the heat direct into the oven, keeps the heated air in constant motion, equalizes the temperature, making a quick, uniform baker without special fire. It is claimed that the syphon flue saves one-third of the fuel by this method of heat direction and circulation. Dealers will do well to get particulars of this range.

The Silver Summit, which also features the Barker line, is a range made of a special iron, guaranteed anti-rust and not to pit. The qualities of this metal are such that no stove or furnace in which it has been used has ever become unserviceable because of corrosion. Dealers can recommend this stove because, lasting many years longer, it costs less in the end.

One of the strongest points in the Champion Summit line is the fact their manufacturers guarantee the fire backs of all ranges for five years. Stove men will recognize in this definite provision a solution to one of the most vexed problems in their business. It further demonstrates the confidence of the makers in their stoves.

The D. J. Barker Foundry Co. will shortly move from Picton to their new factory in Brighton, where they will have greatly improved facilities. The manager, J. J. Hickey, is one of the most practical and thoroughly experienced stove builders in Canada to-day—a fact that is being demonstrated by the showing already made by the Barker line.

The Pearl Summit is made in four sizes, with ovens up to 20 x 20, and supplied with low shelf, high shelf, high closets, nickel or glass oven doors. The very best material is used in its construction, and it is in every way a desirable range for the dealer to include in his stock. It is a range that meets the problem set up by scientists that fully 50 per cent. of fuel goes up the chimney as waste through imperfect combustion. The solution is the syphon flue—a feature which is creating a strong demand.

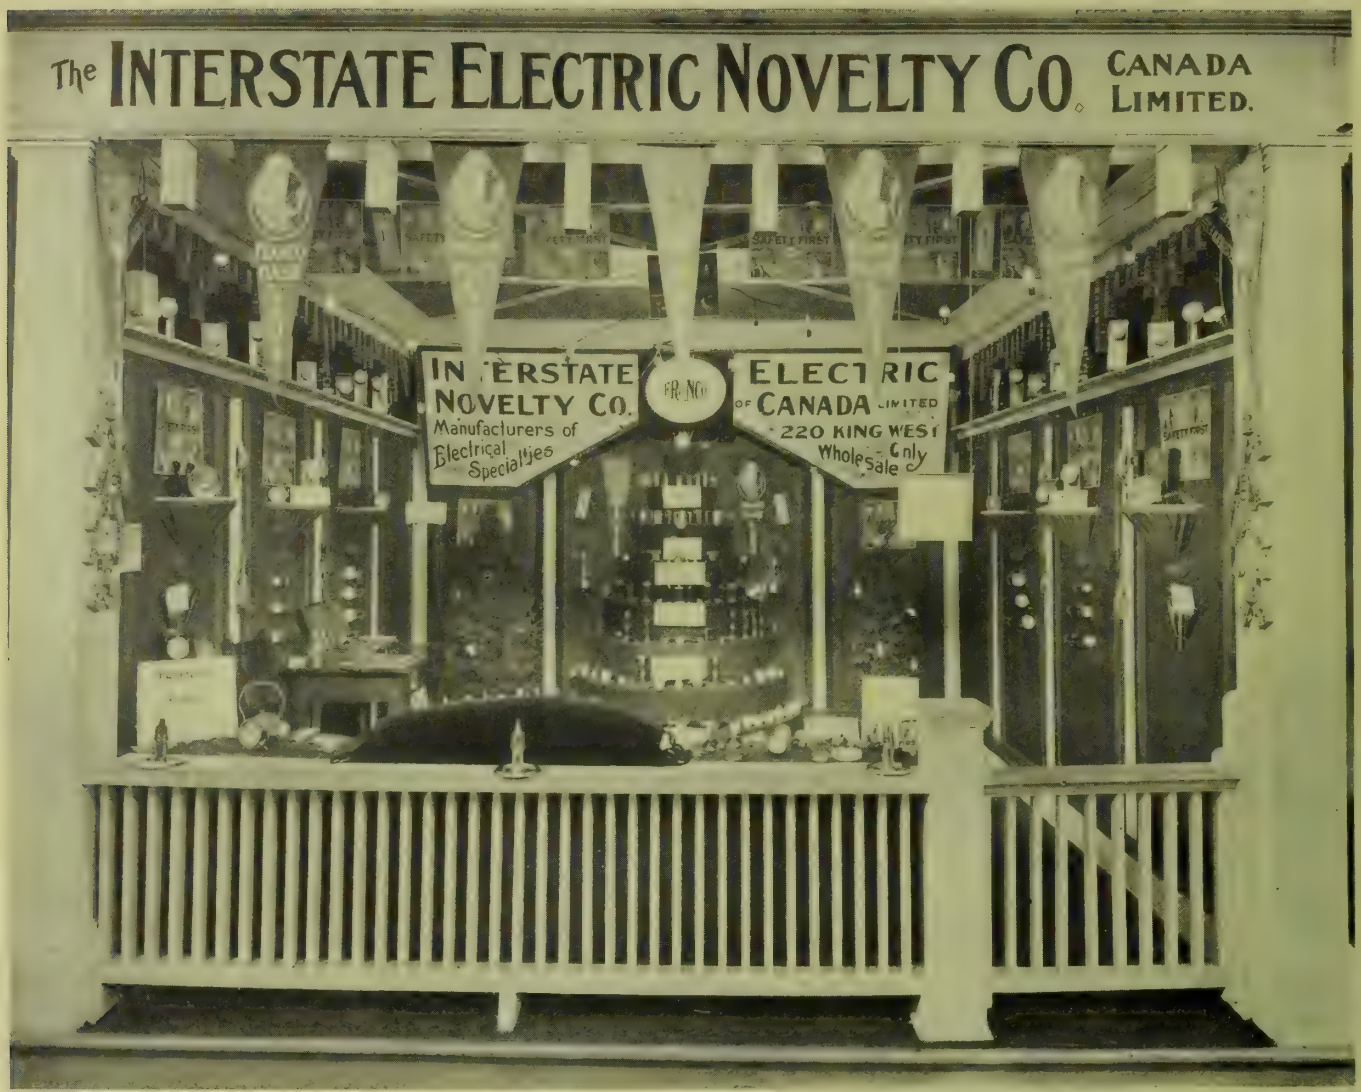
Another feature of the D. J. Barker display was the Brighton Challenge, a combination coal and gas range. Each section being distinctly separate, yet the whole is so compact that the range bulks no larger than an ordinary gas range. The oven is also equipped for gas. For districts where the natural supply cannot always be depended upon, there can be no better heating or cooking equipment. Its construction indicates that the builders have a sound, practical knowledge of requirements, and this in itself explains the interest shown in the stove during the two weeks of the Fair.

An interesting display of rubber products by the Canadian Consolidated Rubber Co., Limited.

CANADIAN CONSOLIDATED RUBBER CO.

THE extent to which the Canadian Consolidated Rubber Co. figures in supplying rubber goods to the people of the Dominion was well exemplified by their large, varied and handsome exhibit at the Canadian National Exhibition. There were to be found all the important rubber products that are sold in our stores to-day, also many lines that the stores do not carry. Much interest was manifested by the crowds of Exhibition visitors around the Canadian Consolidated Rubber Company's booth, and advantage was taken by these visitors to learn first-hand information from those in charge of the booth how the renowned products for which this company have become famous are made. The large biscuits or rolls of unwashed rubber on display were the cause of many inquiries, and as the tale was unfolded to the curious ones, from the first stage of the rubber as it comes from the huge trees in the Brazilian forests and through the various stages of manufacture to the finished products, many expressions of satisfaction were to be heard. Dealers who visited the booth found a most interesting and educative exhibit, and there is no doubt that they were well repaid for their visit. The booth was tastefully decorated, long rubber strips in the second stage of manufacture being used for festoon purposes. Plants, ferns and flowers added to the attractiveness of the booth. Inside the booth and behind the table showing the crude rubber were three show cases containing finished rubber products. One case contained a good assortment of drug sundries, such as hot water bottles, syringes, rubber brushes, etc. The centre case contained a well-assorted stock of rubber footwear, various styles of rubbers, overshoes, etc., which were shown to good advantage. A display of the celebrated Fleetfoot Brand of sporting shoes was exhibited in the case to the left, proving of interest to many. The many styles shown are suitable for all occasions and all sports, and it was a revelation to many who viewed the display to see such a splendid assortment. Behind the show cases was a very complete display of rubber goods of a mechanical nature. Firemen's supplies and hose of all description were shown. A good display of raincoats was also shown, also sportsmen's waders, military boots, rubber belts and other sundries.

W. S. Martin, who was in charge of the Exhibit, was one of the busiest men at the Exhibition. His duties, explaining the process of the manufacture of rubber, kept him busily engaged giving out the information to the constant crowds in front of the booth.



Excellent display of electric novelties by the Interstate Electric Novelty Co. of Canada, Limited.

SUPERIOR DISPLAY OF ELECTRIC NOVELTY CO.

THE splendid assortment of electric novelties shown by the Interstate Electric Novelty Co. of Canada, Ltd., was commented on by everyone who saw the display. Novelties in every conceivable form were to be seen, and not only novelties, but scores of very useful articles were to be found in the exhibit and demonstrated how the electrical business has advanced in recent years.

In the foreground of the booth a black velvet cushion showing various designs in tie-pins was to be seen. These pins were connected with a battery, and those in charge of the booth attracted much attention by illuminating the pins.

Not the least of attractions was that of a small Teddy Bear whose eyes became illuminated by simply pushing a small button. A complete line of the celebrated "Franco" flashlights was also on display. Flashlights suitable for every purpose and every person were on view, and it was interesting to see the many excellent features that are now shown in these useful flashlights. Everything from an imitation cigarette case to a farmer's lantern was displayed.

Special interest was shown in the Wireless Non-short-circuit Tubular Flashlights. These tubular Fibre Flashlights are the only fibre flashlights on the market that will not short-circuit and light when in contact with metal.

They were shown in nickel and black leather finishes. The telegram sent by the Company from the Panama-Pacific International Exposition stating that the Franco line of flashlights had been awarded the gold medal was on view. The gold medal awarded was also on view later, but not so prominently as the telegram.

An excellent line of bicycle, motorcycle and carriage lamps were on display and several dealers placed orders for them at the booth. A very special and attractive catalogue is issued by the Interstate Electric Novelty Co. for the trade. It is gotten up in loose-leaf form, and contains the most complete line of electrical devices ever offered to the trade. W. G. Graham and J. D. Bryan, in charge of the booth, met a large number of hardware dealers during the Exhibition and a very satisfactory business resulted from the exhibit.

With the thorough distributing arrangements dealers can secure Franco Products in the larger cities of the Dominion and save considerable in expressage, besides avoiding loss of time in getting material.

A full stock of electrical supplies as were on view at the Exhibition are carried at 220 King St. W., Toronto.

The Hamilton Gas Mantle Co.'s practical booth at the Exhibition.

Hamilton Gas Mantle Company

ONE of the most interesting and instructive exhibits at the Exhibition this year, was that arranged by the Hamilton Gas Mantle Co., Ltd., of Hamilton, Ontario. The crowds which gathered around their stand were shown the sewing, dipping, seasoning and hardening of a mantle, both in the inverted and upright styles.

These mantles were all treated and manufactured under the "Laddite Process," the exclusive rights of which, for Canada, are controlled by this company.

The webbing used in the manufacture of the Laddite mantles is what is known as ramie, which is obtained from the fibre of a grass grown in India. This webbing is impregnated in a solution of chemicals, modelled, and then the fibre is entirely burnt out on the seasoning machines, under high-pressure gas.

It was shown by the company that the mantles, when run through and seasoned under the "Laddite Process," were more durable, and the ash became quite wiry. They demonstrated this by tossing the mantle about, and vibrating it several hundred times on a specially constructed machine.

They also demonstrated the use and manufacture of mantles for special systems, such as acetylene-air gas, gasoline, and high-pressure coal gas.

Although the Company has been manufacturing only twenty months, they have now introduced their mantles into all the principal gas companies in Canada. They have also established large connections in the West for their soft rag and loop mantles, for the gasoline hollow wire systems.

The Company have already been awarded two Gold Medals for the excellence of their product.

Mr. Wm. H. Thorpe, their representative, who was in charge of the Exhibit, very gladly explained the process to all interested parties.

THE ASBESTOS MFG. CO.'S DEMONSTRATION BUNGALOW
AT THE NATIONAL EXHIBITION GROUNDS

ASBESTOS PRODUCTS AT THE FAIR

The products of the Asbestos Manufacturing Co., Drummond Bldg., Montreal, are very much in evidence at the Toronto Exhibition — in fact they are a particularly permanent part of it. The Manufacturers' Building, Women's Building, Police Station, Fire Hall and the huge new Cattle Arcade are all roofed with A S B E S T O S L A T E Cement Shingles.

To demonstrate other Asbestocement Building Materials, the Company erected on the Grounds last year, the neat little Bungalow illustrated. Asbestoslate was used for the roof and for part of the walls. ASBESTOS BUILDING LUMBER in half-timbered effect completes the outside walls, and is used around the verandah. The interior of the Bungalow is lined throughout with Linabestos, and shows it plain, painted and papered.

Linabestos offers all the advantages of other wall-boards, and another most important one which the rest all lack—it is absolutely fireproof, and will check instead of feeding a blaze that starts indoors.

Linabestos is made of Asbestos and Cement, in stiff, solid sheets 3-16 inches thick, 42 or 48 inches wide, and 4 or 8 feet long, so that it will fit the standard studding and joist spacing. It is attached with either screws or nails, panelled over the joists if desired, and finished with paint, tint, burlap or wall paper. It cannot crack nor come loose, and makes walls and ceilings that are both attractive and permanent.

Linabestos is particularly suitable for damp places, such as basements, laundries and bathrooms; for repair and alteration work; and for interiors of garages, tool-houses and up-to-date stables.

Every hardware man who is looking for his share of the building trade should certainly know and sell LINABESTOS. It is "Made in Canada" in the Asbestos Mfg. Co.'s big plant at Lachine, P.Q.

Superior display of "Shouperior" goods by the Autographic Register Co.

THE DISPLAY OF THE AUTOGRAPHIC REGISTER COMPANY OF CANADA, LIMITED

WHILE this company has been established and doing business in the Dominion of Canada for the past seven years, it is only their third successive year as exhibitors in the Canadian National Exhibition at Toronto, and as they are a very progressive concern, they have grown in leaps and bounds, and expect to be regular exhibitors every year hereafter.

The increased growth of this concern has made it necessary to re-organize their commercial and manufacturing departments to meet the demands of the trade, which has recently been done quite successfully by Mr. A. G. Pierce, formerly the efficiency engineer of the mother company, the original inventors of Autographic Registers, doing business in the States more than third of century.

James C. Shoup was the original inventor of the first Autographic Register known to man, and from the superiority of the product over the old-style pad and pencil method, the two words "Shoup" and "Superior" were coined into one word, "Shouperior," and registered in the Patent Offices of both the United States and Canada as the company's trade mark, therefore all systems, devices, etc., sold by this company are known to the trade as Shouperior.

There are more than 100,000 of these devices in use to-day in a hundred different styles and sizes, and used in the offices for facilitating the business systems of more than 600 different kinds of businesses, wherein the devices are employed on a variation of more than 300 different kinds of systems, and there is no business system in existence requiring the execution of a record in multiple sets that cannot be greatly facilitated by the adoption of some one Shouperior device or another.

The particular features of the device are the facts that record blanks are printed and prepared in roll form, as are also carbons, which are so situated in the device that their action is transversely to each other. This is precisely what Shouperior does and in the most economical and efficient manner possible.

A special force of experts have worked on a problem for years, with the result that they are now rewarded in their new and latest device called the "Shoupaligner."

The "Shoupaligner" is a device that delivers the forms in perfect alignment and registration with each other, and at a predetermined distance regulated by punch holes in the form used for filing purposes; or, in other words, an exact measured delivery, which means that the device overcomes all possible faults in the printing of roll stationery and controls everything in absolute uniformity. The device is made foolproof, and cannot be operated wrongly, and while extremely simple in mechanism, it accomplishes wonderful results.

The new device is now being manufactured and will be on the market in the course of a few months, and all concerns interested in economy and efficiency pertaining to their clerical routine will do well to enquire of the company for further particulars regarding this newer device for business systems in general. They are represented in all principal cities of the Dominion, having general office and factory at 10 St. Peter street, Montreal.

The **"WEAR-EVER"** display at the Canadian National Exhibition attracted great attention for the same reason that a display in your window will attract attention.

BECAUSE

"WEAR-EVER" utensils are the most extensively advertised aluminum utensils on the market to-day.

"WEAR-EVER" utensils are made in the largest and most modern factory of its kind in Canada.

There are over one hundred thousand satisfied users of **"WEAR-EVER"** in Canada.

There are **"WEAR-EVER"** utensils for every purpose—more than 500 shapes and sizes.

Aluminum utensils are NOT "all the same."

The enormous pressure of huge rolling mills and stamping machines makes the metal in **"WEAR-EVER"** utensils harder than the metal in utensils made in any other way.

Metal that cracks or tears under the strain is rejected. Only the best metal can stand the strain—and that is the kind you get in **"WEAR-EVER"** ware.

Replace utensils that wear OUT with utensils that **"WEAR-EVER"**

Attractive display of O-Cedar Mops and Polish.

O-CEDAR MOP DISPLAY

THERE were large crowds of women around the booth of the O-Cedar Products from early morning until late at night. There was no place under the grandstand that attracted more attention than did the booth where the popular polishing mop was exhibited. When it is a question of reducing labor in the house you can usually depend upon the women to become interested immediately. There is no invention of recent years that has done more to lighten the labors of housework than the O-Cedar Polish Mops. The many excellent features of this mop were effectively demonstrated at the exhibit, and thousands of women who have not already used this wonderful mop signified their intention of so doing at an early date. The demonstrators in charge of the booth showed the interested visitors how to use the mop by actual demonstration on a hardwood floor. There were a number of new features in the exhibit this year, the mop being shown in two styles, triangular and round, and each style was also shown in two sizes. Many pleasing remarks were to be heard when the demonstration had shown the several features of the mop and polish. Those who had not yet tried the O-Cedar Mop were surprised to see it actually clean, dust and polish and impart that high lustre that has made the O-Cedar Mop famous. In addition to the mops shown at the exhibit there was also on view the O-Cedar Duster. This duster belongs to the same family as the mop, only the duster is intended for furniture more so than floors. The duster was also demonstrated most effectively and the results from the demonstrations made by the manufacturers of this product will be reaped by the hardware men who put these goods to the front. The popularity of these goods is attested by an almost universal sale, but there are many who have only been made acquainted with the merits of the O-Cedar Mop during the recent exhibition, and dealers who were visitors expressed the opinion that much good would result from the display.

PRACTICAL BOOTH OF A. RAMSAY & SON

THE booth of A. Ramsay & Son, paint manufacturers, appealed very strongly to housekeepers, also painters and decorators. As can be seen from the reproduction, the booth was divided off into sections and each section was finished to represent some room in the house. Ramsay's Products were used in the decorating.

The absence of cans and containers did not deteriorate the value of the booth, but rather added to the display, as each section from the hall, finished with Ramsay's Floor Wax, to the kitchen with its spotless walls finished with Dulltone, showed up to better advantage.

A. E. Oakley, in charge, explained in a masterly way how to apply the products as were shown at the Exhibition.

ATTRACTIVE DISPLAY OF CRAYONS, ETC.

THE display of Binney & Smith's products under the grandstand called forth much praise from the many interested visitors to the Exhibition. As a means of attracting the attention of the visitors, very clever drawings made with crayons manufactured by Binney & Smith were hung around the booth. "Soft Pastel," "Hard Pastel," "Crayola" crayons were used in making these excellent examples of crayon drawings. In the centre of the booth was shown a banner containing the awards given to Binney & Smith at the Panama-Pacific International Exposition at San Francisco this year. The above company's products were awarded the "Medal of Honor," being the highest award obtainable, this being higher than the gold medal. The photographs of the exhibit at San Francisco were displayed in the booth and were admired by everyone who visited it.

Binney & Smith manufacture a large assortment of crayons of all kinds, and are specialists in lumbermen's crayons, carpenters' chalk in various colors, also soapstone pencils for metal workers. A feature was made of a special composition metal workers' crayon known as "Pyrotalcal." This crayon is put up in convenient sizes.

Another specialty is that of a popular school crayon known as "An-du-septic." This crayon is a dustless black-board crayon, and is used in all the public and separate schools of Toronto as well as many other schools in the Dominion.

Mr. H. F. McIntosh, selling agent for Binney & Smith, is stated to have had many calls from dealers, and he expected that since the thousands of people who had visited the booth had seen the possibilities of crayons there would undoubtedly be good results obtained from the exhibit.

A full stock of supplies is carried by Mr. McIntosh at 82 Richmond Street East, Toronto.

New Hardware Goods

Offered Canadian Hardwaremen

SAFETY SLEDS

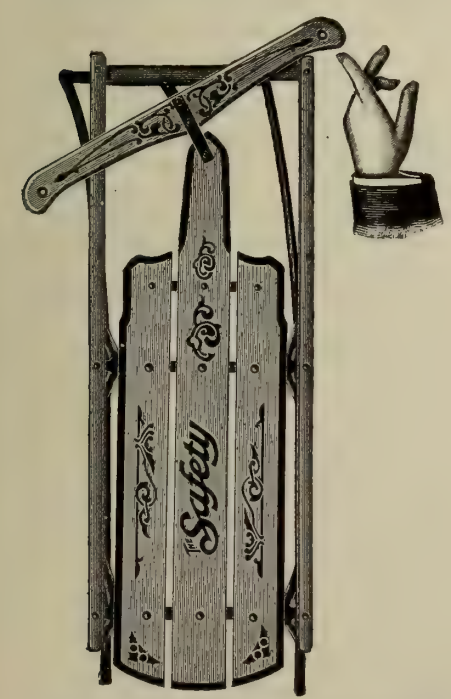
Canadian Warren Axe & Tool Co., Ltd., St. Catharines, Ont., offers to the trade a line of "Safety Sleds," made in Canada. The accompanying illustration shows one of the sleds. The makers direct attention to the remarkable steering radius obtained by simply bending the silver spring steel runner and not the wooden frame. The safety runner is made, it is claimed, from the best silver spring steel, and for that reason it will always keep its shape, is flexible, lasting and has a smooth running surface. The safety runners will not skid, except on clear ice, where the makers claim no runner can be honestly guaranteed not to skid.

The top does not move on the Safety Sleds, therefore there is no danger of pinching the fingers of the rider when guiding the sled. The strain on the centre board of the sled, as well as the rivets holding same in position, is reduced at least one-half.

The steering bar is placed at a suitable distance from the front ends of side rails, so that it will not slip over the ends and pinch the fingers of the rider when guiding with the hands.

The Safety Sled is made, it is claimed, from the best suitable material and every part riveted. They are neatly striped and decorated.

The sleds are made in six sizes. Complete details can be secured from the above named manufacturers.



Safety sled showing steering apparatus.

HELDTITE LATHER BRUSH

Heldtite Brush Co., Inc., Troy, N.Y., offers to the trade the Heldtite rubitin lather brush, here illustrated. The brush is made with a stand up rubberoid handle, aluminum ferrule, pure rubber drip cup. The makers state that the brush is made of one material from centre to circumference, a choice, imported, unbleached stock, full of elasticity and snap. The rubber drip cup, it is said, prevents the lather from running down the shaver's wrist. It is made of high grade stock that will not harden. The makers also claim that neither the ferrule nor handle can swell, crack, or loosen.

Heldtite Lather Brush.

ALOXITE CLOTH ECONOMY STRIPS

The Carborundum Company, Niagara Falls, N.Y., has recently added Aloxite Cloth Economy Strips to its automobile accessory line. Aloxite is an artificial abrasive—being produced in the electric furnace—and is very hard and tough. It is particularly adapted to the work of the garage man.

The Aloxite grains are uniformly coated on cloth with high quality glue, and the cloth is cut into strips 11 inches long and 1¼ inches wide. Fifteen strips in assorted grits are put up in a neat package to retail for fifteen cents.

The Aloxite Cloth Economy Strips are said to be very handy around the garage. They can be used for cleaning spark plug points, magneto points, cleaning off rust from metal parts, and for a dozen and one purposes.

Canada Paint News

The Canada Paint Co., Ltd., Montreal, recently introduced the "Canada Paint News," a magazine of helpfulness for paint dealers and consumers. The object of the first number is to describe the company's facilities for manufacturing and handling a wide range of paints and varnishes. A number of special articles, prepared by superintendents of the company's departments describe in detail the manufacture of ready-mixed paint; how dry colors are made; pure linseed oil in the making; an interesting description of varnish making; mining and treating of oxides at Red Mill. The "Facilities Number," as the first issue is called, is an attractively gotten up booklet, consisting of 16 pages, and showing many views of the extensive plant of the company. A large number of very interesting illustrations showing machines used in making paints, etc., have been used in connection with the articles describing the manufacture of various paint products. The introduction, by H. W. Aird, manager, gives some interesting data regarding origin and growth of the Canada Paint Company.

SEND IN YOUR RAZORS.

Old or spare razors are needed for the troops at the front. Large numbers have already been received but many more are needed. Hardwaremen throughout Canada are co-operating in the movement. Are you doing your bit? Hardwaremen are requested to kindly forward razors without delay to Thos. B. Lee, 30 Front St. East, Toronto.

Events in the Trade

Readers are requested to send in, for publication on this page, news items of interest to the trade.

E. A. Whitten Married

Bracebridge, Ont.—The marriage took place last week of Miss Myrtle Janet Wadsworth and Ernest Albert Whitten of the Whitten Hardware Co. Mr. Whitten is a member of the Executive of the Ontario Retail Hardware and Stove Dealers' Association.

Addition to Plant

Beatty Bros., Limited, Fergus, Ont., announce that they will build an addition to their London, Ont., plant this fall. The new building will be two storeys, 50 x 52 feet. Two new lots have also been purchased and added to the firm's London property and will be used for the storage of lumber. The addition to the London plant has been found necessary owing to a steady increase in the firm's pump business.

Business Changes

Stratford, Ont.—The store of Smiley & McCandless has changed hands. The successors to Smiley & McCandless are Wm. Cassidy and F. Martin. Mr. Cassidy was formerly in the hardware business in Paris, Ont.

Haileybury, Ont.—The hardware business of the Bell & Rochester Hardware Co. and S. Norfolk have been amalgamated. The Norfolk store has been closed, and the new firm will be known as Norfolk & Rochester, Limited.

Joins the Colors.

Winnipeg, Man.—S. G. Lydiard, who has been representing Sherwin-Williams in the West for a number of years, has responded to the call of the Empire and has joined the 99th battalion. Mr. Lydiard was the recipient of a wrist watch from the members of the staff.

Toronto, Ont.—The following members of Aikenhead Hardware, Limited, staff have enlisted for active service at the front; in fact, the first five mentioned are already abroad: Messrs. Bert Pearson, Harry Jones, Earl Bert, Egerton Savers, Moyes Clarke, Chas. Gatward, David Buchanan, Geo. H. Simpson, Thos. L. Reid and Geo. Gourlie.

Obituary

Brockville, Ont.—The death took place suddenly at Edmonton, Alta., of William Delahaye, manager of the Western branches of the National Mfg. Co. of this town.

Toronto, Ont.—The death took place suddenly at Hamilton, Ont., of Harry Eager, who for over 35 years was connected with Wood-Vallance & Co., and for many years manager of the firm's Toronto office. Owing to ill-health Mr. Eager resigned the managership of the Toronto branch last May.

Winnipeg Notes

Mr. Wolfe of the Estevan Hardware Co., Estevan, Sask., was in the city last Wednesday.

J. J. Wilson, who runs a general store at Steeprock, Man., was in town on a buying trip last week.

T. M. Perry, hardware merchant of Estevan, Sask., arrived in the city recently and called on his jobbing friends. Mr. Perry reports the crops throughout his district to be in excellent condition and expects that business will be very good this fall.

Have These Been Stolen?

The police at Thamesville, Ont., have in custody two prisoners who refuse to disclose where they procured the following:—

15 new razors; 1 Gillette safety razor, plain silver case; 2 shaving brushes marked $1.25 each; 1 pocket knife, plain handle, 3 inches German silver bolsters; "Tecumseh" etched on one blade; 1 large pocket knife, 2 blade, marked Alvinston, Ont; 1 new vest pocket flashlight. The prisoners are on remand for two weeks, which expires shortly after the publication of this issue. A large number of hardware stores have been burglarized during the past few weeks and it is possible that the above goods have been taken from a hardware store. Any merchant who has lost goods similar to those described should wire John Coutts, police magistrate, Thamesville, Ont.

Personal

Harry C. Moran, of Wood, Vallance & Co., Hamilton, Ont., who underwent a serious operation in the city hospital on September 14th, is making satisfactory progress towards recovery.

Sydney S. Chipperfield, of Messrs. Blundell, Spence & Co., Limited, Hull, England, recently paid a visit to Montreal, calling upon William H. Evans, the Canadian representative of Blundell, Spence & Co. After a brief visit to Toronto, Mr. Chipperfield returned home via New York.

A few members of the trade who called on the jobbers in Toronto during Exhibition week included:—W. Peart, of Peart Bros., Regina, Sask.; A. W. McDonald, North Bay, Ont.; M. Sproule, of McDougal & Sproule, White River, Ont.; P. H. Mason, of Mason & Campbell, North Bay, Ont.; T. R. Lougheed, Gore Bay, Ont.

Ontario Incorporations

Pullman Motors, Limited, capitalized at $100,000, head office Toronto, to manufacture automobiles, auto-trucks, cycles.

Burnall, Limited, capitalized at $100,000, have been incorporated to manufacture lighting and heating plants, head office, Toronto, Ont.

The Thompson-James Company, Limited, head office at Toronto, incorporated to manufacture explosives of every description and capitalized at $40,000.

Dominion Incorporations

Flexible Metal Hose Company Limited, have been incorporated with a capital stock of $200,000 to manufacture facture flexible metal hose and other products, head office, Ottawa, Ont.

Zinc Company, Limited, head office, Sherbrooke, Que., capitalized at $100,000 have been incorporated to operate zinc mines and smelters.

The Patent Grates Company, Limited, capitalized at $50,000, have been incorporated to manufacture patent boiler grates, head office, Sorel, Que.

T. and K. Industries, Limited, head office, Montreal, capitalized at $50,000, have been incorporated to manufacture machinery, tools, etc.

Russell Fire Proofing Limited, capitalized at $250,000, head office, Russell, Ont., have been incorporated to deal in fireproofing tile, brick, floor tiles, pottery, etc.

Everyman's Car Company, Limited, capitalized at $40,000, head office, Ottawa, Ont., has been incorporated to manufacture automobiles, autotruck and motor vehicles of all kinds.

Trade Inquiries

The Department of Trade and Commerce has received the following inquiries relating to Canadian trade. Addresses may be secured from the Department, or from the Editor, Hardware and Metal, Toronto, Canada. Please quote reference number when requesting addresses.

1015. **Toys, hardware, draperies, etc.**—A London manufacturers' agent is desirous of representing Canadian manufacturers of toys, and also of articles saleable to hardware merchants, drapers, fancy goods dealers, etc., among whom he claims a connection.

1017. **Wallpaper, unprinted.**—A firm of wallpaper manufacturers wishes to be placed in touch with Canadian exporters of unprinted wallpaper.

1018. **Steel hoops in one-half hundredweight bundles.**—A manufacturers' agent at Manchester wishes to be placed in touch with Canadian exporters of steel hoops in the following dimensions: ¾ in. by ⅛ in. 1 in. by ⅛ in., 1¼ in. by ⅛ in., 1½ in. by ⅛ in., 1¾ in. by ⅛ in., 2 in. by ⅛in.. 2½ in. by ⅛ in., in lengths of 24 feet folded in three. He also desires steel hoops in 16, 18 and 20 gauge, 1¾ in. to 2¼ ins. wide. and also 26 gauge, ⅞ in. wide; wire nails, wood screws, and fine-cut tacks.

1019. **Antimony**—A London firm who seeks supplies of antimony asks to be placed in communication with Eastern Canadian producers.

1021. **Bentwood furniture machinery.**—A firm in Glasgow wishes to ascertain if there are any Canadian firms who manufacture machinery for the production of bentwood furniture.

1022. **Birch planks.**—A London firm inquires for one thousand Quebec prime birch planks: 3 inches thick, 12 feet long and 9 inches wide. Price in shillings per cubic foot ex London dock less 3½ per cent. cash discount, and also price per plank. Quotations desired stating time of delivery.

1023. **Lumber.**—A Durban firm of commission agents requests correspondence from Canadian shippers of lumber for building purposes. i.e., deals, floorings, ceilings and scantlings.

1026. **Agent in France.**—A French gentleman who has had five years' experience in Canada would be glad to represent Canadian firms desiring to export to France, especially Paris.

1028. **Seal and cod liver oil.**—A firm of manufacturing chemists and importers on the east coast of England desire the addresses of Canadian exporters of seal and cod liver oil.

1029. **Trade in the Orient.**—A London firm having branches at Bombay, Calcutta and Colombo, and agencies throughout the Orient, are prepared to undertake the representation of Canadian manufacturers wishing to develop export trade in that market.

1030. **Wood alcohol, formaldehyde and acetic acid.**—A London firm seeks Canarian supplies of wood alcohol, formaldehyde and acetic acid.

TO LIST PROPERTY OWNERS

(Continued from page 36.)

basis. The merchants do not consider this a fair piece of legislation. They are always pleased to do a cash business, but they do not consider that the law should be retroactive, and many farmers have expressed the opinion that this amendment will not be to their advantage. The executive intends to take the matter up with the Government.

CONDITIONS IN THE HARDWARE TRADE

(Continued from page 35.)

the discussion emphasized the fact that through adequate co-operation and organization Canada can and will do much more towards meeting the most urgent needs of the allies at the present time—namely, the furnishing of the engines of war, including the manufacture of field guns.

It is expected that orders for shells in still larger quantities will soon be placed. One large firm in Montreal, in discussing this feature, said that they had received word from Ottawa, the tone of which was highly optimistic. Some manufacturers are now installing extra heavy tools for the production of 4.5 shells, the expectation being that the near future may warrant them doing so when still larger size shells will be called for.

Many inquiries have been received, and in some cases orders have been placed for lathes of 24 in., 26 in., and even larger sizes, for the production of 6-in. and 9-in. shells for the French and Russian War Offices.

The abnormal demand for billets and bars used in the production of various types of shells and component parts keeps the steel mills constantly going at about 100 per cent. capacity, and with orders on their books which cannot be filled for many months to come. If a supply of larger shells is demanded, and this seems more than likely, it will call for increased activity on the part of our steel producers to keep up the required supply of raw material.

Outside of the demand for metals used in making munitions, the metal markets are dull and weaker, with lower levels for nearly all metals.

In the paint trades there is a fair volume of trade passing, and retailers, although buying carefully, are sending in fair-sized orders. The chief feature in the paint markets during the past week has been the decline in the price of white lead, due largely to the continued weakness and declines in the pig lead market. Linseed oil, after a long period of weakness and continued price declines, has firmed up on account of the recent advances in the flax market.

There is a fair demand for glass in the smaller sizes for small buildings and repair work. The curtailment of building operations in the larger cities has had a serious effect on the glass trade.

WEEKLY PAINT MARKETS

(Continued from page 68.)

3 to 5 barrels	64c	67c
6 to 9 barrels	62c	65c

Turpentine.—Although there has been very little activity in the turpentine markets recently as regards the movement of supplies, an advance of 2c per gallon has gone into effect in the price of turpentine. There is no theory advanced here for the increase in price except that the price has been advanced in the primary markets. No reasons are forthcoming from the primary markets as to the cause, so it may be surmised that the advance may only be temporary. The quotations now ruling on the Toronto markets are as follows:

	Per Imp. gal.
Single barrels	64c
2 to 4 barrels	63c
5-gal. lots	71c

White Lead.—A decline of 50c per 100 lbs. in the price of white lead has gone into effect. A very small amount of business is passing and this, coupled with recent declines in the price of pig lead, is responsible for the decline. Some firms are selling at the new price, while there are others who at the time of writing have not been notified of the decline. Quotations on some brands in the current quotations have been changed this week. Others will probably follow next week.

Glass.—The amount of business being transacted in glass continues very poor.

Putty.—The demand for putty is quiet owing to the small demand for glass. There is no improvement expected until the operations in the building trades are resumed. Prices quoted on the Toronto markets are as follows:

	Per 100 lbs.
Bulk, in casks	$2.50
Bulk, in 100-lb. drums	2.70
Bulk, in 25-lb. drums	2.80
Bladders in barrels	3.10

Gasoline—Gasoline is firm at the recent advanced prices, and local jobbers state that higher prices may go into effect at an early date. The reason advanced for the rise in the price of gasoline is that gasoline is very scarce in the U.S. The new prices of 18c per gal. in 40-gal. drums and 20c per gal. in barrels and 17½c tank wagon, are being maintained.

Weekly Market Reports

Statements From Buying Centres

The Markets at a Glance

The exceptionally warm weather of the past two weeks has had a tendency to slacken the demand for fall goods, although the outlook for fall and winter trade is very satisfactory. Retailers are buying carefully, but more freely than for some time. The metal markets are quiet, but weak. The chief price change during the week took place in the price of white lead which declined fifty cents per 100 pounds, following the recent declines in pig lead. Linseed oil has advanced following the higher prices on flax seed. Turpentine is firmer. There has been no improvement in building operations in the larger cities, but there is a fair amount going on in the smaller towns, and in the agricultural districts. Some lines of guns have been advanced in price during the week and price changes in a few other lines of hardware are expected in the near future. Reports from Western Canada are very optimistic, and hardware jobbers report a good improvement in business. Hardware stocks throughout the country have been very low and the increasing sorting orders may be taken to some extent at least as an expression of the optimistic feeling prevailing throughout the country.

MONTREAL

MONTREAL, Sept. 16.—The trend of business shows little change, although during the week the movement of fall and winter lines has hardly been what might have been hoped for; for this unseasonably warm weather may have been the cause. Generally the outlook is regarded as satisfactory in view of the prevailing conditions, but the hesitancy of the retailer to place heavy orders where he is not absolutely sure of a demand is still very much in evidence.

Price changes for the week are few and a number of adjustments which have been under consideration are unconfirmed owing to a postponement of a meeting of the Wholesalers' Association scheduled for Wednesday. A basis for galvanized iron is expected to be re-established at this meeting and it is not anticipated that the changes will be very important; Apollo and Colborne Crown are likely to be readjusted, however.

In the metals the actual changes in quotations are few, but the market is weak for tin, spelter and lead; as regards the latter, it might be said to be absolutely "sick," the American Trust price having declined twice during the week. Generally speaking, the metal market is very unsettled, perhaps more so than at any time since the period of chaos which prevailed for some time after the declaration of war.

Tin.—Tin is regarded as being weak at the present local quotation and the tendency is towards lower levels. New York is on the same level as at last report, but there have been fluctuations between times. There has been little business of late in the States and sellers are showing an eagerness to meet buyers on the present basis. The American consumption is excellent but consumers are well bought and they can see nothing to encourage them to buy futures freely at present. The situation appears to be sound, but people are not in the buying mood and it is doubtful if there will be a change in this sentiment until there is an improvement in the foreign exchange situation. The stricter enforcement of the British regulations regarding the exportation of plate tin has had some slight effect on American sentiment.

Spelter.—The local situation is given as unchanged but weak and this tendency towards lower prices no doubt finds birth in the States. New York reporting a decline of more than 1c since a week ago. Here, as in most of the other metals, the exchange situation appears to be the depressing feature and there is no snap to the market nor likely to be until the financial conditions are improved.

Lead.—The weak feature of the metals is lead. The local quotation has not changed, but the tendency is downward, and there are likely to be reductions if the present American market does not advance. Since last report there have been two important cuts made by the American Trust and followed by the independents and second hands. The New York basis is now 4½c. However, the Canadian trade must remember that the Canadian adjustments will not be on the same basis as before the war, owing to the increased duty of 7½ per cent. which must be taken into consideration. The present American quotation entirely wipes out the advances which were made after the outbreak of the war. So far as lead is concerned, the situation seems to be that the Trust has increased production to such an extent that, despite the talk of large war orders, there are greater supplies than required by the demand. It would appear that the aftermath of the manipulation of last summer is now being experienced.

Copper.—There is comparative firmness in the copper market both locally and outside. Advances in London and reports of serious strikes in copper mines in the Western States have caused New York to advance. However, the "American Metal Market" is convinced that the strength is largely due to sentiment and that there is no real consuming demand upon which higher prices are warranted.

Antimony.—The situation as regards antimony is very unsettled and when stocks can be secured at all quotations are purely nominal. The local reduction

MONTREAL QUOTATIONS.

Tin	42c-43c
Spelter	19c-20c
Copper	21c
Lead	6½c-6¾c
Antimony	35c
Solder, ½ x ½	26c-28c
Solder "strictly"	28c-30c
Aluminum, Ingot	50c lb.
Wire Nails	$2.50 base
Cut Nails	$2.50 base
Pure Manila Rope	16c base
British Manila Rope	13½c base
African Hemp	13½c
Sisal	11¼c
Lath Yarn	10¾c

For quotations on other hardware goods see weekly report and current quotations.

of last week from 40c to 35c is probably an indication that most of the dealers have run out of their stocks of English antimony, and that the new price is for Chinese and Japanese.

Aluminum.—Stocks are very scarce and prices are altogether nominal. New York reports that, while there is practically no market there, lots of 10 to 25 tons are being offered at 50c. The figure mentioned is still being quoted locally also, but would seem likely to be advanced further.

Solder.—In sympathy with tin and spelter, solder is inclined to be easier, although the same range of prices continues. Half-and-half is quoted 26c to 28c and strictly 28c to 30c.

Galvanized Iron.—Although there has been no formal re-establishment of the quotations for galvanized sheets, which were withdrawn two weeks ago, it is generally understood that a working agreement has been reached which will probably be confirmed by the end of the present week. From information obtained it would appear that the old figures will continue for Canada plates, corrugated galvanized sheets and Queen's Head, Fleur-de-Lis and Gorbal's Best galvanized sheets, while Colborne Crown will be advanced about 50c all round and Apollo materially reduced. The following is expected to be the new schedule generally accepted:

Canada Plates.—

Ordinary, 52 sheets	$3.45
All bright, 52 sheets	4.40

	Galvanized		
	Apollo	Crown	Gorbals
18 x 24 x 52	6.00	6.00	6.00
60	6.25	6.25	6.25
20 x 28 x 47	6.25	6.25	6.25
20 x 28 x 94	12.50	12.50	12.50

Sheets.—

Corrugated, galv.

18 gauge, per square	$14.00
20 gauge, per square	11.00
22 gauge, per square	9.00
24 gauge, per square	7.50
26 gauge, per square	5.25
28 gauge, per square	5.00

Discount to dealers 20 p.c.

Galvanized.—

B.W. gauge	Queen's Head	Fleur-de-Lis	Gorbals best
16-20	5.40	5.15	5.40
22-24	5.50	5.30	5.50
26	5.75	5.45	5.75
28	6.00	5.75	6.00

Apollo		Colborne Crown	
14 gauge	$4.55	16-20 gauge	$5.10
16 gauge	4.55	22-24 gauge	5.30
18-20 gauge	4.75	26 gauge	5.55
22-24 gauge	4.85	25 gauge	5.80
26 gauge	4.95		
28 gauge	5.45		
10¾ oz.	5.65		

Less than case lots, add 25c.

Galvanized Products.—Galvanized products generally are inclined to be easier on the small demand which developed following the advances, and the lower prices now prevailing for spelter. However, even at the present price for raw material, manufacturers of certain lines of galvanized ware, etc., report that they do not feel warranted in going back into the production of goods which, even on the present basis, would be too high to retain their popularity in the face of cheap substitutes.

Lead Pipe.—If the present lead values continue for any length of time further reductions in lead sheets, pipe and other products of the metal may be looked for. For the present the quotation of 9½c for lead pipe and 10½c for lead waste pipe is continued.

Nails.—The new price for wire nails is well maintained. The advance has not had a favorable effect on business, but on the other hand the demand has not materially fallen off, there being a small movement of nails at this season in any event, especially in such a year as this has been.

Iron and Steel.—Quotations for many lines of iron and steel are very firm. In fact, several firms are quoting an advance of 5c, to $2.10, on bar iron. The demand for steel in connection with the manufacture of munitions, and also in the making of mechanic tools, has had its effect so far as this metal is concerned.

Screws.—While there is not a broad demand for screws, the prices are very firm on the influence of the American market. Also it is noted that there is a shortage of screws of the variety used in the manufacture of ammunition boxes.

Guns and Ammunition.—The movement of ammunition continues very satisfactory. It is noted that there is an increasing difficulty in getting deliveries, especially of metallic shells. This is the direct result of the war demands upon the ammunition factories. Also it is noted that the demand for single barrelled guns has resulted in a shortage in certain materials and there has been an advance of 5 to 10 per cent.

Rifles.—Adjustments to cover the increase of 5 per cent. on Winchester rifles and 10 per cent. on Stevens rifles have not yet been officially announced. It is expected that the new price of the Winchester line will be 7½ per cent. off.

Seasonable Goods.—Although the unseasonably warm weather of the past few days has had some effect on the call for fall and winter lines, it is noted that axes and ax-handles have been added to the active list and that there is a continued strong call for cow ties, as well as blankets, lanterns. etc.

Stoves and Furnaces.—Despite the conditions prevailing, reports indicate a very good demand for furnaces and a fair inquiry for stoves which is expected to broaden with the arrival of cold weather. Altogether the situation is reported as being a distinct improvement over a year ago, but a great deal more improvement might be shown without attaining to a normal season.

Sheet Zinc.—Dealers in metals, whose attention has been drawn to the fact that local quotations are about 5c higher than those prevailing in a Western city, state that a lower price than 25c is not warranted by the market and that anything under that indicates a purely local condition where jobbers with cheap stocks may be out to encourage business.

TORONTO

TORONTO, Sept. 17.—There is a noticeable improvement in the demand for general hardware lines. The splendid crop reports have had a good effect on trade and have created a more optimistic feeling than has existed for some time past.

The Metal Markets

The metal markets are still quiet and very little business is passing. Tin remains steady, and is quiet locally. The local price ranges from 39c to 40c.

Copper remains unchanged and is quoted locally at 19½ to 20c.

Spelter is scarce and is quoted locally at 16½ to 17½c.

The lead market is weaker. The price in effect locally is 6¼c.

Antimony is quiet and is quoted at 36c while aluminum is very scarce and is quoted at 50c per pound.

The steel trades are running 100 per cent. capacity on account of demand for materials for shell making.

Rope.—Cordage jobbers state that a fair volume of business is being transacted, also that the prospects for a good fall trade are very bright. The prices on all kinds of rope are holding firm, and are quoted on the Toronto markets as follows:

TORONTO QUOTATIONS.

Tin	39c-40c
Copper	19½c-20c
Spelter	16½c-17½c
Lead	6¼c
Antimony	36c
Aluminum Ingot	50c
Aluminum Pattern	48c lb.
Solder, ½ x ½	24c lb.
Wire Solder	27c lb.
Wiping Solder	23c lb.
Tinker's Bar Solder	29c lb.
Solder, Wiping—	
Acme	21c
Commercial	22½c
Easy	22c
Star Extra	25¼c
Strictly standard wiping	25¼c

	Lb. basis
Pure Manila	16c
British Manila	13½c
African Hemp	13½c.
Sisal	11½c

Binder Twine.—The season for selling binder twine is practically over, as is indicated by the small amount of business transacted by jobbers during the past week. Local jobbers state that this season has surpassed any previous season for many years as regards the quantity of binder twine sold, also that repeat orders came in from almost every section of the country where dealers thought they had ample supplies. The shortages which were reported through the press, apparently were only nominal shortages as the local jobbers have been able to meet the unusual demands with representative stocks.

Nails.—The advance of 10c per keg on wire nails, quoted in last week's report, which placed nails at a base of $2.45, is in effect with all jobbers. The price is reported to be very firm owing to the high price of rods, and in all probability a further advance will go into effect at an early date. The advance in price affected wire nails only; the prices of other nails are shown in the current quotations.

Galvanized Sheets.—The fact that the recent high prices and lack of demand have reduced the consumption of galvanized sheets to a very low point has had a tendency to create price-cutting on the part of some dealers to secure the small amount of business that is passing. Lower levels in the price of galvanized sheets are predicted. The prices shown in the current quotations are general on the local markets, but in some cases these are shaded a little in some quarters.

Brass Jack Chain.—In sympathy with the high price of brass, a further increase in the price of brass jack-chain has gone into effect. The new discount is now 20 per cent. off list against 35 per cent. as formerly. The latest increase makes a total increase in the price of brass jack-chain of exactly 100 per cent. more than the price was at the commencement of the present war.

Shotguns.—Although there has been no definite change, it is predicted that the price of all single-barrel shotguns is going to advance. The nature of the advance has not come to hand, but it is expected that within the next few days the trade will adjust the price to cover the recent increase.

Arms and Ammunition.—The regular fall pastime does not seem to be affected in any way by the war as local dealers state that the sale of arms and ammunition is equal to that of a year ago. Loaded shells are moving very freely. Rifles are selling well, as also are double-barrel shotguns.

Stoves.—Owing to the unusually warm weather which has prevailed this month, stoves and heaters have not received much attention from the general public. Before interest can be manifested by the consumers, a cold spell will be very necessary. Even though very little actual business is passing in the stove line, manufacturers are very optimistic about the coming fall trade, as it is the belief of the majority of manufacturers that the prosperous conditions that exist in all parts of the country are going to stimulate the stove trade to a great extent.

Cutlery.—A fair cutlery trade is reported among the trade, considering the lines that are available. Increasing difficulty is being experienced by the majority of wholesalers in getting shipments of Sheffield cutlery owing to the labor troubles that exist in England. A shortage of raw material and other supplies is also attributed to the cause. Prices on all lines of cutlery remain very firm.

Harvest Tools.—The price of harvest tools for the coming year is unchanged and orders for spring delivery will be booked at the same discounts that were ruling during the past year.

Seasonable Lines.—The movement of seasonable lines is improving, and there is a fairly good demand for horse blankets, lanterns, lamp burners, cow-ties. Shipments have been made during the past week to the north country of fairly large orders containing snow-shoes, snow shovels, foot warmers, sleigh bells and other winter supplies, which indicate that the northern dealers are preparing for the winter season.

Waste.—A very good volume of business is being done by local jobbers in all kinds of waste. The prices are holding firm and there is said to be possibility of a further advance in the near future. It is claimed that the increased prices for raw material make it necessary to again advance the local price of waste. Nothing definite as regards the proposed change is available.

LONDON

LONDON, Ont., Sept. 10.—Local jobbers state that business continues very fair, also that collections are fairly good.

Many merchants from Western Ontario are in the city for the annual Western fair. Excellent displays of stoves and hardware exhibits are shown at the exhibition by retailers this year as usual. Many of the local merchants are featuring special window displays during fair week.

Seasonable goods are moving now, and a good fall trade is looked for among the local jobbers. There are no price changes, although a decline in lead and an advance in oil may take place towards the end of the week.

Linseed Oil.—The demand for linseed oil continues slow, and prices remain firm. During the past week the flaxseed market strengthened considerably, owing to the inclement weather in the West. This had its effect on the linseed oil market, but only to strengthen the price, no actual change in price having taken place so far. The following figures are being quoted for linseed oil on the local markets:

	Raw.	Boiled.
1 to 2 barrels	65c	68c
3 to 5 barrels	64c	67c
6 to 9 barrels	62c	65c

Turpentine. — Although no actual change has taken place in the price of turpentine, it is expected that a change is very probable at an early date owing to increased prices ruling on the Savannah markets. The present prices ruling on the London markets are as follows:

	Ped Imp. gal.
1-barrel lots	62c
2 to 4-barrel lots	61c
5-gallon lots	69c

White Lead.—The high price of white lead, quoted locally at $10.60 per 100 lbs. in ton lots and $10.90 per 100 lbs. in less than ton lots, is still in effect. It is probable that a reduction will take place shortly.

Nails.—The new price of $2.45 per keg for wire nails is holding firm, and no easing up in the price is expected on account of the increased cost of wire rods. Cut nails at $2.70 per 100-lb. keg are very firm. Fair business in nails is reported locally.

Glass.—The glass situation is unchanged, the following discount being general among the local jobbers:

Single diamond, 10 per cent. off list.
Double diamond, 10 per cent. off list.
Cut lights, 15 per cent. off list.

Putty.—Putty, like glass, continues to move very slowly owing to the slowness of building operations. The prices are holding firm, and are quoted among the local jobbers at the following figures:

	Per 100 lbs.
Standard 100-lb. drums	$2.70
„ 25-lb. drums	2.80
„ Bladders	3.25
Pure 100-lb. drums	3.30
„ 25-lb. drums	3.40

Rope.—Fair business is passing on all kinds of rope, with firm prices ruling. Manila and sisal are both good sellers, with Manila a good leader. The following prices rule on the London markets:

	Per lb. base.
Pure Manila	16c
British Manila	13½c
African hemp	13½c
Sisal	11½c

Cow Ties.—Cow ties, selling at a discount of 40 per cent. off list, are moving out, also other stable accessories, such as

WINNIPEG QUOTATIONS.

Solder	29c-30c lb.
Linseed Oil, raw	95c gal.
Linseed Oil, boiled	98c gal.
Turpentine, in bbls.	80c
White Lead, ton	$11.50

Galvanized, 1 inch	$11.10
Black, 1 inch	5.95
Paris Green:	
1-lb. pkgs. (case lots)	27½c

Glass:	**Sgle.**	**Dble.**
Up to 25 in.	$6.25	$9.00
Putty, 100 lb. drums	$3.25	

lanterns, stall fixtures, manure forks, etc.

Fence Staples. — Galvanized fence staples at $3.60 per 100 lbs. keg and 25-lb. boxes at $3.85 per 100 lbs. are selling well. Bright fence staples are selling at $2.75 per 100 lbs. in kegs and 25-lb. boxes at $3 per 100 lbs. Prices are very firm.

Fence Wire.—No further changes in the price of fence wire have occurred during the past week, and prices at the following figures are reported to be very firm:

	Per 100 lbs.
Bar wire	$3.10
No. 9 galvanized wire	2.70
No. 12 galvanized wire	2.85
No. 13 galvanized wire	2.95
No. 9 coil spring	2.75
No. 10 O and A	2.61
No. 11 O and A	2.67
No. 12 O and A	2.75

WINNIPEG

WINNIPEG, Man., Sept. 15.—Predictions for a good volume of business during September have been fully maintained so far. Last Tuesday's mail, following the holiday, was the heaviest handled in some months, and the succeeding days have continued to bring in good-sized orders.

Hardware stocks throughout the country have been kept at a pretty low figure during the past year and the increased sorting orders now being placed by the retailer may be taken as an expression of the optimistic feeling prevailing throughout the country.

Threshing being late this year has made the demand for engine headlights, lanterns, flashlights and horse blankets exceptionally brisk.

Merchants living in districts where hay is grown extensively should see that their stock of hay baling wire and ties is sufficient to meet coming demands. The Imperial Government has been buying hay in large quantities throughout the East and as this source of supply is nearly exhausted, orders will have to be filled in the West. This should increase the sale of wire materially, and placing orders now may eliminate expensive delays at a little later date.

The first boat to leave Port Arthur with grain sailed on Saturday. From now until the close of navigation, grain will be moving rapidly. The railways claim to be in exceptionally good shape to handle this year's crop and no congestion of traffic is anticipated.

Farmers will be getting returns from their grain, and the merchants who have organized their collecting campaign will be the ones to benefit.

The Markets.—The price of wire goods has advanced to $42 per ton in Pittsburgh, and this has caused the Canadian manufacturers to advance their prices on annealed wire, bale ties and various other wire products. Wire nails have also been advanced by the makers but the Winnipeg jobbers will maintain present prices for some time yet.

Annealed Iron Wire is now quoted as follows:

	Per 100 lbs.
No. 9	$2.85
No. 10	2.91
No. 11	2.97
No. 12	3.05
No. 13	3.15
No. 14	3.25
No. 15	3.40
No. 16	3.55

Bale Ties, 14 ga., 9 ft. 6 in.
Ft. William shipment .. $3.50 per 100 lbs.
Winnipeg shipment .... 3.90 per 100 lbs.

Fence Staples.—
Fort William shipment .. $ 2.80 per keg
Winnipeg shipment ..... 3.20 per keg

A slight reduction has been made in drive well points, which is here noted:

No. 90	$1.00 each
No. 94	1.28 each
No. 140	1.67 each
No. 164	2.50 each
No. 184	5.00 each

BUYING BARBED WIRE

British War Office Picking Up Stocks Where Available

Recently there have been substantial purchases of barbed wire made in Canada by the agents of the British War Office. According to E. Fitzgerald, the purchasing agent, it has been largely a case of picking up available stocks rather than placing orders with manufacturers.

Mr. Fitzgerald also states that on account of the high price of spelter the specifications have been altered so that only the ungalvanized wire is being taken. For the purpose it is said to suit the purpose just as well as the more expensive variety.

AN APPEAL ON BEHALF OF THE NATIONAL CANADIAN PATRIOTIC FUND

We have now entered upon the second year of the war, and the end seems as far off as ever. No one imagined, a year ago, that by September of 1915, Canada would have sent across the Atlantic nearly one hundred thousand men with as many more to follow if necessary. This magnifient enlistment, while primarily due to the loyalty of our people, has been, in a large measure, made possible by the Canadian Patriotic Fund.

This greatest of all the national benefactions is now assisting twenty thousand families of men who have enlisted for overseas service. These men have gone forward with the full assurance that the people of Canada will see to it that during their absence, their wives, widowed mothers and little children shall be maintained in comfort. We hear that the drain upon the Fund is assuming large proportions, that to meet the needs of July and August $700,000 was expended, that the reserves are being materially decreased and that the National Executive Committee now finds it necessary to make a further appeal to the Canadian public.

There are many funds, most of them worthy, but of them all the Patriotic Fund is the one we cannot allow to fail. It is the duty of the Government to arm, equip and maintain the troops. Not a dollar do the Federal authorities give to the Patriotic Fund. This work depends solely on the patriotism and generosity of our own people. Thousands of brave men are fighting our battles, believing that we meant what we said when we told them as they went forward: "Go and we will care for the wife and kiddies." It would be to our everlasting disgrace if our pledge were broken.

The national organization, with headquarters at Ottawa and branches or affiliated associations in every part of the Dominion, is worthy of our most generous support in the tremendous and ever-growing task that it has undertaken.

Ottawa, September 1, 1915.

Paint Department

Co-operation the Keynote of Painting Success

HARDWARE AND METAL has on many occasions referred to the importance of co-operation between the paint manufacturer, retailer and the painter. Readers will no doubt be interested in an address on "Co-operation—the Keynote of Painting success." delivered before the Missouri Master Painters' Convention by F. S. Skeen, and reported in the American Paint and Oil Dealer. Many excellent suggestions have been offered, and the value of co-operation has been strongly emphasized.

"The relations between the paint manufacturer and dealer, as producer and seller, and painter, as consumer, like the relations that exist between producer and consumer in all lines of merchandise, thanks to a better understanding on one another, have improved very materially during recent years.

"The spirit of caveat emptor (let the buyer beware) which formerly prevailed to a marked extent is gradually diminishing, and in its stead there is the feeling of let the seller beware, the feeling of interdependence or the realization that we have much in common. The conviction that what promotes good for one does likewise for the other, and that steady incomes are dependent upon real service whether that service be a can full of good paint or a good job of painting, the buyer must be satisfied. It cannot be truthfully said that this antagonistic feeling has entirely disappeared, nor will it be accomplished until we all look at the subject in a broader way, until the paint dealer and painter realize, take into consideration and act upon their realization that each can be of material assistance to the other, and that by pulling together, by thorough co-operation, the greater will be the rewards of both.

"I do not believe that any successful painter, who will take inventory of himself and his work, can harbor antagonism to the legitimate paint manufacturer and dealer, nor can I imagine any dealer so short-sighted harboring any such feeling against the painters as a body. Such antagonism as remains in the minds of the painter was doubtless brought about by the idea that the manufacturer and dealer, through marketing a ready-to-use paint and the fact that some house owners are sufficiently adept to paint, would result in the painter losing lots of work. To my mind this objection is greatly magnified. In nine cases out of ten, where a house owner applies the paint himself, he would not have painted at all had he thought it necessary to have gone to the expense of hiring the labor.

Mixed Paint and the Painter

"On the other hand, I believe it to be an absolute fact that the sale of ready-mixed paint has materially helped the painter, as like anything else, that makes for sanitation and gives the air of cheerfulness and prosperity, painting is contagious. Doubtless many of you have noticed where painting one house in a vicinity has resulted in practically all of them being painted, a sort of "follow the leader game." It is human nature for any to like to have their homes appear as bright, cheerful and prosperous as their circumstances will permit, and if it so happens that their circumstances will not permit of their hiring labor and they feel like doing it themselves, I do not think that there is one of you that would deny them this privilege.

"Suppose you live in Backwardsville and you're a house owner. You go to the dealer who is the representative of the manufacturer of ready-mixed paint. He stakes his reputation with that of the manufacturer, boosts his ready-mixed paint and condemns painters and painter-made paint. So, being a fair-minded person, and remembering that there are two sides to every question, you go to a painter who tells you in plain English that the dealer is a faker and his paint all dope. What would you think of both of these men—why, you'd be afraid to do business with either one.

On the other hand, suppose you lived in the good town of Enterprise, and as a house owner paid a call on the dealer. This dealer boosted his paint, but represented it honestly, and gave you the names of several reliable painters. You went to the painter, who spent his time showing you the economy of properly applied paint instead of damning the dealer. Nine times out of ten you'd give the painter the job and have confidence in both the material and the man.

"There is so much good to be done by pulling together, by co-operation. To my mind that word 'co-operation' is one of the greatest factors in business to-day. No business in itself succeeds without it. No industry accomplishes its greatest good unless co-operation, the pull-together spirit, is well developed in the various phases of it, and it is developing in this industry of ours.

"This fact is evidenced by the co-operative work on Government and association test fences and other experimental tests conducted by the manufacturer and the painters in various states. In Washington, D.C., A. H. McGhan, of your National Master Painters' Association "Clean Up and Paint Up" campaign committee, helped push one of the most successful campaigns of this year. He and the other master painters had the co-operation of every dealer, manufacturer and jobber in their city. These are but two examples of what splendid work can be achieved by real co-operation. The nation-wide awakening to paint as the chief conserver of material and civic values in community improvement work is increasing phenomenally. This year the National "Clean Up and Paint Up" campaign bureau collected nearly 20 miles of newspaper clippings all breathing the "paint up" spirit.

"This great movement, and the scientific work being done by the Paint Manufacturers' Association, the great amount of advertising being done by the manufacturers—all spells opportunity. And we can all make as much or as little by it as we wish; separately we cannot pass the much-talked-of 100 per cent. efficiency test. Together we can bring home the bacon.

"Did you know that experts say one one-fourth of this country is painted—that four times as much paint and varnish should be used. The get-together, stick together teamwork will help us get some of the 75 per cent. Let's do it.

Weekly Paint Markets

MONTREAL

MONTREAL, Sept. 16.—Some improvement in trade conditions was reported during the week, but interest has been directed rather to developments as regards prices. Lead is being quoted down 50c to a ton basis of 9.95, and advances from 2c to 5c are to be noted in different quotations on linseed oil. Altogether conditions are very unsettled, and this has been an important factor in deferring the usual fall improvement in business. Lead is easy on the new price, and the indications are that there will be further reductions, but on the other hand, there is the advance in oil and the firm present and uncertain future of zinc to be considered. Under the circumstances a reduction of prices on mixed paints is not to be looked for in the immediate future, especially, as has been pointed out before, it is not the policy of the manufacturers to "change horses while crossing a stream" by altering quotations when a campaign is half over. At the same time, it is recognized that, with the tendency of the market being in any important sense downward, the buying will be light and that stocks will be maintained on the lowest possible basis unless there is something in the nature of a price guarantee offered to the retailers on deferred orders.

While the war lasts and the building depression continues, anything like normal conditions over the whole trade are not to be looked for, but there is a feeling that with good crops there should be a fair fall campaign, especially in the outside districts. At the same time, the attitude of the retailer towards heavy buying is appreciated from two standpoints—the value of capital to himself and the danger of over-stocking on a falling market, as the present values must be considered as abnormal.

Lisseed Oil.—Late developments in linseed oil based on the advancing market for flax have unsettled the situation to perhaps a greater extent than ever, although adjustments are likely to be effected in a few days, which will narrow the spread in prices. One firm, which advanced on Wednesday to 65c and 68c for raw and boiled, respectively, reported that the position of flax had warranted an increase of about 5c a gallon in the past couple of weeks. At the same time, another house adhered to the price of 60c and 63c, which it has quoted for some time, but it is doubtful if that price will be in effect when this information reaches the reader. A low figure of 62c to 63c for raw and 65c to 66c for boiled would appear to better indicate the market, with advances in these prices likely. The following range will cover practically all quotations for next week:

	Raw.	Boiled.
1 to 2 barrels	62c-65c	65c-68c
3 to 5 barrels	61c-64c	64c-67c
6 to 9 barrels	60c-63c	63c-66c

White Lead.—A decline in the price of white lead is announced, although not as yet in general effect with the different jobbing firms. This brings the basis down to $9.95 for ton lots, with less amounts at 30c above. The decline comes in sympathy with the weaker American market for pig lead, which has declined twice during the week. The new basis is not by any means a strong one, and there are likely to be further declines in the future. It might be noted that the advances in white lead since the beginning of the war have been $1.50, and that to-day pig lead is little dearer than it was on 1st of August last, except for the addition of 7½ per cent. to the duty.

Zinc.—The reduction in the cost of mixed paints, which might be indicated in the lower quotations for white lead, is offset practically altogether by the continued strong position of zinc. There is little indication of weakness in the variety of product of this metal entering into the manufacture of mixed paints. However, the future is very uncertain, and the present prices are certainly abnormal, and this may be regarded with a certain significance in relation to the reductions recently made in metals and metal products in general.

Turpentine.—Reports are to the effect that there have been tendencies in the turpentine market in the past week which have worked for firmer prices. However, so far as quotations to the trade are concerned, the wide range continues as follows:

	Per gal.
½-barrel lots	61-65c
1-barrel lots	58-62c
2 to 4-barrel lots	57-61c
5 to 10-barrel lots	56-60c

Gasoline and Benzine.—The continued open weather, with good roads and the consequent popularity of autumn motoring, has had the effect of causing a brisk demand for gasoline this week. The prices are unchanged at 17½c in drums and 17c for tank wagon. Benzine continues at 14½c for drums and 14c tank wagon.

Glass, Putty, etc.—Glass and putty are both firm, and the demand is fair so far as the small window business is concerned. The situation as regards collectors continues much the same, with adjustments being made from time to time as stocks of certain reds and blues become shorter and finally exhausted altogether.

TORONTO

TORONTO, Sept. 17.—The chief feature of interest in the paint markets this week is the decline of fifty cents per 100 pounds in the price of white lead, due largely to the continued weakness and decline in the price of pig lead. There has also been an advance in linseed oil, after a long period of weakness. The advance in oil is due chiefly to the higher prices now quoted for flax seed. Turpentine has also advanced. The general situation has not changed to any great extent, although jobbers and retailers expect an early improvement when crop money begins to circulate, and the fall campaigns of the manufacturers and retailers begin to show results.

Linseed Oil.—The downward trend in the price of linseed oil has been checked by the reaction of the flaxseed markets. In sympathy with the increased prices in the flaxseed markets during the past week, an advance of 2c per gallon has gone into effect in the price of linseed oil. The increase will not likely have a tendency to improve business any owing to the absence of demand. The amount of business being transacted is very small and a few jobbers are anxious to unload the fairly heavy stocks of oil which they have carried during the summer season. The prices ruling on the Toronto markets are as follows:

	Raw	Boiled
1 to 2 barrels	65c	68c

BT STANDS FOR BEST

Sell BT Post Augers

BT Daisy Auger can be used in any kind or condition of soil that can be dug with pick or spade. It can be used in stony land, and without fear of breaking.

It can be operated by one or two men, and has an extension handle so that it can be used in deep holes without need for stooping.

BT Daisy Post Augers have been known to the trade for years. They were formerly made by the Wortman & Ward Company, bought out by Beatty Bros., three years ago.

Sell them in the fall of the year when most of the fencing is being done.

Order them to-day.

MARTIN-SENOUR
PAINTS AND VARNISHES

MADE IN CANADA

A Trade-Mark Which
Assures Quality and Service

Back of the name Martin-Senour and the "hand behind the brush" trade-mark are found paint and varnish products as nearly perfect as human agency can devise.

To build a successful business on a basis of permanence and profit it is absolutely necessary to supply your customers with Quality Goods.

The Great Essential

—Made-in-Canada goods to meet the approval of Canadian buyers must of necessity be Quality goods. The splendid quality of Martin-Senour Paints and Varnishes has long been recognized by Canadians.

Our Dealer-Agents vouch for it. Users positively know it. Time has surely proven it. We fully guarantee it.

Value—the best salesman—keeps our factories running full capacity. The Martin-Senour exclusive agency is a valuable asset. Would you like to have the plan laid before you for consideration?

Stephens

HOUSE PAINT

Stephens House Paint is made by experts for the use of both the Painter and Consumer.

The professional painter, as well as the amateur, is a steady user of "Stephens House Paint" because it saves him time and money, and always gives satisfaction. Stephens House Paint has wonderful weather-resisting qualities and no superior as a surface coverer.

If not already represented in your town we will be glad to explain our exclusive agency proposition. Write us about it.

PAINT AND VARNISH MAKERS

WINNIPEG and CALGARY

Did you get your copy?—second number has just been mailed.

CANADA PAINT NEWS

A Magazine of Helpfulness for Paint Dealers and Consumers

THE first number was devoted to the manufacturing end of paints, varnishes, linseed oil, dry colors, and oxides. If you didn't get a copy, send us a card—we want your name on the mailing list.

AND now the second issue has been mailed to paint dealers from east to west. It talks SALES—how to make sales in the Fall—this Fall in particular. Not only does it "talk"—but an advertising order has been sent out with each copy, which enables the aggressive paint dealers receiving it—to secure free of cost all the attractive and effective advertising material he requires to conduct a really successful and profitable paint campaign this Fall.

Read CANADA PAINT NEWS. It is devoted entirely to paint.

Does a Year's Business in Six Months

HERE'S a letter from C. H. Pockrandt, a live wire in the paint business, that is full of information for any dealer who wants to realize bigger sales and profits in his Varnish Department. Mr. Pockrandt says his sales up to July 15th equaled those for the entire year of 1914, and tells you the reasons why he was able to make such a showing — the same reasons why it would be entirely possible for you to make such a showing also. Read his letter. Then write for complete Dealer's Proposition.

PAINT THE POCKRANDT CO. SUPPLY
WHOLESALE AND RETAIL
Paint, Oil, Varnish and Painters Supplies.
19 NORTH HOWARD STREET
Both Phones

AKRON OHIO. July 15 1915.

Messers. Pratt & Lambert,
Buffalo, N. Y.

Gentlemen:-

We take the liberty in writing you that we feel very proud of the fact that we succeeded in getting the Varnish business on the Y. M. C. A. Building here, in competition with five other prominent Varnish Houses, soley because all contractors figuring this work preferred to use Pratt & Lambert Varnishes than any other make.

The writer has had many years of experience in the retail paint and varnish business and has never handled a line of Varnishes or Paints that take as well with the painters and consumers as Pratt & Lambert's. ....

Our sales so far this year, have already equalled that of 1914. We attribute no small part of our increasing success with your varnishes to your advertising in national publications, attractive store and window matter, newspaper electros and movie slides, and special campaigns to painters, architects and home builders. We consider Pratt & Lambert Varnishes a very valuable asset to our business.

Expecting to go on increasing our business on Pratt & Lambert Varnishes, as we have in the past, We remain,

Yours very truly,
THE POCKRANDT PAINT & SUPPLY CO.,

RAMSAY'S

"MAKING GOOD"

The only way for paint to "make good" under the test of Canadian climate is to make the paint so good that it is worthy to bear the name RAMSAY.

Since 1842 we have manufactured the best paint we knew how to make—and since the first can was used "Ramsay's Paints" have been making good"—for us, for the dealer and for the man who finally uses them on the job.

Write us for prices on whatever you need. Ours is "The Complete Line."

"The Right Paint to Paint Right."

A Business Decalogue

By GRAHAM HOOD

I. Thou shalt not wait for something to turn up, but shalt pull off thy coat and go to work that thou mayest prosper in thy affairs.

II. Thou shalt not be content to go about thy business looking like a loafer, for thou shouldst know that thy personal appearance is better than a letter of recommendation.

III. Thou shalt not try to make excuses, nor shalt thou say to those who chide thee, "I didn't think."

IV. Thou shalt not wait to be told what thou shalt do, nor in what manner thou shalt do it, for thus may thy day be long in the job which fortune hath given thee.

V. Thou shalt not fail to maintain thine own integrity, nor shalt thou be guilty of anything that will lessen the good respect for thyself.

VI. Thou shalt not covet the other fellow's job, nor his salary, nor the position that he hath gained by his own hard labor.

VII. Thou shalt not fail to live within thy income, nor shalt thou contract any debts when thou canst not see the way clear to pay them.

VIII. Thou shalt not be afraid to blow thine own horn, for he who so faileth to blow his own horn at the proper occasion findeth nobody standing ready to blow it for him.

IX. Thou shalt not hesitate to say "No" when thou meanest "No," nor shalt thou fail to remember that there are times when it is unsafe to bind thyself to hasty judgment.

X. Thou shalt give every man a square deal. This is the last great commandment, and there is no other like unto it. Upon this commandment hang all the law and profits of the business world.

From T.U.E.C. Special No. 32

The Most Information The Most Entertainment —and all Made-in-Canada

Here are a few of the features which make the October issue of MacLean's the best number yet put out by this aggressive magazine.

"The Woman Question," by *Stephen Leacock,* an article that presents a new viewpoint on a vexed question. It is presented in the virile, readable style of Canada's great humorist.

"Canada's Opportunity," by *Agnes C. Laut,* a powerful article on financial and trade conditions arising out of the war.

"Tryst," by *Alan Sullivan,* a short story that for sheer perfection of style equals anything that Mr. Sullivan has ever done.

"The Wicked Partner," by H. F. Gadsby, a light sketch of the Hon. Robert Rogers, written not from the political but from the human side.

"The Years of the Wicked," by *Hopkins Moorhouse,* a short story that is different from anything you have ever read before—one of the best things yet turned out by this rising young author.

"The New British Columbia," by *Norman Lambert,* an article on the Northern part of the mountain province which for vivid descriptive power has never been excelled. This is illustrated by a series of remarkably beautiful photographs of the Rockies.

"The Next Man Up," by *W. A. Craick,* an article on the men who are second in command of the big corporations of Canada. It gives an inside picture of the workings of some of the big railways and banks.

There are nine other stories and articles, all of a high order, and *our review of reviews department, which contains condensed versions of the best articles which appeared during the previous month in the magazines of the world. This is one of the biggest features of MacLean's Magazine and is in itself of such value that you need MacLean's for this department alone. There are twenty articles in the October issue carefully selected as the most informative and interesting, published the world over.*

Special Offer—To new subscribers only. In order to introduce MacLean's Magazine into homes where it is not now read, we are giving the magazine for eighteen months for price of twelve—see coupon below.

A Straight Talk from the Manager

Get Your Money's Worth

UNLESS you can definitely point to several cases where you have made or saved dollars through studying Hardware and Metal, you are not deriving the full benefit from your subscription.

¶ Some time ago a subscriber told of a customer who wanted a job done, requiring a large quantity of lead. The hardwareman submitted his tender, but it was so much higher than his customer had expected that he decided to defer having the work done.

¶ The next day the subscriber received his copy of Hardware and Metal and found that during the week the price of lead had dropped. He then submitted a new tender and landed the order.

¶ A close study of Hardware and Metal every issue will furnish you with information or ideas which cannot fail to make your business more profitable.

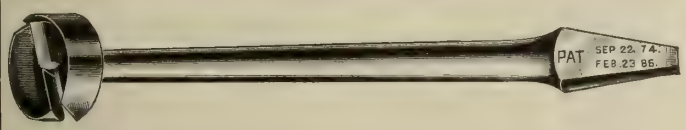
MONTREAL

CROWBARS

No. 102-A—CHISEL POINT

We offer you bars made of High Carbon Steel at the same price as you are buying the Mild Steel Bar elsewhere. Send us a trial order.

B. J. COGHLIN CO., LIMITED, Office and Factory: Ontario St. East, MONTREAL

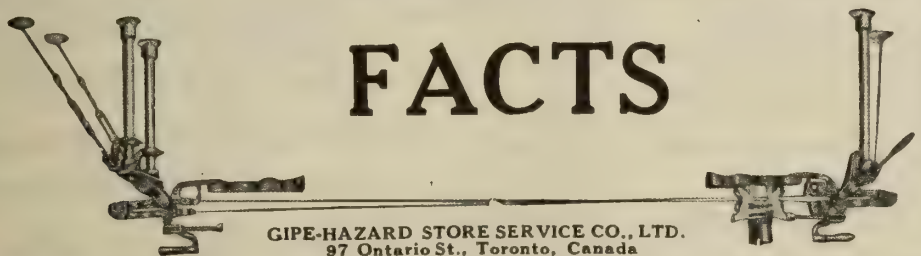


THE PROGRESSIVE MANUFACTURING CO.
Torrington, Conn., U.S.A.

FORSTNER BITS

bore their way right through tough, hard, knotty, cross-grained wood and leave a smooth hole and a clean surface. That's performance. THEY DIFFER FROM ALL OTHER BITS, BEING GUIDED BY THE RIM INSTEAD OF THE CENTER. That's scientific construction. They bore any arc of a circle and can be guided in any direction. That's adaptability.

Made for Brace—made for machine. Packed singly—packed in sets. That's convenience. And they sell to Wood Workers, Carpenters, Cabinet Makers and others. That's why you should sell them. Order through your jobber to-day.



FACTS

We can perform more functions by our modern wire carrier system, and with a greater degree of dispatch and certainty than can be accomplished by any other of this type of machine, all of which means that we can reach more points in a store and do so in a better and more satisfactory manner than has been accomplished heretofore. Remember our ten days' trial. You are invited to put us to the test.

GIPE-HAZARD STORE SERVICE CO., LTD.

DIRECTORY OF MANUFACTURERS

Hardware and Metal receives, almost daily, enquiries for the names of manufacturers of various lines. These enquiries come from wholesalers, manufacturers and retail dealers, who usually intimate they have looked through Hardware and Metal but cannot find any firm advertising the line in question. In many cases these firms are anxious to secure this information at once. This page enables manufacturers to keep constantly before the trade lines which it would not pay to advertise in larger space.

Gold Medals, Calcutta, 1883; International Exhibition, 1885; and First Order of Merit, Adelaide.

Big Profit and Satisfaction in Selling

"AYLMER" Force Pumps

They are certain to sell easily because it has several advantages over the ordinary style.

Has longer stroke, more power, and works easier.

While designed for hand use it can be readily converted into a Windmill Pump by the addition of a flat bar, which screws into the cross head at top.

It will be to your interest to write for full particulars now.

Aylmer Pump and Scale Company, Limited
Aylmer, Ont., Canada

FOOD CHOPPERS

Knives and plates made from wrought Swedish steel of finest quality. These choppers may be had tinned all over or enamelled white inside and japanned red outside. Stock carried.

F. W. Lamplough & Co., Unity Bldg. Montreal

NICKEL

SHOT—High and Low Carbon
INGOTS—Two Sizes 25 lb., 50 lb.

Electrolytic Nickel 99.80%

Prime Metals for the manufacture of Nickel Steel, German Silver, Anodes, and all remelting purposes. Our Nickel is produced as rods, sheets, strip stock, wire and tubes.

MONEL METAL

We are Sole Refiners of this natural, stronger than steel, non-corrosible alloy. Produced as rods, flats, castings, tubes, sheets, strip stock and wire. Ask for descriptive booklet.

Send inquiries direct to us.

THE INTERNATIONAL NICKEL COMPANY
43 Exchange Place, New York.

LONDON BAR IRON

High Grade

Our iron bars are tough, fibrous and corrosion-resisting, just such bars as your blacksmith friends want to use. Why not carry them in stock for your customers, or if you prefer, have them direct shipped from the mill?

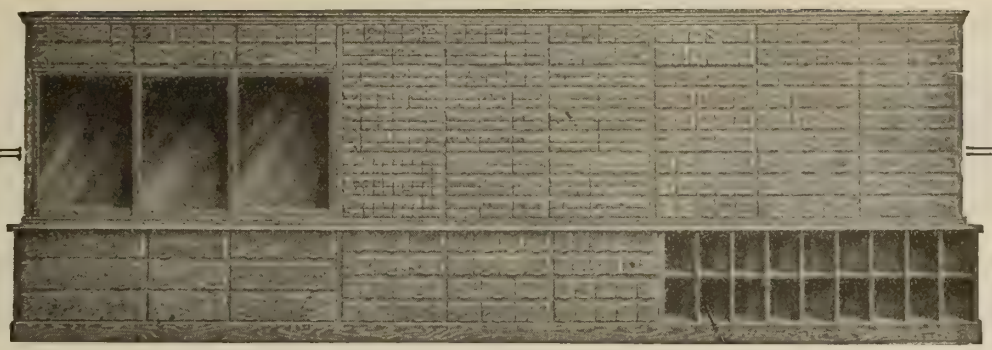
WHEN trade begins to boom it will be exceedingly difficult to jump in, overtake and pass the man who continued, even in times of depression, to paddle his advertising canoe.

It will require a high power campaign and lots of anxiety to do it. Even at that the persistent advertiser may beat the other fellow to it.



ATTRACTIVE, CONVENIENT, DURABLE, REASONABLE IN PRICE.

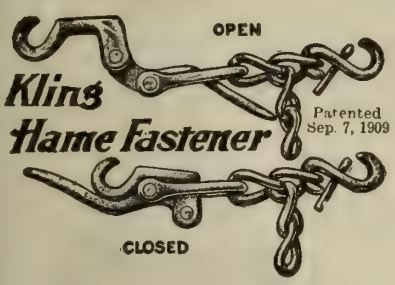
Our Patented Metal Shelf Boxes will improve the appearance of your store, and will enable you to give your customers quicker and more efficient service.

Advise us space you have available for shelf boxes and shelving, and we will sketch out plan and give you our best price for same.

Send for illustrated catalogue, it will interest you.

CAMERON AND CAMPBELL, TORONTO

MADE IN CANADA



Like the British Navy, there is no getting away from it. Always ready for instant use. On or off in a jiffy. Holds like grim death. So simple a child can fasten it. Keeps the hames always uniformly tight. Safe and Strong. A fast seller, with a big profit for the dealer.

All Jobbers should or do sell it. $2.25 per dozen.

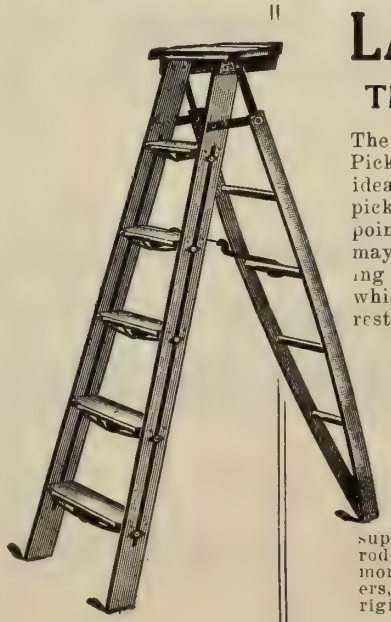
Lowest Quotations by Wire or Letter

Like the onward march of the glacier, the force of example is irresistible, but infinitely slow. Advertising, however, is like the snowstorm that covers the country in a single night—but don't forget that if you want to keep the country covered you have got to keep the snow falling or the heat of competition will melt it.

Fruit-Picking LADDERS

That Sell Fast



The "Perfect" Fruit-Picking Ladder is an ideal ladder for fruit-picking purposes. The pointed portion or legs may be turned up, making a long single ladder which easily and readily rests in the branches of the trees.

The "Perfect" will also make an excellent general purpose ladder, as it can be securely adjusted on uneven ground. The legs are connected by means of rounds, as in a straight ladder, while each step is supported by an iron-rodded truss with diamond-shaped iron washers, holding the rods rigidly in position.

Good Profit—Sure Satisfaction.

The Stratford Mfg. Co., Ltd

STRATFORD, CANADA

"I will say to anyone who is looking for the best thing in rifles, get a Ross and you will never be disappointed."

JAS. L. McLAUGHLIN, Hunter and Guide
Valley, Wyoming, U.S.A.

Mr. McLaughlin adds:—"Killed his first elk at 400 yards and the second at 300, and did it the easiest of anything I had ever seen. Such killing power I had never witnessed before, and when you hit an animal in the body he never gets away."

This experience is common to all users of the Ross .280. In his enthusiastic praise Mr. McLaughlin only echoes the appreciation of most skilful big game hunters the world over. No dealer in Canada can afford not to lay in a stock of Ross Rifles. Each rifle sold means a satisfied customer. Retail price $55.00.

Ross .303 Sporting Rifles are handsome, well-balanced and accurate weapons, hard hitting and reliable. The retail price is most moderate. $25.00-$35.00.

The Ross .22 Cadet Rifle is the official government arm for Cadet Corps. It is strong, reliable and accurate. Unexcelled for use on camp and trail. Retails at $12.00.

Dealers' discounts are sufficient to make the sale of any Ross Model a real help to the day's profit.

Sell Them Stanley's No. 1775 Garage Door Stay. Tell Them That Unlike Others It Permits Closing The Door With One Hand From Inside The Garage

THIS Wrought Steel Door Stay is applied in a safe position and is protected by the building from the elements when the door is closed.

Constructed of 1-inch Angle Iron, it has great strength and considerable leverage on the door. Throwing the door open sets the device in action, and **without going out of doors to grasp handles,** a slight pull on the attached chain releases the lock and draws the door shut.

When extended, it holds the door full open, making a firm, rigid barrier against the wind or other causes likely to slam the door. It is easily applied, out of the way, and no mortising is necessary.

Weight, 8½ pounds, net, per pair. Length, open 48 inches. Length, closed, 27½ inches.

Packed one right and one left hand in a box, each wrapped separately, complete with screws and four guide staples. Screws enclosed in separate package to prevent loss.

Furnished in Plain Steel, Japanned, Stanley Sherardized, Dead Black Japanned and Stanley Sherardized under Japanned finishes. The chain is tinned before Japanning.

Posts are dangerous in the dark; waste time in fastening and unfastening the doors; get buried in snow in winter, are expensive and soon rot, causing inconvenience and extra expense for replacement.

Our Exhibit at the Panama-Pacific Exposition is in Block 26, Manufacturers' Building, corner of 5th St. and Ave. D. Call and see us.

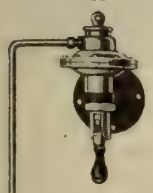
The Distant Control



The "STACK"
Distant Control System
gives control of the water heater from any part of the house.

It is an attachment (supplied with the Stack Heater) that enables you to light the gas from your kitchen or bathroom or bedroom, even if the heater is located in the basement. If you are downstairs (at the heater) and want hot water for the laundry or any household purpose, turn on the control at that point, and the heater is instantly in operation.

IT FILLS A LONG-FELT WANT FOR A LOW-PRICED AUTOMATIC CONTROL AND FOR THIS REASON IT WILL BE IN BIG DEMAND.

Stack Water Heaters

Are guaranteed to produce more hot water for a given quantity of gas, and to last longer than any other copper coil heater of equal capacity made.

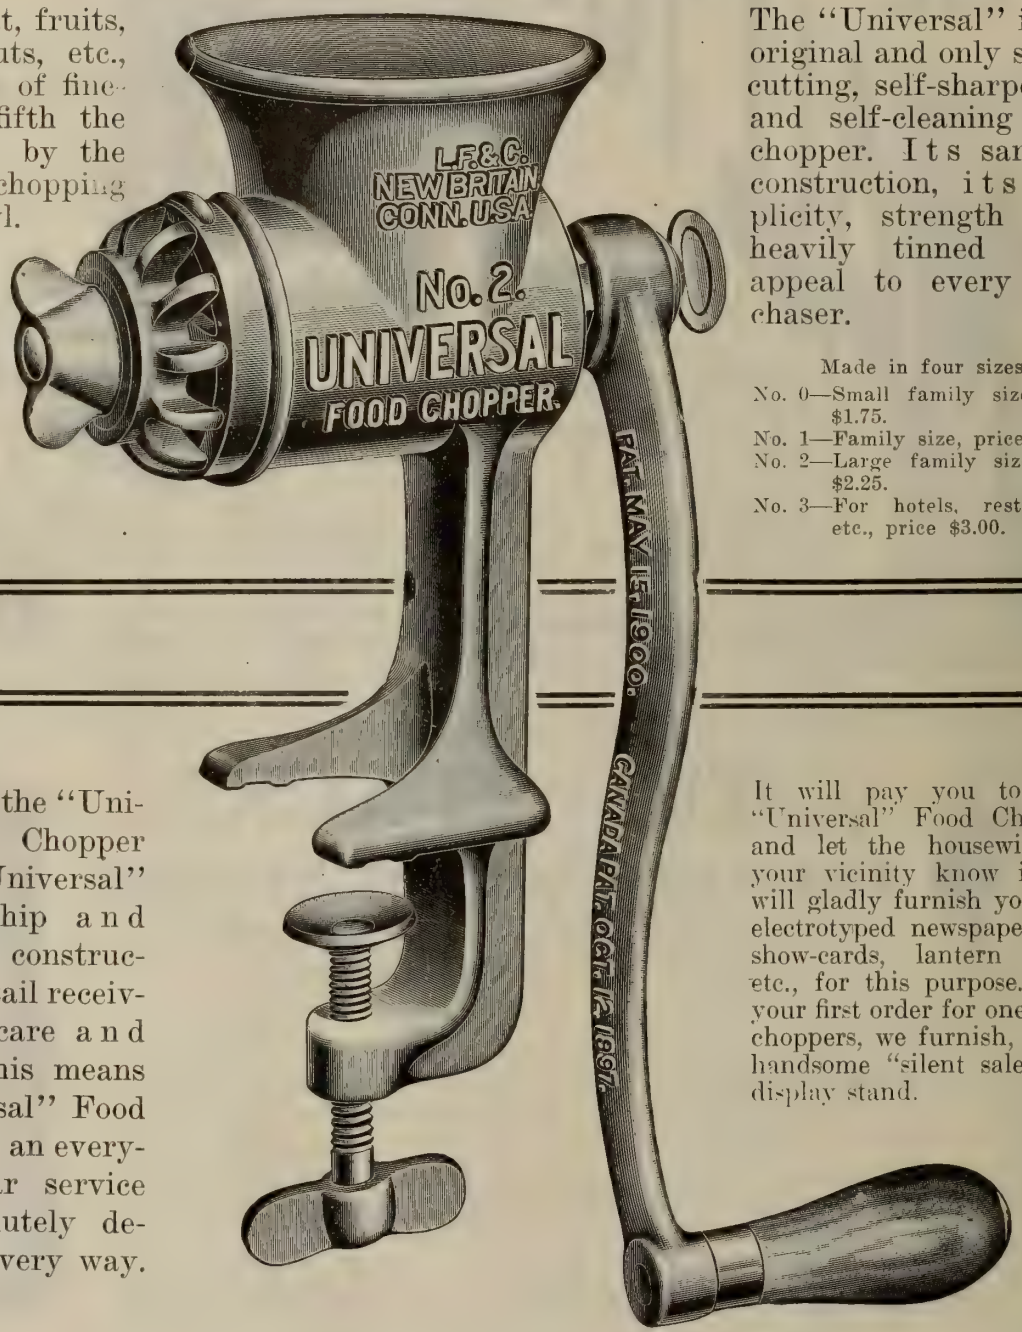
Drop a line for full details.

James Morrison Brass Mfg. Co., LIMITED
93-97 Adelaide Street West, TORONTO

DOES TWENTY MINUTES' WORK IN FOUR

Chops all meat, fruits, vegetables, nuts, etc., to any degree of fineness, in one-fifth the time required by the old-fashioned chopping knife and bowl.

Fifteen years of continued advertising on this point has created such an ever-increasing demand for the "Universal" Food Chopper that it is one of the most profitable of all household appliances to handle.



The "Universal" is the original and only shear-cutting, self-sharpening and self-cleaning food chopper. Its sanitary construction, its simplicity, strength and heavily tinned finish appeal to every purchaser.

Made in four sizes:

No. 0—Small family size, price $1.75.
No. 1—Family size, price $2.00.
No. 2—Large family size, price $2.25.
No. 3—For hotels, restaurants, etc., price $3.00.

Every part of the "Universal" Food Chopper is strictly "Universal" in workmanship and principle of construction—each detail receiving unusual care and attention. This means that "Universal" Food Choppers give an every-day-of-the-year service that is absolutely dependable in every way.

It will pay you to stock "Universal" Food Choppers and let the housewives of your vicinity know it. We will gladly furnish you with electrotyped newspaper ads., show-cards, lantern slides, etc., for this purpose. With your first order for one dozen choppers, we furnish, free, a handsome "silent salesman" display stand.

October is the big month in UNIVERSAL Choppers. If you haven't heard about the prize window trimming contest, write to your Jobber or direct to us for full particulars.

MAKE MONEY FROM GOOD PUMPS—PROFIT

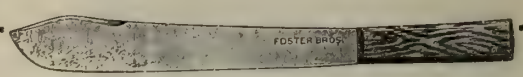
Unless a metal pump is made just right it will leak at joints or valves.

"Aremacdee" pumps do not give dealers who sell them trouble and loss from defective service in "Aremacdee" pumps sold customers.

Pumps for every use—hand or motor—force or lift — every type a dealer can sell.

All in the big catalogue. Ask for it—for dealer prices—for dealer terms.

The
R. McDougall Co., Limited
GALT, CANADA



Long years of experience in manufacturing up-to-date cutlery has placed the name of Foster Bros. as the "Seal of satisfaction" on every piece of cutlery we sell. Every safeguard has been provided to insure long life to our products, great care has been exercised in their making, and their finish is extra fine.

We offer a complete line of butcher knives, cleavers and steels. All hand-forged double shear steel, hand-ground and tempered in a manner that has made them world-wide for their wonderful cutting qualities.

No brand of cutlery is more favorably known today. It has been on the market for 25 years. Our cutlery is carefully inspected before leaving the factory, and is guaranteed to give satisfaction and to be the highest quality it is possible to produce.

Do you carry them? If not, ask your Jobber for particulars or write for descriptive catalogue.

JOHN CHATILLON & SONS

85 Cliff Street - New York City
Scale Makers Since 1835

ROYAL TEA KETTLES

Why we sell so many—

1—Rolled-in rim at cover opening.
2—¼″ polished steel one-piece bail.
3—Double seam joining seamless body and seamless breast soldered on inside.
4—Double seam joining spout and body soldered on inside.
5—Large handle, 5½″ long, fitted with ferrules to prevent splitting.
6—Reinforced brass ears and copper rivets soldered on inside. Ears hold handle upright.
7—Handle rest which prevents bail from striking breast.
8—Cover knobs held on with tinned steel bolts riveted over washers.
9—Satin finish inside kettle.
10—Entire kettle heavily nickelled and polished to a high finish.
11—Made from selected copper sheets of full weight.
12—Packed individually in card-board boxes.

June 3, 1914.

The American Rolling Mill Co.,
952 Rockefeller Bldg.,
Cleveland, Ohio.

Gentlemen:-

With reference to galvanized tubes made from American Ingot Iron, wish to say that in the spring of the year 1911 we placed with you a trial order for 50 tubes to be placed in our Lehman condensors, and on account of the very satisfactory results obtained, we are using these tubes exclusively in these condensors as we find they last from two to three times as long as charcoal iron tubes or the ordinary galvanized steel tubes.

These tubes are subjected to acid fumes and before using the American Ingot Iron Tubes, it was necessary to replace these about every two or three months.

Yours very truly,

THE NATIONAL REFINING COMPANY,

AEM:MS

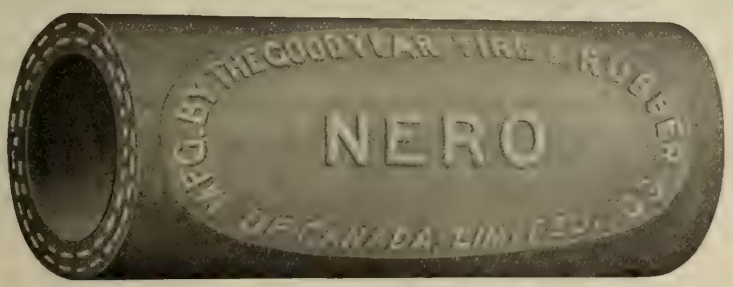
Hose You Can Recommend

You can't afford to sell hose you will have to make excuses for later on. When your customer gets poor service from the garden hose you sold him, he puts the blame up to *you*. *You* sold him the hose, in fact you are the only individual he dealt with in purchasing that hose. He may tell himself that the manufacturer is also at fault—but he doesn't excuse *you* for selling him unsatisfactory hose.

Goodyear Garden Hose is made for service. You can safely recommend it to your customers without any fear of having to explain later on why it didn't give good service.

Goodyear Garden Hose is made in two styles—one is known as "woven" hose and the other as "wrapped" hose. Both styles are illustrated and described below.

Nero Woven Hose—Plain or Corrugated Cover



"Nero" is an absolutely non-kinkable hose. This feature is due to its special seamless construction. There are no joints, as the fabric is woven right in the hose itself by special machinery. Made any length up to 500 feet.

Reliable Wrapped Hose—Plain Cover Only

The fabric in "Reliable" brand is cut on the bias and the edges are *stitched* together — not just stuck. The cover is made to stand rough handling and dragging over abrasive surfaces.

The "STERLING" Rotary Ash Sifter

A most convenient and efficient ash sifter that can be sold at a price within reach of all. To operate turn the crank and the ashes fall through to the can and the coal and cinders are automatically ejected into the hod hanging on the end, without raising any dust.

This sifter is constructed of steel, galvanized after being made up, so that with ordinary care, will last indefinitely and there is absolutely nothing to get out of order.

Write for our prices on "Sterling" Ash Sifter, Ash Cans, Coal Hods, etc.

The Thos. Davidson Manufacturing Co., Limited

Toronto MONTREAL Winnipeg

Make Quality the Foundation of Your Stove Trade and Tie Up to a Line of Stoves and Ranges That Has Proved Its Worth and is Here to Stay.

EVERY dealer knows from experience that there is no other article he sells that will give him more trouble and loss of trade than a poor Range, while on the other hand the sale of a good Range makes satisfied and increased customers, and brings a lot of other business to his store.

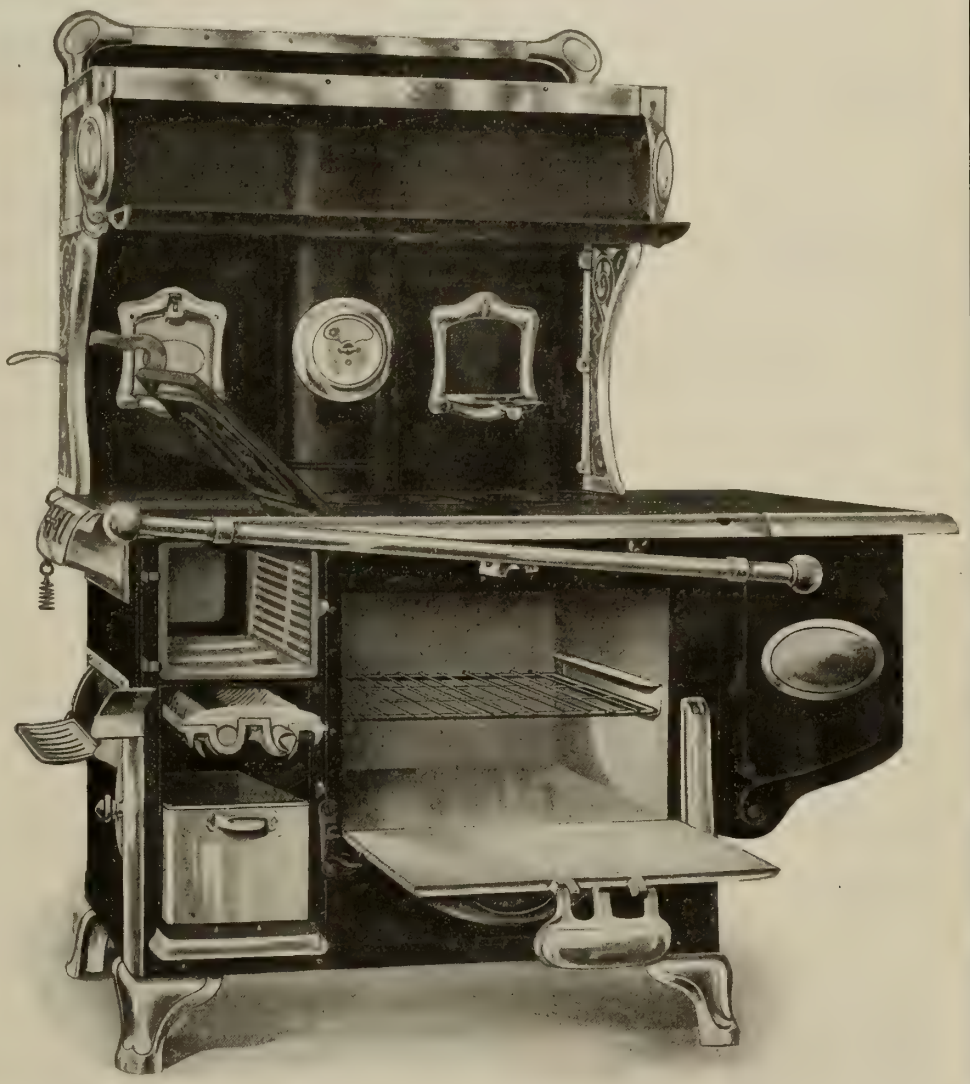
A Range should not be judged entirely from its external appearance. The dealer must rely largely upon the knowledge and responsibility of the maker to know that all internal parts are absolutely correct.

THE UNIVERSAL FAVORITE has built up, for DEALERS who handle them, a most satisfactory and profitable STOVE TRADE. The sale of a UNIVERSAL FAVORITE in a district means the sure sale of a number of others.

The Appearance, the Finish, the Workmanship, and the High-Grade Material in this Range put it in a class by itself. You have the courage of your convictions when selling it, it has so many strong points.

Every Dealer has customers who are willing to pay the price for a Range that will give absolute satisfaction and last for years. THE UNIVERSAL FAVORITE is specially built to meet the demands of this class of buyers, and the price is no higher than many other ranges offered in competition.

Put THE UNIVERSAL FAVORITE on your floor — it will prove the most profitable Range you ever handled.



Made in Two Sizes—19 and 21-Inch Ovens.

High Closets furnished in Standard or Tile Finish, as desired.

THE UNIVERSAL FAVORITE is made of Copper Bearing, Rust-Resisting Steel, and is built to last a lifetime. ORDER A SAMPLE OF THIS RANGE, EXAMINE IT, WEIGH IT, MEASURE IT, TEST IT BY EVERY MEANS. IF IT IS NOT THE MOST SALEABLE RANGE YOU HAVE EVER HANDLED, RETURN IT AT OUR EXPENSE.

Always a Bull's Eye

Every time you sell a box of Dominion Shot Shells or Metallics, you score a Bull's Eye with the buyer.

And a pleased customer means a steady one.

He will come back to you for other hunter's supplies, and his satisfaction and confidence in you is reflected upon every one of his associates.

In just this way is a good, substantial, sporting goods business built up.

Dominion Ammunition contains every element that enters into the making of a perfect shell or cartridge — materials, machines, men — the very best of each.

The nation-wide interest in target shooting has resulted in a large demand for Dominion .22 Long Rifle target cartridges—loaded with Smokeless, Lesmok or Black Powder. These are the Cartridges used by Canadian Cadets in matches and the large majority of Canadian Rifle Clubs.

You can sell such ammunition.

It is repeat orders that count, and those who once shoot Dominion Ammunition always repeat. When they buy from you once, they are your customers always.

Keep your stock complete. Don't miss a single sale.

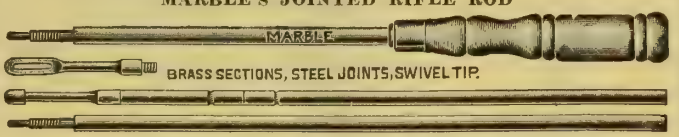
TRADE MARBLE'S MARK GUN "TOOLS"

These Marble specialties for men who shoot are the result of the creative genius of a pioneer hunter and all-around sportsman who knows the shooter's needs and appreciates what it means to have shooting accessories that are RIGHT.

Quality is the watchword in the Marble factory. Therefore when you sell Marble goods you make friends of shooters who want equipment they can depend upon.

MARBLE'S JOINTED RIFLE ROD



This Rod Will Not "Wobble," Bend or Break at Joints

As solid as a one-piece rod. A long steel dowell enters the recess in the solid brass section and imparts to the rod special rigidity. Furnished with jagged and slotted tips. Made for all lengths of barrel and all calibers from .22 to .50. List price **$1.00**

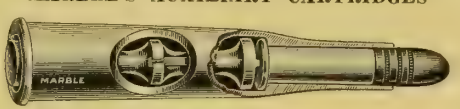
MARBLE'S RIFLE CLEANER

THE SPRING TEMPERED SPIRAL STEEL CORE OF MARBLE'S CLEANERS

A Trade Builder and Profit Maker for You

Brushes being a little smaller than the bore allows the spiral spring to force but one side of each brush against the bore. Thus they follow the twist, into every angle of the entire rifling and RAPIDLY remove lead, rust or powder residue. Exceedingly durable. Fits any standard rod. List .... **50c.**

MARBLE'S AUXILIARY CARTRIDGES



For .22 H. P.

For target practice or shooting small game with a heavy caliber rifle.

The device is fitted with its own firing pin, and firmly holds a real cartridge. It is loaded in magazine or breach. Firing pin of gun strikes secondary firing pin, exploding cartridge. The bullet being set into rifling, starts with a twist and cannot strip nor become deformed. Approved by officers of the Army and Militia.

Made in all practical sizes. List ..... **75c.**

MARBLE'S SHOT GUN CLEANER

Made to Fit All Standard Rods

Constructed same as rifle cleaner, except that each section is composed of twelve washers of gauze held together with fibre washers. The spiral core gives equal pressure from chamber to choke and with one thrust through the barrel it covers the entire circumference.

Gauges 10, 12, 16, 20 and 28. List ..... **75c.**

MARBLE'S NITRO-SOLVENT OIL

Best rust remover made. Cleans and polishes rapidly. A perfect lubricant. Once used, always wanted.

Two ounce bottle. List ..... **25c.**

Six ounce can. List ..... **50c.**

MARBLE'S ANTI-RUST ROPES

Keep the bore in perfect condition. Rusting and pitting are impossible. One oiling lasts for years.

For rifles and shotguns. List ..... **50c.**

For revolvers, **25c.**

Don't hide the goods you want to sell

With the Pexto Plier Display you can put the best sellers of a famous line where they'll attract trade without taking up a lot of room and with no effort on your part.

Handsomely finished in four colors. Large enough to command attention; small enough to be easily handled—exact size 22 x 28 inches.

Goes anywhere in the store, in the window, on the wall, on the counter—it stands or hangs.

Puts the most popular styles of pliers before the customer at a glance, doing away with handling a lot of goods over the counter and taking your clerks' time.

Can be varied to meet your own particular needs, with Linemen's, Electricians', Milliners', Jewelers', Opticians' and other styles of pliers.

There are 60 styles and 175 sizes in the Pexto line, including both box-joint and lap-joint patterns. Classified facts about entire line on back of display.

If your jobber can't supply you with a Plier Display, write us.

Shooting Season Under Way

Elaborate Display of Guns and Rifles by Moose Jaw Firm—How Auto Liveries are Encouraging Hunting Parties—Many Advertisements by Hardware Firms Featuring Hunter Supplies.

ON this and the following page are shown two reproductions of displays of hunters' supplies in Latham's Hardware, Moose Jaw, Sask. The display of rifles and shot guns is one of the largest and most attractive in Canada. The window display shown on this page was arranged by F. S. Keller. The display, although inexpensive to install, attracted a great deal of attention. A display of this kind is particularly seasonable at this time of the year when the shooting season is just getting well under way.

The main body of the display is composed of boxes of loaded shells, neatly arranged on the floor of the window.

A gun display rack, made of ½ inch pipe, nipples and tees, served as a display stand for showing shot guns. Neat price cards were attached to each gun. Manufacturers' display cards were also used in arranging the display.

The striking gun display, shown on the following page, is in the sporting goods department of Latham's Hardware. The large display case, at the time the photograph was taken, contained 119 shot guns and 75 rifles, valued at $4,840.50.

The large wall case is devoted entirely to the display of hunters' supplies. An examination of the photograph will disclose the fact that display space has also been provided for a large range of ammunition.

Spaces have been allotted for various makes of guns and rifles, as indicated by cards bearing the makers' names and attached to the display case.

Drawers below the ledge have been provided to accommodate surplus stock and other sporting goods lines.

While the stock of guns and rifles carried in Latham's Hardware, is an exceptionally large one it is not uncommon to find heavy stocks of guns and ammunition in hardware stores in many parts of Canada where shooting abounds. Canada is noted for its haunts of game, and each fall, thousands of sportsmen spend considerable time in the woods. The interest that is being taken in shooting in Canada this year is greater than in any year in the past, and those in close touch with the situation are of the opinion that sales of guns and ammunition this fall will be greater than in any previous year.

Display arranged by F. S. Keller for Latham's Hardware, Moose Jaw, Sask.

It is true that a good many sportsmen have enlisted for active service, but the additional interest which is being taken in shooting by those who have not enlisted will have a tendency to increase the demand for arms and ammunition.

Hardwaremen can do a great deal towards creating local interest in hunting. Window displays are good stimulators. They always attract considerable attention. Everybody from the small boy up is interested in a display of firearms and more especially during war time.

Newspaper advertisements are also particularly valuable in

Extensive display of rifles, guns and ammunition in Latham's Hardware, Moose Jaw, Sask.

creating interest in shooting. Just at the present time hundreds of hardware firms advertisements in various parts of Canada are featuring hunters' supplies.

Auto Liveries Encourage Shooting

Extra inducements are being offered to shooters this year by auto liveries. Owners of liveries are doing all they can to encourage hunting excursions. The auto livery owners in many towns are advertising in the newspapers that they will give special rates for shooting parties. This should encourage many sportsmen both amateur and professional to go out on short hunting trips. One of the objections sometimes raised a few years ago by would-be hunters in some towns was that it took too long to get out to the woods. With the advent of the auto his objection was overcome and to-day many thousands of private auto owners are real live hunting enthusiasts. Those not owning autos can secure very reasonable rates from auto liveries, who as previously stated are now offering their services to hunters.

Recent Advertisements

Fraser & Enticknap, Weyburn, Sask., in an advertisement published the day before the opening of the shooting season stated as follows:—"Mr. Shooter! Is your outfit complete for to-morrow? Are you ready for the hike to your favorite shooting ground? Better get busy and look over your outfit, and if not complete, come to Fraser & Enticknap's. We have the necessities you require to make your shooting trip a pleasant and profitable one for you. You need shells. We have the following well known makes ——— ——— —— ———. We bought before the raise and can save you money."

In the same issue of the newspaper in which Fraser & Enticknap's advertisement appeared there were also advertisements by The Weyburn Hardware & Furniture Co., and the Hoshal Carmichael Co., featuring in each instance, hunters' supplies.

Wm. Chalmers, Deloraine, Man., also devoted considerable space recently to a newspaper advertisement featuring shot guns and ammunition. The advertisement, illustrated with a cut of a shot gun, referred to two special guns as follows: "Our $12.50 Belgian gun is the best value we have ever offered, and we think the best ever sold anywhere at the price. Our next grade is $15, and remarkable value as well."

The George Taylor Hardware Company, Cobalt, opened the hunting season by arranging an exceptionally novel and instructive window display of hunters' supplies. In addition to the window display, considerable space in the firm's newspaper advertisement was used in giving a talk on the hunting season, and the firm's ability to equip the hunter with all necessary supplies. Prices were quoted in a long list of rifles and shot guns of various kinds. In the same advertisement reference was made to the window display which was being shown at the time.

T. McAvity & Sons, St. John, N.B., in a recent advertisement used considerable space to feature hunters' supplies. Prices were quoted on every article mentioned in the advertisement. Neat illustrations were used to brighten up the advertisement. A few of the lines featured were, decoys, shell bags, electric lanterns, alcohol stoves, sportsmen's knives, pistol holsters, rifle and shot cartridge belts, hunting axes, hunting knives, thermos bottles, gun cleaners, sporting whistles, reloading sets, rifles, guns and ammunition.

Those mentioned are only a few of the many hardware firms whose advertisements during the past few weeks have featured hunters' supplies.

Playing Up Auto Accessories

J. H. Ashdown Hardware Co. Features Auto Accessories Along With Other Lines in a Full-Page Newspaper Advertisement—Auto Owners Patronizing Hardwaremen

ON this page is shown a reproduction of a full page advertisement of the J. H. Ashdown Hardware Co., as it appeared in the September 17 issue of a Winnipeg evening newspaper.

There are many striking features in the advertisement of interest to retail hardwaremen. A great many seasonable articles are illustrated, described and priced. A glance at the advertisement is sufficient to show that it is one that would interest hundreds of people. One of the most striking features, however, is the number of auto accessories offered in the advertisement, thus indicating that the firm carries a good stock of auto accessories, and considers this line to be of such importance as to devote to it considerable space in the advertisement.

The first article offered in the advertisement is a spring spreader which is illustrated and described. The price is quoted at $1.50. Side lamps and tail lamps for Ford cars are featured in two panels near the top of the advertisement. In the upper right hand corner automobile horns, ranging in price from $2.50 to $4 are illustrated, described and priced. Automobile locks, patches and tire covers are also featured. A special sale of Ford auto tires at $11 is announced. The tires are offered for sale on Saturday, at the advertised price.

Electric headlights and bulbs for Ford cars are also offered to car owners.

Gasoline reserve valves, and automobile oil gages, both for Ford cars are also prominently featured. Tubular flashlights, used extensively by motorists are also offered at a special price for Saturday selling.

It will be noted that most of the accessories featured in this advertisement are for Ford cars. It is estimated that there are approximately 80,000 Ford cars in use in Canada at the present time—and the number is steadily increasing.

The army of Ford car owners in Canada alone has tremendous purchasing power. The Ford accessories featured in the accompanying advertisement are only a few of hundreds which are now being manufactured and offered to car owners through retail hardware firms, and garages.

For a few years after the advent of the automobile, the sale of accessories was to some extent controlled by the garages. This of course does not apply to the sale of wrenches, chisels, hammers, pincers, etc., which have always been controlled by the hardware trade.

The tendency now is for the hardwaremen to carry the accessories which were formerly in the hands of the garage owners. Manufacturers of accessories are trying hard to distribute their products through the channels of the hardware trade. The automobile accessory business has grown at an enormous rate during the past few years, but those actively engaged in the accessory business claim that the accessory business, as far as volume of sales is concerned, is only in its infancy.

In addition to Ford owners there are many thousands of owners of other makes of cars—they are all prospective purchasers of accessories. A great many car owners avoid the garages as much as possible, preferring to do their own repair work at home. The result of this has been, that in every community there are car owners who since purchasing cars, have purchased supplies to equip a modern repair shop on a small scale.

Repair kits of various kinds have found a very large sale. Special tools for car owners have been produced in large numbers and in great variety. Some have proved good sellers—others have not.

In addition to the big demand for tools and accessories of various kinds there is the ever increasing demand for oils and greases of various kinds, gasoline, polishes and numberless other

Making Up for Lost Business

Machinists Tools, Electrical Supplies and Specialties and Sporting Goods Added to Stock of Verdun, Quebec, Merchant—Making up for Decline in Demand for Building Supplies.

It is a well known fact that when building operations are curtailed, the retail hardware merchant is one of the first to feel the effects. In some of the suburbs of our larger cities there are hardware firms, who, prior to the war, were doing a large business in builders' hardware. Many of the suburbs were growing rapidly. Whole blocks of houses were springing up, and the hardwaremen were kept exceedingly busy. The financial stringency before the war affected the building trades to a considerable extent, but the climax was reached when the war broke out and people began to double up. Two and three families would move into a house which had previously been occupied by one.

Verdun is not a manufacturing centre. The city fathers left it to the neighboring suburb of Point St. Charles to secure the big industries. She was content to take the people, and leave the smoke and noise within the borders of Montreal. People live in Verdun; they labor in Montreal.

Oscar Fauteux, of Fauteux Co., did a good volume of builders' hardware business for a number of years prior to the war. With the outbreak of the war and building operations curtailed, Mr. Fauteux found it incumbent on him to find new lines. He took on a number of new lines, some of which he had previously neglected. Some of these were comparative failures, and were dropped comparatively quickly; others proved money-makers.

It is only natural that in a city afflicted with growing pains like Verdun, where many of the people are their own architects and builders, there is, in normal times, a demand for carpenters' tools. Fauteux, Ltd., have an exceptionally fine display of tools, mostly for carpenters. The demand for machinist tools had been almost negligible. As a matter of fact this business had been going to the stores of Montreal.

Added Machinist Tools

Mr. Fauteux added another section to his already long wall case, and put in a splendid assortment of machinist tools of a well-known brand. Although Verdun has no factories, there are several mammoth ones right at its door, including the Canada Car, the Grand Trunk shops, and the Montreal Rolling Mills. Some of these were making munitions of war, which created a demand for finer tools, including calipers, micrometers, and gauges, etc. Business was good right from the start, and it was found necessary to increase the stock twenty-five per cent.

Speaking to the writer, Mr. Fauteux said:—"The increased business in this line almost made up for the falling off in other lines of tools. It certainly surprised us; we never thought we could capture such a good share of the trade which had been going from here to Montreal, so quickly. Of course, the fact that we carried a nationally advertised line made it much easier for us."

Electrical Specialties

Now for the second venture—electrical supplies and specialties. The firm's attention in boom times had been so much occupied with building, they had neglected to a certain extent the up-to-date woman who irons and cooks by electricity. They found in these expensive items another productive source of revenue. And not the least among them was the electric flash light. To quote Mr. Fauteux again:

"We sold these pocket flashlights like hot cakes for a dollar and a half up. I don't know where they got the money for them, but they bought them just the same. Lots of people wanted them for their motor boats, and," he added, "I

Building Up An Accessory Department

How One Hardware Firm Started To Sell Auto Accessories In a Small Way and Built Up a Connection

MUCH has been said and written during the past year regarding auto accessories as a hardware line. Some merchants are selling auto accessories in large numbers, while others have not met with very much success in securing the trade of the autoist.

Other retail hardware firms have even gone so far as to equip garages to run in connection with their hardware store.

The success or failure of an auto accessory department will depend largely upon local conditions and the efforts devoted to the line by the merchant. In a district where there are very few automobiles it would be very unwise to put in a heavy stock of auto accessories. Unless there is a need or demand for goods there is no justification for a merchant putting in a stock unless the merchant is of the opinion that a demand for the goods can be worked up.

There are no doubt some retail merchants who would not be justified in putting in a stock of auto accessories, but on the other hand there is danger of other merchants overlooking opportunities which do exist.

Auto accessories have proven themselves to be a mighty nice and profitable line for some merchants to handle, but they are not a road to sudden wealth. Just like any other line they have to be displayed, advertised and pushed.

Most lines of auto accessories carry a very fair margin of profit, more in fact, than many other lines which are usually carried. Care, however, has to be exercised in buying. There are certain accessories that are as staple as nails, while others are not

Most of the firms now making a success of the auto accessory line will tell you that they started in a very small way, with a small stock of accessories. As the demand grew, and auto owners asked for other lines the stocks were enlarged. One merchant who has worked up a very nice connection with the auto owners in his community, started at first to solicit the trade of autoists for polishes, oils, greases, dry cells, etc. The merchant and his salesmen observed that very frequently the auto owners would purchase pliers, wrenches and other small tools.

Inquiries for bearing scrapers, spark plugs, patches, cement and other lines became quite frequent, in fact so numerous did they become that the head salesman took the matter up with the proprietor and suggested that a small stock of most-called for articles be placed in stock. Before ordering the goods, however, it was agreed that for one week, the clerks would secure as much information as possible from auto owners, regarding their requirements.

The plan followed out was for each clerk, when waiting on an auto owner or chauffeur, to state that the firm intended to place in stock a line of auto accessories and want to have the opinion of the auto owners as to which would be the best lines to carry in order to meet the demand. Each clerk kept a list of the articles suggested by the autoist, and by the end of the week the opinions of a large number of autoists had been received.

The articles most frequently mentioned were listed and a small opening order was placed. Manufacturers and wholesalers were asked to send in catalogues of all auto accessory lines which they manufactured or carried in stock.

A portion of one of the silent salesmen was used to display accessories and a start was made to push the new line.

When auto owners visited the store for other lines, their attention was directed to the stock of accessories. Within a short time it was found necessary to add new lines, and in a year's time the department had grown to a considerable size. Even now the investment is not heavy, considering the amount of business that is being done.

A great many special orders are received, but in most cases the auto owner is willing to wait a few days until the goods are ordered from the wholesaler or manufacturer.

Window displays frequently feature auto accessories and tools, etc. Occasionally newspaper advertisements refer to the firm's ability to supply the needs of the autoists.

An auto filling station has been installed in front of the store, and although the profit on gasoline is not very great, the firm has found that the sta-

HARDWARE & METAL

CANADA'S ONLY WEEKLY HARDWARE PAPER

Vol. XXVII. TORONTO, SEPTEMBER 25, 1915 No. 39

WAR TAXES IN ENGLAND

WHAT is probably the greatest war budget in the world's history, was introduced in the British House of Commons this week by Rt. Honorable Reginald McKenna. In order to raise the needed amount of revenue and prevent this year's deficit from rising above present figures, the Government proposes to adopt stern measures of taxation. The taxes are the most far-reaching in the history of Great Britain and involve even free trade. Bicycles, automobiles, moving picture films, clocks, watches, musical instruments, plate glass and hats will pay a tax of 33 1-3 per cent. ad valorem. The one cent mail will be abolished entirely, and the rate on telegrams increased from 12 cents for 12 words to 18 cents. There is also an increase in telephone charges. The sugar tax is also largely increased. The principal blow falls on incomes. The existing tax is advanced 40 per cent. and its scope is so enlarged as to include those earning as low as $14 per week. Spirits and beer are untouched by the new schedules.

RAZOR MAKERS' STRIKE

OWING to the difficulties which have developed between the employers and workmen engaged in making razors, it is almost impossible to buy razors in Sheffield at the present time. For some time the output of razors had failed to meet the demand, and when the strike occurred there were very few stocks in the hands of makers. In addition to the huge demand for razors from military and naval authorities, the demand from other sources, since the outbreak of the war, has been the greatest in the history of Sheffield. The extraordinary demand is due to the absence of German razors from the market. One of the most regrettable and serious features of the strike is the cutting-off of supplies to the army and navy, as a razor is a necessary part of every soldiers' kit. Another unpleasant feature of the strike is the manner in which the efforts of the Sheffield committee, which is receiving gifts of old or spare razors for the troops at the front, have been affected. Owing to the scarcity of razors a call was sent forth for old or spare razors. These were to be put into good shape in Sheffield and forwarded to the War Office. Owing to the strike the workmen engaged in fitting up the old razors have also quit work, with the result that the Sheffield committee has had to make an arrangement whereby a number of barbers have been employed to fit up those razors which merely require to be whetted and set. Canadians have so far collected over 25,000 old or spare razors. Between five and six hundred men are affected by the strike of razor makers. The demand was for an increase in pay of 12½ per cent. for commercial work, and 10 per cent. for Government work. An offer of 10 per cent. on the former and nothing on the latter was rejected by the workers. Conditions in other branches of the cutlery trade are said to be excellent and the volume of business passing at present would be considered good even in normal times.

GERMAN HARDWARE SITUATION

A RECENT report of the American Association of Commerce and Trade, Berlin, Germany, gave some interesting information regarding the German hardware situation. Investigation revealed a ranging degree of activity in the different branches of the hardware industry. One large manufacturer of builders' specialties reports that his output at present is but half his peace production, the falling off being attributed to high prices and stagnation in the building trade. Decreased activity in the building trades also reacts on works producing locks, and the increased cost of raw materials has caused a rise of 5 to 10 per cent. in the finished product. The demand for rivets and screws is limited but the factories are in a position to keep their working forces together. Extraordinary activity is reported from establishments furnishing supplies for the army and navy, day and night shifts are the rule and by turning over part of the orders to other factories less busy, the condition of the latter is improving. Activity in the tool trades is said to be satisfactory, and although general consumption has declined, trade in axes, hatchets, hammers, files, and similar tools is

brisk. Prices have been adjusted in accordance with manufacturing costs. Factories making accessories for bicycles and automobiles are said to be well employed, while the harvesting of crops created a good demand for harvest tools. It is claimed that the other metal trades are extremely busy and are obtaining good prices on orders for military supplies.

ADVANCE ON WIRE

THE market reports this week give details regarding the latest advance in the price of wire of various kinds, staples, etc. This advance has followed the advance in the price of wire nails which took place two weeks ago. Although it is hard to get those in close touch with the situation to express an opinion regarding future quotations on wire nails, it is rumored that a further advance of possibly ten cents per keg will take place in the near future. The American Metal Market in referring to the recent advance in wire products states, in a Pittsburg report that the advance in wire products of $2 a ton effective, on Monday of this week, carries prices to a rather good level. Inasmuch as the differentials between products were modified at various times this year prior to the present advance, a single comparison between the new prices and the high points of previous years cannot be made. From May 1, 1909, until recently there had been no change in differentials otherwise than the advance in galvanizing from 30c to 40c on October 12, 1912.

The new price on plain wire, 1.60c, represents a total advance this year of $4 a ton and brings the price up to the high points of 1913 and 1911, and $1 a ton above the high point of 1911. In every year from 1899 to 1910 inclusive, the high points were above 1.60c. The high point of 1907 was 1.90c.

As the differential between plain wire and wire nails is now 15c instead of 20c, the nail price of $1.75 is still five cents a keg under the high points of 1911 and 1913.

As painted barb wire is now 30c above plain wire instead of 20c, the present price of 1.90c is the highest since 1909.

Galvanized barb wire is still higher in proportion, as there is the 10c additional spread for barb wire over plain wire, and 70c more for galvanizing, against 40c in 1913 and 1914 and 30c prior to October 12, 1912. Galvanized barb wire at 2.60c is the highest since 1903.

WAR ORDERS

WAR orders are still the big factor in manufacturing industries connected with the metal trades. In the steel trades the brisk demand for forgings and rounds for shells continues, and the demand for rounds is much greater than can be met by the capacity of Canadian plants. While it was feared some months ago that the iron and steel industry might be affected to some extent by a possible shortage of labor, or that the demand would grow to such an extent that a shortage would occur in coke, pig iron, etc., at the present time the feeling generally expressed is that no serious restrictions will be placed on production for war supplies, particularly as the domestic situation in this direction shows little signs of returning to normal.

However, if the demand for steel for the manufacture of shells larger than those now being produced becomes general, which seems altogether probable, it will likely tax our mills to their very utmost, especially in the matter of billets, as the larger shells will be made from this class of product. There are indications that orders for large shells have already been received or are expected in the near future. Several plants are being equipped for the production of 6-inch shells and larger, one firm in Montreal hoping to start making the former in about a month. Two weeks ago we announced that large orders for shovels had been placed with Canadian shovel manufacturers. This week an announcement is made to the effect that Canadian manufacturers have received large orders for axes. Orders for many other lines have been placed through the purchasing department of the Canadian Pacific Railway, acting for the British War Office.

EFFICIENT SALESMEN

THERE is a certain amount of truth in the old saying that goods well bought are half sold, but there are conditions where goods which had been bought on the most desirable basis would never sell.

The fact of the matter is that the presence of good salesmen is fully as important as the advantages of having secured the goods on the best terms. Splendid value alone will not always sell goods unless there is someone there to demonstrate the value. Neither for that matter will a good salesman be able to create business unless the goods he offers have the value. Both sides of the proposition are important and both are indispensable. The maintenance of a thoroughly efficient sales staff is, therefore, a problem which every dealer must face. If a merchant can keep his salesman up to a high standard of efficiency, he need not worry about his volume of business. On the other hand, the merchant who does not maintain a high standard will not get far ahead, no matter how well equipped he may be in other respects and how energetic his methods in every other way. The first step in maintaining efficiency on the sales staff is to carefully watch the matter of appointments. Shrewd selection and rejection of applicants will help more than any other single factor. Having good material to work on in the first place is the prime necessity. With good material, careful training will develop a competent staff.

HARDWAREMAN APPOINTED SHERIFF

One of the most widely-known hardware men in Western Ontario, T. I. Thomson, of Owen Sound, ex-M.P., has been appointed sheriff of the County of Grey. Mr. Thomson is head of the firm of T. I. Thomson, wholesale and retail hardwaremen. He has been a citizen of Owen Sound for the last twenty-eight years, and during that period has been honored with almost every public position in the gift of his fellow citizens. He has been successful in his business undertakings, and besides the large hardware business of which he has been the head, he is president of the Farrar Transportation Co., and has other extensive business interests.

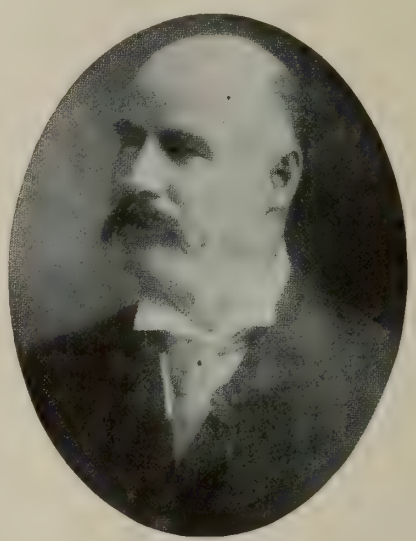
Mr. Thomson was born in Napanee, Ont., in 1855. He was educated at Brampton and Uxbridge, and at the latter place got his first insight into the retail business. He went to Kincardine and later to Goderich, where he continued in the mercantile line. In 1880, in company with his brothers, John A. and Joseph A., he started business in the hardware line in Port Elgin, under the firm name of Thomson Bros. He continued in Port Elgin till 1888, when he moved to Owen Sound, taking over the long-established hardware business of the late A. M. Stephens. He conducted the business personally until three years ago, when it was converted into a joint stock company under the firm name of T. I. Thomson, Ltd., his son, T. Walden Thomson, and Leonard Ferguson being taken into active partnership. These two gentlemen who have been connected with the management for years, will carry on the business. They are practical hardware men of life-long experience in the trade, and the business will be in capable hands.

While active in business, Mr. Thomson has always found time to mingle in public affairs, and takes a deep interest in all municipal and political questions. His first municipal experience was obtained before coming to Owen Sound, for in 1885-6 he was a member of the Port Elgin town council. Eight years after moving to Owen Sound the ratepayers recognized his ability and he served the town as reeve in 1895 and 1896. Mr. Thomson was elected mayor of the town in the election of January, 1897, and he was given a second term in 1898. As chief magistrate he ably administered the affairs of the town, and five years later, in March, 1903, when he presented himself as a candidate for the Dominion House, as the nominee of the Conservative Party in North Grey, he was elected. Ever since he was a young man Mr. Thomson took an active interest in politics. He has a most pleasing personality which brings him closely in touch with people of all classes. In the capacity of public speaker he has always been impressive and resourceful and as a campaigner always a source of strength to his party. Mr. Thomson takes his new office at once.

CANADIAN FLAXSEED FOR HULL

A most striking and important result of the war has been the diversion to the United Kingdom of large quantities of flaxseed, cottonseed, copra, ground nuts, palm kernels, etc., which would in the usual course of events have gone to Germany and to other Continental countries.

The returns of the imports of the principal oilseeds into the United Kingdom for the first seven months of the present year as compared with the same period



T. I. THOMSON

of T. I. Thomson & Son, Owen Sound, appointed sheriff for Grey county.

of last year afford interesting reading, more especially as the comparison is made for a war period as against a pre-war period.

The chief feature of the returns which have most importance to Canadian interests is the importation of flaxseed. In the year 1913 2,670,091 bushels of Canadian flaxseed were shipped from Montreal to Hull out of a total export to all United Kingdom ports of 6,149,327 bushels. In the year following, when the crop was a light one in Canada, 176,694 bushels of flaxseed were sent to the United Kingdom but even of this amount Hull received 82,074 bushels, or nearly 46 per cent.

So far during the current year the imports of Canadian flaxseed have been distinctly light, only 521 quarters having been imported into the United Kingdom from Canada.

MAKING UP FOR LOST BUSINESS

(Continued from page 32.)

suppose other people just bought them to have one.''

Two Men on the Road

With building practically suspended, this firm has also found an unusual demand for electrical supplies. Two men were put on the road to get this business. It was found that many of those who had vacant property, in order to sell or rent it, were willing to spend money fitting it up with electric light. As soon as a house had been rented or sold, Fauteux's men got after the tenants for their lamp business, supplying tungsten lamps, etc., on which there was a good profit.

It has been the experience of this firm, that to sell electrical specialties over the counter gives them a reputation as an electrical house—a reputation they have not hitherto enjoyed—which draws inquiries for all kinds of electrical supplies.

There were other ventures, among which were sporting goods. Certain lines did not go very well; others were very successful, for example, guns and ammunition, and fishing tackle. The names of well known sportsmen in town were secured, to whom a letter was addressed, inviting them to look over the stock, and to bring their friends with them. It was also arranged that the manufacturers should send each of these literature of an educational character.

Fishing tackle is a line that has been handled before, but never with phenomenal success. It was unusually successful this year because the builders' department was slack, that is to say, business had to come from somewhere, and as people fish even though there is no building going on, the clerks in the store talked fishing unusually hard. It was simply a case of diverting business from the big city next door by letting Verdunites know they could buy fishing tackle in their home town.

Bought Paint Wisely

Just one personal touch in closing this article. Mr. Fauteux is a reader of Hardware and Metal. He follows the markets closely. Some time ago he observed that an advance was about to take place in paints and white lead. He bought heavily, and when the advance took place, raised his prices along with other dealers. The result has been that, while the volume of paint business done in 1915 has been less, his profit from this department is bigger than it was last year.

CATALOGUES AND BOOKLETS

Chicago Spring Butt Co.

Chicago Spring Butt Company, Chicago, Ill., have issued an attractive 40-page catalogue featuring many lines of butt hinges, pivot hinges, lavatory door equipment, garage and fire station spring hinges, door springs, etc. The catalogue is attractively gotten up, and is very complete. Copies will be mailed by the manufacturer upon request.

Dart Unions

Dart Union Company, Toronto, have issued a 16-page booklet featuring the "Dart Union." A number of illustrattions are shown featuring the various styles of Dart unions. Copies may be secured by writing to the above-named company.

American Rolling Mill Publications

The American Rolling Mill Co., Middletown, Ohio, has issued a booklet entitled "Armco Iron Rust Resisting Products," in which are described most of the Armo products as made at the Middletown factory, and quite a number made by other manufacturers. The company has also issued a new edition of "Deafening Rust," which covers the inception, development, qualities and uses of Armco Iron, it having been quite extensively revised as compared with the edition published a year ago. Copies of the booklets may be had on request.

Trade Notes

The Marble Arms & Mfg. Company, of Gladstone, Mich., U.S.A., are distributing some very fine pennants to dealers who handle their line of specialties for sportsmen. The pennants are regulation sizes, brown or red felt, with lettering in white. On them are shown some of the best advertised Marble specialties in natural colors. The Marble Company is not making any charge for these attractive and useful store decorations, even going so far as to prepay postage or expressage.

The same company has also produced a series of very attractive and sales-producing slides, which are being distributed without charge, to dealers who ask for them.

The slides are carefully gotten up in colors and feature some of the best selling of Marble's 60 Specialties for sportsmen. A set can be obtained free upon request to the Marble Company.

THE NATION'S BUSINESS.

From The Financial Post

Another vital suggestion, made in these columns, on behalf of Canadian business—but particularly on behalf of Canadian manufacturers—for which The Financial Post has long fought, has, this week, been carried into effect—that is, the appointment of a man to represent Canadian manufacturers in London.

On January 9 last The Financial Post said:

"Manufacturers have felt for months that they were not receiving the British orders for war supplies which they were capable of filling. According to press despatches, about $300,000,000 of business has gone to the United States, against not more than $15,000,000 here. Of the latter amount, some was secured direct without Government assistance.

"It is not the duty of the Government to solicit and hand over orders from private buyers to our manufacturers, as some of the latter seem to think. It is the duty of our Government to see that the Home Government gives Canadian manufacturers a chance to quote on every order they can satisfactorily fill. The member of the Dominion Cabinet, whoever he may be, who is responsible, has been very negligent in the past when he allowed such big business to go by us."

Again on January 23 we said . .

"Here is a case in point. An inquiry came from an official in Great Britain to a prominent Canadian, asking if he would be good enough to get the addresses of a dozen reliable United States manufacturers of blankets for the soldiers. The Canadian replied he could, but asked: "Why not buy them in Canada? There are many manufacturers here, as making blankets is something in which Canadians excel." The British official replied, with many thanks and with profuse regrets, that these facts were not known in England, and soon after a big order came here. The duty of the Department of Trade in this emergency is to forget statistics and to have a first-class salesman—endorsed and aided to the limit of his capacity, by our High Commissioner, camping on the doorstep of the Purchasing-Departments of the Admiralty and War Offices in London—to see that Canadian manufacturers have an opportunity to bid on everything the allies want which we could supply. Having got orders, the Minister and manufacturers should see, for the sake of Canadian reputation, that the goods supplied were equal to or better than the order called for, and that they were delivered ahead of time specified."

It is eleven months since we drew the attention of Sir George Foster, our Minister of Trade to the necessity of doing something practical for Canadian manufacturing and other investments, and the workers engaged in them. His department has done nothing worth mentioning. He does not appear to have even consulted the big business men as to what should be done. A private corporation has come to the rescue of Canadian business. The announcement is made that Sir Thomas Shaughnessy, President of the Canadian Pacific Railway has engaged a man to carry out the very duties that we suggested, in January last, should be performed by a government official. If properly carried out, as no doubt it will be, it is the most important service this or any other individual or corporation has ever rendered Canadian industry. Ballin and the Hamburg-American S.S. Line have been doing much of this work in Germany, but the German Government could always be depended upon to act effectively in the interests of German industry.

The man selected for the position is H. T. Meldrum for the past five years the Assistant General Secretary of the Canadian Manufacturers Association and a graduate of McGill University.

It should mean millions upon millions of dollars for Canada that we would not have got but for Shaughnessy's action. It is hard to estimate what Canadian industry has lost by the refusal of the Minister of Trade to act on the suggestion months ago. It affords the strongest possible evidence of the necessity for filling cabinet positions with men of executive ability and the right experience. Had we had such a man in our Department of Trade, it would not have been necessary for a private individual to come to the rescue of Canadian industry. We still think the position is one that should be filled by a Government official selected in consultation with the Manufacturers Association.

PLAYING UP AUTO ACCESSORIES

(Continued from page 31.)

lines which the car owners use. There are, of course, some communities where it would not pay the hardwareman to put in a large stock of accessories, but in such cases the hardwareman need only stock a few of the ready sellers, and order specials from catalogues which are supplied by manufacturers and wholesalers of accessories.

In adding auto accessories to his stock the merchant has to be guided in his buying by the number of cars in the community and by the requirements of the car owners.

BUILDING UP AN ACCESSORY DEPARTMENT

(Continued from page 33.)

tion has been the means of attracting a great many autoists to the store. This firm is typical of many others who started to sell auto accessories in a small way and have gradually built up the department and placed it on a profit-making basis.

Although there is now a big demand for supplies for auto owners it can easily be seen that the accessory business will continue to grow for many years to come. And the merchant who gets in on the ground floor and works up a connection with the auto owners in the community is the one who is likely to profit most.

Crushed Credit Dragon

Hunter Bros. Emerged Successfully From Conditions That Seemed Fatal to Cash System—Lost Trade For First Month Only, Then It Increased — Better Values and Less Worry.

THE story of the successful fight waged by Hunter Bros., of Huntingdon, Quebec, against a long established credit business in an old community is one that warms the heart of the man who puts his faith in Cash. There are still a number of merchants who face a similar problem but fear to cast off from their credit moorings. They are doing a "nice" business as it is; profits work out fairly satisfactorily at the end of the year, and the percentage of losses through bad accounts is never large enough to alarm them. But for all that the absence of ready cash often means taking long credits from the jobbers; prices as a result must be higher or their margin or profit shaved too close, and the worry of a heavy credit business is always with them.

The simplest plan, perhaps, is one that many have adopted, in permitting a credit account with old customers to continue, while it is refused to all new ones, and thus the list gradually is cut down. Some dissatisfaction is certain to result over the "favoritism" shown, but at the worst it is a movement towards a vastly better state of affairs.

Hunter Bros., Huntingdon, Que., is one of the oldest established firms in the town, and in a large section of Southern Quebec. Besides conducting a general store, they own and operate a planing mill, as well as a flour mill. The town of Huntingdon is situated in the midst of a very fine agricultural district where the farming community is a well-to-do class.

The general store business of Hunter Bros. was one that had been built up by hard work and perseverance in the early days when long credit was considered a necessity. This custom was continued like many another, largely because it was custom.

Now for the revolution that has been worked. John Hunter, the founder of the firm, was one of the pioneer business men of the district. He left three sons who succeeded to the business. For some time F. H. Hunter, who managed the general store, has felt that the old long credit system belonged to a past age and that the time had arrived when a more up-to-date method must be introduced. For some time he endeavored in vain, to persuade his partners.

$10,000 on the Books

Finally on taking stock in January, 1914, it was found that the firm had done a prosperous year's business with good profits, but the books showed outstanding accounts of $10,000. Although the most of this was considered good, the manager thought that the amount was too large. He argued this way: "If we needed this money we could not get $1,000 of it immediately, however valuable an asset it might be."

But the problem was how to reduce the amount of these book debts. Indeed the fact that most of their customers were considered "good" simply added to the difficulty, as it was impossible to discriminate and make fish of one and flesh of another.

"I thought it all over for some time," said Mr. Hunter, "and at length decided that there was only one of two things to do, either to continue the old system or adopt a strictly cash one. The latter I decided to choose."

"Dangerous or Ruinous"

The proposition still seemed dangerous, if not ruinous to the other members of the firm in a community so set in their ways. But his arguments won out at last and he was given a free hand. He acted on his theory that the change must be a thorough one, without half way measures—all or none.

Issued Circular: Named Date

In pursuance of his plan he issued a business-like circular, mailing a copy to each customer. He informed them in courteous terms of the decision of the firm to adopt a straight cash method of trading and a definite date was set for the commencement of the new era.

Mr. Hunter, however, did not stop there. He felt that like Charity, this change must begin at home, and accordingly told the members of his own home that they would pay cash in future for goods procured in the store. His partners followed suit.

They then went further and informed the employees of their mills that no credit would be extended to them: they must pay cash. The former custom had been to give them credit and collect it from wages due, but by the new arrangement they were paid cash and were told they would have to pay the same.

The five clerks in the store were also informed that they must in future pay cash for goods bought, the same as other customers.

When the morning of the date set for the adoption of the new system came, the doors of the store were opened as usual, with a feeling of some anxiety, but a determination that in no jot or tittle would there be a departure from the policy that had been proclaimed. The first purchaser to enter the store on this eventful morning was an old customer. He bought about ten dollars' worth of goods and then coolly told the clerk to charge the amount. He was aware of the new system but had "heard of such things before," and was little affected by them.

The First Customer Dropped—For a Day Only

When firmly informed, however, that there would be no more credit in that store he was at first incredulous as the information was politely conveyed to him. When he realized that it was really no joke, as he had regarded it before, he went up in the air, and vehemently declared he would never buy a dollar's worth in that place again. His indignation at what he considered such "unfair" treatment was expressed in very vigorous terms, as he declared he was done with the store forever.

It was suggested to him, however, that as he was not going to deal any more with the firm, it would be only fair to settle what he was owing. This he did by a three months' note.

In a day or two he came back and informed Mr. Hunter that he had talked it over with his wife, and they had decided to stay with the store and conform to the new rules. This he did, and remains today, as he was before, one of its customers.

This was but a sample of many of their experiences in the next three or four weeks. For one month trade fell off considerably, but after that it began to drift back. Customers found that often they could get better value for their money than in credit stores.

The first soon discovered that although their credit had always been excellent, yet they could do better buying with ready cash than with credit, as they were compelled to do with so much on their books. Many of the "snaps" that had formerly gone to the large city stores were now coming their way.

They discovered also that some customers came to them with their cash for goods where they could buy to advant-

What Other Papers Say

Items of Interest From Other Papers—In Each Instance Credit is Given to the Paper From Which the Item is Taken—Present conditions and the U.S. —Active When Loan is Completed—Mail Order Business Grows.

PRESENT CONDITIONS AND THE U.S.

From the Wall Street Journal.

PRESENT conditions are bringing to the United States a great deal of business, which ordinarily would go to European manufacturers. Not all of it will remain here. After the war the greater part of it will be lost. One of the greatest financiers in America says that unless the banking interests show a broad minded spirit now, all of it will be lost, and more besides. Great Britain, France and Russia would be unwilling to deal with America when they could get along without it, if this country refused to accommodate them when they stood in need of accommodation.

* * *

ACTIVE WHEN LOAN IS COMPLETED.

From American Metal Market.

IT is quite natural that pending the completion of the foreign war loan which must be negotiated if our prosperity, due to war orders for food stuffs and ammunition and other supplies, is to be continued that there should be a halt in business. Such a halt certainly exists in the metal trade and has lately become pronounced in every metal except copper, which has been thrown into a nervous state with higher prices by reason of the strike at the Arizona smelters. While there is no interest being shown by buyers, with the single exception of copper, it is quite noticeable that sellers are not affected by the stagnation. They believe that this important loan which would restore the power of the European buyer to order and pay for our commodities, must be sooner or later carried through, and when it is it will result in a heavy buying movement from Europe which will be very stimulating to business. We believe this expectation is justified. At all events sellers are prepared to await developments with confidence.

There is a very optimistic feeling in England to-day as a result of the official statements made in the House of Commons yesterday, of which perhaps the most impressive was the statement that 3,000,000 men in the British Empire have already joined the army of their own free will and that 800,000 people are now at work in Great Britain engaged in the manufacture of ammunition. Business interests of our country consider that conditions here will be benefited by the improvements in the prospects of the Allies and this better feeling abroad is in part reflected here to-day.

It is quite noticeable what little effect the acute situation between Germany and the United States has had on our finances and business, neither does it seem to worry Wall St. Were the situation as acute between the United States and England, it is no exaggeration to say we would be in the midst of a panic to-day.

We are inclined to think the present halt in buying may continue until arrangements to float the loan are completed but that when it is completed, we will enter into a period of great activity, in which metals will get their full share.

* * *

MAIL ORDER BUSINESS GROWS

From American Artisan.

THE statement of business done by Sears, Roebuck and Company during the first eight months of 1915, which has just been published, shows the increase in sales to be nearly seven million dollars, a little over eleven and a half per cent. Every month shows a gain, the smallest being 2.10 per cent. for January and the largest 26.10 per cent. for June, while the greatest amount of business done in any one month was $10,198,741 in March.

The figures in that statement are of more than ordinary interest to the retail hardware dealer in rural communities, for they furnish very substantial proof of the fact that the concern that wants business and goes after it all the time gets a large proportion of what there is to get, while the man who sits in his store and waits for trade to come to him, gets a very much smaller proportion.

With the mail order houses there is no "dull season," so far as working up business is concerned. Their advertising departments are working full blast every day of the year, and the natural result of their activity is that every month, as shown in the statement referred to in the foregoing, presents a substantial gain in a year when the average retail hardware dealer, as well as other retailers, has found his sales at a standstill.

Isn't it about time that the retail hardware dealers all over the country recognize and act upon the fact that advertising is the most potent force in the success and growth of the mail order houses?

Isn't it about time for you, Mr. Retail Hardware Dealer, who do not believe in the efficiency of advertising, to wake up and admit to yourself that you must do more than you are doing now to secure the hardware trade of your community?

Don't let the mistaken notion that you cannot advertise effectively, keep you from starting a vigorous campaign for this fall's business. While you may not be able to write as fluently as the expert advertising men of the mail order houses, you can tell in plain language what your price is, why it is worthy of the consumer's attention and what his price is.

That is all there is to advertising so far as fundamentals are concerned and that is all the retailer needs to do when he begins.

And if he really wishes to render his customers an efficient service he will include advertising as one of the important features of his service—and will reap the additional reward that comes to the merchant who improves

WAR AND MINING INDUSTRY.

From Canadian Mining Journal.

THE demand for munitions of war is making itself felt in many ways in the mining industry. Most metals are greatly in demand and the prices good. Big premiums over these prices are also obtainable for especially pure materials. It is not surprising therefore that many new metallurgical works are being established. As a result of the peculiar conditions, Canada is soon to have in operation three zinc refineries, using electrolytic methods. The treatment of zinc ores by leaching and electrolytic precipitation from sulphate solutions gives a product now much in demand. The process could not have been adopted before the war with any such promise of success. If reasonably good results are obtained the electrolytic process may prove the salvation of many Canadian zinc properties.

Events in the Trade

Readers are requested to send in, for publication on this page, news items of interest to the trade.

Fire Losses

Bedford, Que.—The Bedford Mfg. Co, has suffered loss by fire.

Moving to Chatham

Wallaceburg, Ont.—The Ideal Electric Mfg. Co., is moving to Chatham.

Obituary

Hamilton, Ont.—The death occurred here of Thos. W. Butler, of the Hamilton Tar Distilling Co.

Business Changes

Winnipeg, Man.—M. Pechet, hardware, has removed to Lipton, Sask.

Dominion Incorporations

Automatic Valve Co. of Canada, capitalized at $20,000, head office, Calgary, Alta., to manufacture an automatic valve and other apparatus.

Annual Dinner

The annual dinner of the Canadian Wholesale Hardware Association will be held at the King Edward Hotel, Toronto, on the evening of Tuesday, Sept. 28.

Bucking Up Contest

At a cross-cut sawing contest held during the Shriners' Convention at Seattle, the winner with a Simond's Crescent Ground cross-cut saw won first prize of $75. Forty-one-inch fir logs were selected on which the contestants might try their skill, and the time taken by the winner was 8 minutes 10 3-5 seconds.

Annual Convention American Hardwaremen

The American Hardware Manufacturers' Association will meet the National Hardware convention in their big annual convention at Atlantic City, Oct. 13, 14, 15. The headquarters of both associations will be again the Marlborough—Blenheim. This year 1915 is a special year. This 1915 convention is to be a special convention, important to the welfare of the two organizations.

To Enlarge Canadian Plant

Brantford, Ont.—The Brantford Cordage Co., Ltd., is to double the size of its plant. It is said that the enlarged factory will be capable of producing 8,000 tons of twine per year, while accommodation will also be made for separate quarters for the manufacture of rope and cordage. The addition to the plant will be of brick construction, similar to the present plant. C. L. Messecar is manager of the Brantford Cordage Company.

New Firms.

Leduc, Alta.—A hardware store has been opened here, and will be known as the "Leduc Hardware." W. G. Wood, who was connected with the B. F. Morris Hardware Co. of this place for some time, is the proprietor.

Obituary

Windsor, Ont.—Sherman R. Miller, well known manufacturer of Windsor, is dead after a brief illness. The late Mr. Miller was 63 years old, and up to the time of his death was very active in his duties in connection with the Royal Manufacturing Co. and the Imperial Silverware Co. of Windsor.

Winnipeg Notes

J. C. Craig, credit manager of the Miller-Morse Hardware Co., Winnipeg, left last Thursday for a week's trip to points in Saskatchewan.

L. C. Marr, sales manager of the Miller-Morse Hardware Co., Winnipeg, left last Thursday to make a three weeks' trip through Saskatchewan and Alberta.

To Represent Heller-Aller Co.

Commencing October 1, Clay Farnham will represent the Heller-Aller Company, Windsor, Ont., in Eastern Ontario. E. S. Townsend will represent the same company in Western Ontario. The company makes in addition to other lines, windmills, tanks, pumps, feed heaters, hog fountains, hog houses, tank heaters, house tanks, etc.

A Correction

On page 85 of the September 11 issue of Hardware and Metal, an item appeared stating that the Jones Shovel Company of Gananoque, Que., had received an order for shovels through the purchasing department of the Canadian Pacific Railway, acting for the British War Office. The item should have stated that the order had been placed with the D. F. Jones Manufacturing Company, Gananoque, Ont.

Join the Colors.

Regina, Sask.—Last week three members of the staff of the Imperial Oil Co. were made the recipients of wrist watches prior to their severing their connections with the firm to join the colors. Messrs. Neal, Raike and Nichol are the three who have responded to the call.

Galt, Ont.—Two employees of the R. McDougall Co., manufacturers of tools, pumps, etc., were made the recipients of substantial gifts by members of the staff on the occasion of their leaving to join the colors.

Thos. Stewart and Edward T. Green, the two employees who are going to the front, made fitting replies to the donors of the gifts.

Personal

Wm. Baxter, accountant and office manager, Toronto branch, McClary Mfg. Co., this month completed 30 years' connection with the firm.

Mr. Peleg Howland, president H. S. Howland, Sons & Co., Toronto, and president Imperial Bank of Canada, is at present on a business tour of the Canadian West.

Messrs. G. P. Walker and D. J. Bonnell of R. T. Holman, Limited, Summerside, P.E.I., recently spent some days in Toronto on a buying trip in the interests of their firm.

W. S. Fisher, of the Enterprise Foundry Co., Sackville, N.B., is now in England visiting his son, Donald S. Fisher, who has practically recovered from the injuries he received in France, and is now enjoying a rest in England.

W. H. Newton, sales manager of the Canada Paint Company, Montreal, has recently returned from a short vacation at Lake St. Joseph, the beautiful resort a few miles north of Valcartier, Que. Mr. Newton characteristically expresses himself as being refreshed and invigorated for a busy fall campaign.

The many friends of Geo. Brown, who has been the representative of Caverhill, Learmont & Co., Montreal, in Quebec and the Eastern townships for over thirty-five years, will be sorry to learn that he is laid up with a serious illness. The latest reports are that the doctors are hopeful that he will make a speedy recovery.

MAJOR GEORGE STACEY COMMANDING OFFICER

Many hardwaremen in all parts of Canada will be interested to know that Major George Stacey, of the Stacey Cutlery Company, Ltd., St. Thomas, Ont., has been appointed commanding officer of the Elgin Company now being recruited at St. Thomas. George Stacey was born in St. Thomas in 1867. After leaving school he entered the employ of T. Stacey & Son, hardware merchants. Leaving the hardware business some time later, Mr. Stacey represented a farm journal in a tour through the Lower Provinces. When Geo. Stacey started on his tour of the Lower Provinces he bought a horse and buggy at Halifax, N.S., (and it is stated on good authority that he wasn't stung on the price of the horse). Mr. Stacey, with an assistant, worked the lower provinces, and drove back to St. Thomas, having driven the same horse throughout the entire journey. The following year Mr. Stacey went to sea. His first voyage was out of New York to Valparaiso. After this voyage he went to London, England, and for three years sailed in the Peninsular & Oriental Company, and sailed east to China, Japan, Australia and New Zealand. Returning to London from Hong Kong after an attack of fever, Mr. Stacey sailed to Antwerp, Rotterdam, Bordeaux and other ports. Mr. Stacey then returned to St. Thomas, and later he represented the Hobbs Hardware Co., of London, Ont. Mr. Stacey next became associated with the Stacey Cutlery Co., Ltd., of St. Thomas. In 1897 Major Stacey joined the 25th Regiment as lieutenant, was promoted to a captaincy, and on the disbandment of the Regiment in 1903, went on the reserve of officers.

Many hardwaremen in Canada are acquainted with the kindly pleasing personality of Major George Stacey, and wish him success in his new undertaking.

CRUSHED CREDIT DRAGON

(Continued from page 38.)

age and went to the other stores for credit.

After a few months' trial of the cash system, it was found on a review of the situation that they had not lost a single good customer. A few had gone, but they were ones whose trade they did not value very highly.

Profits More Easily Made

Stocktaking at the end of the year, which in a cash system is the supreme test, showed that the volume of business had increased $5,000, and the firm's profits were fully proportionate.

Mr. Hunter added that these profits were much more easily made, for while in the old system he frequently had to stay till all hours at night writing up books and making out accounts, now when the store closes everyone leaves and does not return till morning, refreshed and ready for another day's business.

Under no consideration, he declares, would he return to the old credit method.

AXES FOR FRONT

Big Orders Placed in Three Provinces by British War Office

During the week some very substantial orders for axes have been placed in Canada by the British War Office through the purchasing agent at Windsor Station, Montreal. The axes are of both the large "felling" variety and the smaller "hand" axes or hatchets. Orders were largely placed with manufacturers who will make them to pattern, and the products will come from plants in New Brunswick, Ontario and Quebec.

MAJOR GEORGE STACEY

of the Stacey Cutlery Co., St. Thomas, Ont. Major Stacey has been appointed commanding officer of the Elgin Regiment recruited at St. Thomas, Ont.

GLASS FACTORIES PROSPER IN JAPAN

The Japanese glass factories are among the beneficiaries of the war, and the trade is said to have suffered but little from the anti-Japanese boycott in China. Since the devastation of Belgium a number of glass importing firms have come to look to Japan for the supply of glass, according to the Mainichi of Osaka. As a result it is said there are large orders from China, India, the South Seas, Australia and Africa. These orders remain unfilled, owing to the scarcity of ship space available, and partly to the shortage of goods.

J. K. H. Pope, secretary McClary Mfg. Co., London, is at present on a tour of Western Canada.

Trade Inquiries

The Department of Trade and Commerce has received the following inquiries relating to Canadian trade. Addresses may be secured from the Department, or from the Editor, Hardware and Metal, Toronto, Canada. Please quote reference number when requesting addresses.

1035. **Agricultural implements, tools, hardware, etc.**—An English firm inquires for manufacturers of the following articles: Agricultural implements, hand-tools, hardware (bolts and nuts, screws, nails, fencing, belting, grindstones, rope and twine), wood goods (all kinds of domestic articles, dowels, wood-handles, skewers, etc.), wrought-iron tubes and mild steel in bars and sheets.

1036. **Triplex board.**—A gentleman in Victoria, B.C., is seeking a source of supply of cheap triplex board, both colors and white. He states that he needs 1,000 tons a year (2,240 pounds per ton). Samples may be inspected at the Department of Trade and Commerce, Ottawa.

1037. **Magnesite and zinc spelter.**—A London correspondent asks to be placed in touch with Canadian firms who can supply magnesite and zinc spelter.

1039. **Export trade.**—A London firm claiming experience in shipping and export trade, is desirous of getting into touch with Canadian manufacturers and shippers seeking an export connection.

1041. **Ironmongers' supplies.**—A firm in the Midland counties of England is prepared to consider quotations c.i.f. Liverpool on the following commodities: Mechanics hand-tools, wooden handles, washboards, twine, screws, barbed-wire fencing, belting, wood pulleys. They also desire to purchase large quantities of wire nails. Quotations should be c.i.f. Liverpool, and a few samples should be submitted.

1042. **Ironmongers' supplies.** — An English firm is open to purchase rope and twines, bolts and nuts, wire nails and galvanized fencing wire. Prices must be c.i.f. Liverpool. They also inquire for exporters of 16-gauge annealed iron wire in rings.

1044. **Screws, wire nails, garden implements.**—A Birmingham firm is prepared to consider quotations on screws and wire nails. Prices c.i.f. Liverpool. They are also open to represent a manufacturer of garden implements.

1045. **Twine and wire fencing.**—A Banbury firm is open to purchase binder twine, barbed wire and wire fencing. Quotations c.i.f. Bristol or Liverpool. Agricultural machinery—all kinds—is also desired.

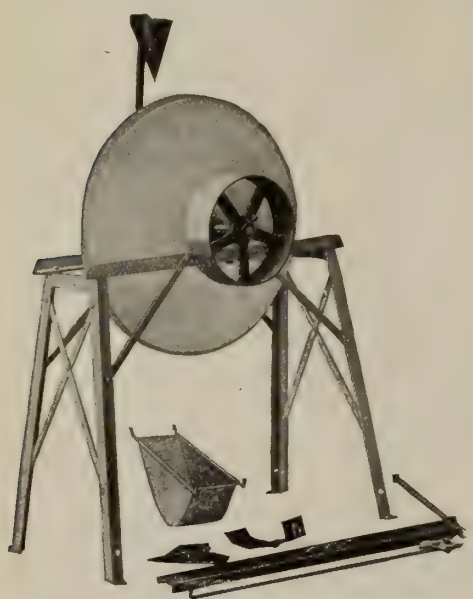
1046. **Wooden goods.**—A Birmingham commission agent is open to represent manufacturers of all kinds of small wooden goods, particularly handles.

New Hardware Goods

Offered Canadian Hardwaremen

015 RURAL GRINDSTONE

Richards-Wilcox Canadian Company, Ltd., London, Ont., offers to the trade a new product called the 015 rural grindstone for use with a gasoline or other engine. The grindstone is said to



The 015 Rural Power Grindstone.

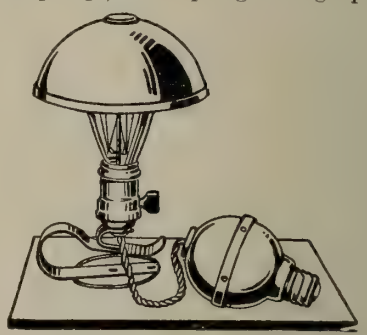
be ideal for the farmer for grinding tools, etc. The frame of the grindstone is made of heavy steel angles, securely braced, making a firm and rigid frame. There are no cast iron parts, and the frame may be screwed to the floor if desired. The stone is said to be of genuine hard grit of the finest quality, 20-22 in. diameter, 2-inch face. The makers claim that this stone is superior to the harder grinders, which they claim overheat and draw the temper of the tool. The equipment is a 12-inch pulley, 2⅜ face, furnished also with a hand crank. The measurements are: Frame, 27½ inches high, 30 inches long, 19 inches wide on floor. The finish is red with black trimmings; weight, 115 pounds; shipped knocked down, one in a crate. The grindstone is also equipped with galvanized drip tray, adjustable tool rest and drip cup, all steel foot pedal, with rod and crank.

RIVETLESS FACE TROWEL

Crescent Mfg. Co., New York, N.Y., offers to the trade the "Rivetless Face" plastering trowel, here illustrated. The trowel has no rivets on the face of the blade. The trowels are said to be made of high-grade crucible steel, with correct hang and weight. The trowels are said to be highly finished. The handle is leather wound. The trowel is made in two lengths, 10½ inches and 11 inches. Complete details may be secured from the manufacturer.

THE ADJUST-A-LITE

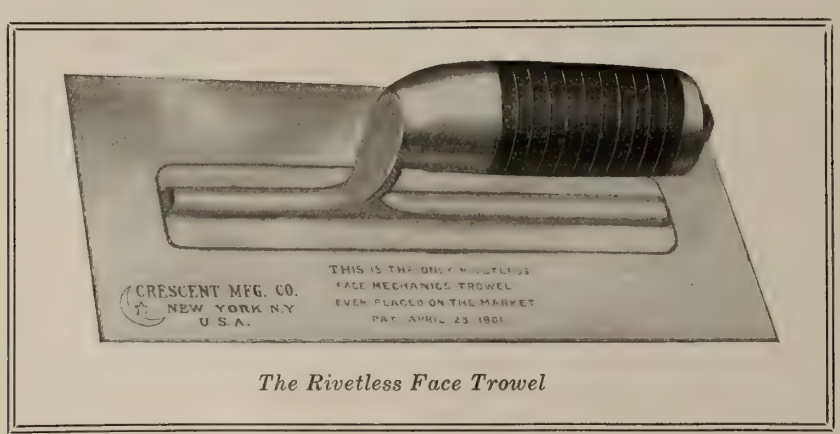
International Automatic Utilities Co., 407 S. Dearborn Street, Chicago, Ill., offers to the trade a new article called the Adjust-a-Lite. The ball of the Adjust-a-Lite is 3 inches in diameter; will, it is claimed, fit any socket, and will carry 250 volts. The makers state that one of the most striking features of the Adjust-a-Lite is that the cord which comes from the reel is always about at the same tension, as it contains four clock springs, each spring taking up 2½



The Adjust-A-Lite

feet of the cord, and there is nothing in the article that can get out of order, as it is all riveted and soldered, and guaranteed to be mechanically perfect. The stand is made of spring brass, and can be adjusted in any position desired, such as on the back of a bed, chair, piano, etc. The light can be raised or lowered to any height desired. Ten feet of cord accompany each Adjust-a-Lite. The directors state that to lower the light, draw on cord and same unwinds from reel. To raise, draw down slightly on cord and release; the cord winds up automatically. The Adjust-a-Lite weighs 20 oz., including stand and shade. It takes up but very little space, and can be carried along in suit case or travelling bag. Descriptive matter will be mailed by the manufacturers on request.

Aloxite Economy strips. A description of the above appeared on page 59 of last week's issue of Hardware and Metal.



The Rivetless Face Trowel

Weekly Market Reports

Statements From Buying Centres

The Markets at a Glance

There have been many price changes in hardware lines during the past week. Wire and wire products, along with many other lines, have been affected. There has been an increase of 15 cents on bright wire, 15 cents on hay wire in coils, 15c on wire bale ties, and 15 cents on cut baling wire. Bright and galvanized fence staples in kegs have been advanced 10 cents. Orders for harvest tools for spring delivery are being accepted on the old basis, while painted screen cloth for spring delivery is reduced 5 cents per 100 square feet. Among other lines affected are shot, bar iron, stall fixtures, cow ties, rifles, solder. The metal markets are still quiet, and outside of the demand for metals used in making munitions of war there is very little business passing. The cool weather of the past week has created a brisk demand for a large number of fall lines. A feature of the week has been the marked improvement in the stove trade, as a result of the cooler weather. Stove manufacturers state that conditions compare very favorably with a year ago, and although not as good as in 1913, there is reason for general satisfaction. In the paint trade there is very little change this week. Compared with the corresponding period of last year business is satisfactory. Buyers are still buying lightly and this condition will probably prevail as long as paint remains at the present high level. There is still a considerable variation in the prices quoted by different firms on linseed oil and the future of the market is very uncertain. The demand at present is very poor. Greater interest is being exhibited in lines required for the coming winter trade. Reports from Winnipeg state that sorting orders are coming in freely by every mail and business is showing steady improvement.

MONTREAL

MONTREAL, Sept. 23. — Cooler weather has brought a brisker demand for late fall and winter lines in the hardware trade. Business is considered as being altogether satisfactory in comparison with a year ago. Generally speaking there is a good feeling on the part of dealers, although, of course, it is recognized that so long as the war lasts buying will be more or less on the hand-to-mouth basis, and most manufacturing trades, like the building trades, will be very quiet. The sustaining factor is the steady demand from the country districts for general staple lines. Stove men report a marked activity with the lower temperatures.

There have been a large number of important price changes during the week. The rolling mills have announced advances on wire and wire products, including an increase of 15c on bright wire, 15c on hay wire in coils, 15c on wire bale ties and 15 per cent. on cut baling wire; bright and galvanized fence staples in kegs have been advanced 10c. Harvest tools for spring delivery are confirmed on the old basis and painted screen cloth for spring delivery is reduced 5c per 100 square feet. Shot has been brought to a 9c basis and brass jack chain is now 20 per cent. off. The advance of 5 per cent. on Winchester rifles and 10 per cent. on Stevens rifles has been confirmed. Cow-ties have been reduced 10 per cent., and general stall fixtures 5 per cent.

In the metals there is little change although some adjustments are still being made. Evidence is that trades recognize that the market has been manipulated, and are acting warily. Tin has dropped 1c, and lead is down another ¼c; solder is reduced 1c all round and bar iron is being advanced 5c cwt. Galvanized Canada plates have been increased 25c all round.

Tin.—A further reduction of 1c is noted in the local quotation for tin, the basis now being 41c to 42c. The market is generally quiet and in the States there has been a fractional decline. New York reports a flat situation caused by an over-supply of large arrivals, with the result that some second hands are inclined to undersell the market. The future situation is particularly weak. Deliveries for October will be substantialial, but from that time on the curtailment cf foreign markets by British regulations and the reduction of the canners requirements will have the effect of materially reducing the consumption. The "American Metal Market" expresses the opinion that the apex of tin consumption on this side of the Atlantic has been reached and that there is going to be a falling off in requirements from November forward. The only outlook for strengthening influences is abroad, and there the situation is vague.

Spelter.—The local market for spelter has not changed, but the tendency continues easy. New York has seen a further fractional decline since last report and this has brought a good inquiry from galvanized iron manufacturers but it is all for prompt and early deliveries. The supply of metal for delivery within thirty days seems to be pretty well sold, says New York, but the efforts are largely on the part of sellers to find a market, rather than buyers, and there is small inquiry from futures.

Lead.—A further reduction of ¼c on lead, to 6¼ to 6½c, indicates that the Canadian market is still following the American downward trend. New York reports that the Trust remains steady at

MONTREAL QUOTATIONS.

Tin	41c-42c
Spelter	19c-20c
Copper	21c
Lead	6¼c-6½c
Antimony	35c
Solder, ½ x ½	25c-27c
Solder "strictly"	27c-29c
Aluminum, Ingot	50c lb.
Wire Nails	$2.50 base
Cut Nails	$2.50 base
Pure Manila Rope	16c base
British Manila Rope	13½c base
African Hemp	13½c
Sisal	11¼c
Lath Yarn	10¾c

For quotations on other hardware goods see weekly report and current quotations.

4½c, but that outside holders are trying to find buyers at 2½c to 5c a hundred under this figure. New York continues very dull, but London keeps improving.

Copper.—The local market is unchanged on recent quotations of 21c. Indications are that the situation will remain easy for some time. New York has heard rumors of inquiry for export business, but dealers are inclined to be suspicious, probably as the result of past manipulation. English stocks have been decreasing, but this is probably because supplies have been moved to the States for refinement and this is likely to work against the American position. The statistical showing of the metal would indicate that present production is equal to, if not more than, the consuming demand and for this reason efforts to boom prices are being regarded with suspicion by those closely in touch. There would appear to be grounds for accepting the story that German interests have been buying stocks and placing them on board German liners in New York for shipment at some hoped-for opportunity while the conflicts lasts, or after the close of the war.

Antimony.—Antimony is nominally 35c per pound for Japanese and Chinese, but Cookson's or Hallett's would bring at least 5c higher. However, so far as the latter brands are concerned, there is practically nothing available. New York reports that for Japanese and Chinese the market is dull and that sellers are eager for business, especially in futures; prices there have declined fractionally.

Aluminum.—Local market remains at the nominal figure of 50c, and there is very little business being done. In New York where 50c was being offered at last report there have recently been a few lots crop up and they have been offered and sold around 47c.

Solder.—Following the trend of the market for materials, a reduction in the quotations for solder of 1c all round has been made. Half and half is now being sold at 25c to 27c, and strictly at 27c to 29c.

Galvanized Iron.—The basis of quotations for galvanized sheets and plates submitted last week are now in general effect, and since then there has been an advance on galvanized Canada plates of 25c all round. Following is the schedule:

Canada Plates.—

Ordinary, 52 sheets	$3.45
All bright, 52 sheets	4.40

	Galvanized		
	Apollo	Crown	Gorbals
18 x 24 x 52	6.25	6.25	6.25
60	6.50	6.50	6.50
20 x 28 x 47	6.50	6.50	6.50
20 x 28 x 94	13.00	13.00	13.00

Sheets.—

22 gauge, per square	9.00
24 gauge, per square	7.50
26 gauge, per square	5.25
28 gauge, per square	5.00

Discount to dealers 10 per cent.

Other lines are shown in current market quotations.

Galvanized Products.—Although spelter has been gradually dropping to lower levels, manufacturers of general lines of galvanized goods state that they do not see that the situation is likely to clear sufficiently to permit of general operations before spring. There may be changes in the market up and down, but the shortness of supplies and difficulties in securing delivery are such that it is very questionable if general goods can be produced sufficiently cheap to make them a market factor against less expensive and fairly satisfactory substitutes.

Lead Pipe.—Despite the decline in the price of lead, the position of lead pipe and lead sheets is without further change although quotations are easier and the outlook is for reductions. Lead pipe is quoted 9½c and lead waste pipe 10½c; lead wool is priced 10c. Lead sheets, 2½ lb., $8.50 per square foot, have been generally withdrawn; other weights are quoted as follows:

Sheets, 3-lb. sq. ft.	$8.25
Sheets, 3½-lb. sq. ft.	8.00
Sheets, 4 to 6 lbs. sq. ft.	7.75

Cut sheets, ½c per lb. extra.

Cut sheets to size, ¾c per lb. extra.

Iron and Steel.—Iron and steel are generally firm, the demand for materials entering into the manufacture of munitions having a general effect. It is reported that the advance of an additional 5c on the price of bar iron, to $2.10, referred to last week, is likely to be put into general effect.

Stall Fixtures.—A change has been made on the price of stall fixtures, which covers several reductions in price. McKinnon cow ties are now quoted 50 per cent. off as against 40 per cent., and Greening's cow ties have been brought to the same basis; the stall fixed pattern remains at 40 per cent. off. Stall fixtures in general have been reduced 5 per cent. from 35 per cent. off to 40 per cent. off.

Peterboro Price List

Copies of price-list pertaining to catalogue No. 7 of the Peterborough Lock Manufacturing Co., are now in the hands of the trade. The list is subjected to a discount of 50-10 per cent. on steel and iron lines, and 50 per cent. on brass. The following goods are sold at net prices porcelain, jet and mineral, japanned mounted knobs, 120 per dozen set; rim locks No. 1516, $1.30 per dozen set.

Wire Cloth.—The prices for black wire cloth for spring delivery have been revised and reduced 5c per 100 square feet as follows: Painted screen in 100-foot rolls $1.50; in 50-foot rolls, $1.55.

Harvest Tools.—The discounts on harvest tools for spring delivery have been confirmed at the former quotations: 40 per cent. and 12½ per cent. off.

Smooth Steel Wire.—An advance of 15c in the price of bright wire, makes the base of No. 0-9 gauge smooth steel wire $2.60; No. 10, 6c extra; No. 11, 12c extra; No. 12 and No. 13, 30c extra; No. 14 gauge 40c extra; No. 15 gauge, 55c extra; No. 16 gauge, 70c extra. Other extra charges as per usual list in current quotations.

Hay Wire in Coils.—There is an advance of 15c on hay wire in coils for Ontario and Quebec. The new Montreal quotation will now be: No. 13, $2.65; No. 14, $2.70; No. 15, $2.80.

Wire Bale Ties.—An advance on wire bale ties goes into effect in connection with the general changes. Prices are now as follows:

Single loop—	Per cwt.
No. 12	$3.00
No. 13	3.30
No. 13½	3.35
No. 14	3.45
No. 15	3.65

Cut Hay Wire—The discount on annealed cut hay baling wire has been reduced from 25 per cent. to 10 per cent., making an advance of 15 per cent. Quotations are now on the following basis:

Annealed Cut Hay Baling Wire, No. 9, $3.75; No. 10, $3.80; No. 11, $3.90; No. 12 and 13, $4; No. 13½, $4.10; No. 14, $4.25; No. 15, $4.50; in lengths 6 feet to 11 feet, discounts 10 per cent.; other lengths 20c per 100 lbs. extra.

Staples—With the advance in wire come higher prices for bright and galvanized fence staples, the increase being 10c per keg and the new quotations as follows:

Fence staples, galvanized in kegs, $3.70

Fence staples, bright in kegs, $2.85.

Bed rods—Another line affected is bed rods and straightened heavy wire which have been advanced 10c on the old quotation.

Brass Jack Chain—The discount on brass jack chain has been brought to a basis of 20 per cent., this being the most recent of several advances and follows similar action recently on the part of the trade in Toronto.

Ammunition—The splendid demand continues for loaded gun shells and there are indications that a great many people are taking to hunting to fill in time. So far as the sporting rifle shells are concerned the difficulty in getting deliveries continues.

Shot—Dealers are finally bringing down the quotation on shot from 11½c to 9c. This course was taken some time ago by dealers in Toronto but locally

the wholesalers have been delaying action owing to several difficult features of the market.

Rifles—The changes in the prices on Winchester and Stevens rifles have now gone into effect generally in the local trade. The advance is 5 per cent. on Winchester and 10 per cent. on Stevens. The Winchester line is now 7½ per cent. off.

Screws and Nails—The shortage of nails used in the manufacture of ammunition boxes continues and the prices are very firm. Nails are in comparatively small demand and are steady on the recent advance.

Sheet Zinc—Despite the declines which have taken place in the price of spelter the market remains fairly steady at 25c. However, lower prices are to be looked for. The present difficulty appears to be in getting orders filled.

Seasonable Lines—With the cooler weather there is an interest being noted in skates and hockey sticks and business in these lines should be good for some time. Sleigh bells and carriage heaters will now be bought also. The call for cow ties and horse blankets is very good.

Stoves—A feature of the week has been a marked improvement in the business in stoves which has come with the cooler weather. Dealers state that conditions compare very favorably with a year ago and although not yet as good as in 1913 there is reason for general satisfaction.

TORONTO

TORONTO, Sept. 24.—Local hardware jobbers report that business generally is improving. The outlook is now considerably brighter than it has been for some time and a good fall season is expected. Orders being received by travellers on the road are increasing in volume, and, while there is no boom, it is very encouraging to see the increased volume of orders. Seasonable lines are moving well, and fall shipments of booked orders are going out regularly. Several price changes have gone into effect during the past week, including increase of 15c per 100 lbs. in the price of wire. Prices on regular fall lines are fairly steady. Price changes have also taken place in cow ties, fence staples, shotguns, wire cloth and other lines.

The metal markets are quiet, and outside of the demand for metals used in making munitions of war, there is very little business passing. With the exception of copper, there has been very little change in the demand. For copper there has been a slight improvement in demand locally.

A new development in the engineering field is the proposal to manufacture artillery in Canada. Although this class of work requires considerable skill and is highly technical, the committee appointed by the Dominion Government has reported favorably on the possibility of making guns. The order is said to amount to sixty-five million dollars and the four grades of guns to be covered are the twelve-pounder, eighteen-pounder, 4.5-gun and the howitzer. Further developments have to be recorded in the munitions business. The Canadian Car & Foundry Co. have received another order for Russian shells worth, it is stated, over 50 million dollars. It is reported as being probable that a part of this order will be sub-let to Canadian concerns, the National Steel Car and Montreal Ammunition Co. being mentioned as probable participants.

TORONTO QUOTATIONS.

Tin	39c-40c
Copper	19½c-20c
Spelter	16½c-17½c
Lead	6¼c
Antimony	36c
Aluminum Ingot	50c
Aluminum Pattern	48c lb.
Solder, ½ x ½	24c lb.
Wire Solder	27c lb.
Wiping Solder	23c lb.
Tinker's Bar Solder	29c lb.
Solder, Wiping—	
Acme	21c
Commercial	22½c
Easy	22c
Star Extra	25¼c
Strictly standard wiping	25¼c

Steel Market

The general situation in the steel trade is much the same as during the past few weeks, the brisk demand for forgings and rounds for shells continues, in addition to the big export business. There is such a big demand for steel for shells that Canadian mills cannot take care of all the business and inquiries have been sent to the States for 35,000 tons of steel rounds. The building trade is still very dull and there is little demand for structural shapes. Prices on bars, plates and shapes are unchanged but are holding very firm.

The improvement in the steel trade in the States continues and the situation is strong, particularly in open-hearth steel, for which there is a continued heavy demand. Prices on open-hearth products are very strong, and prices are almost certain to be higher. There is a continued heavy demand for rounds for shells and prices are holding very firm. A scarcity of wire rods is reported and quotations have advanced to $30, Pittsburgh. There is an active demand for billets and prices are firm at the advance announced last week.

Pig Iron

There is no change in the pig iron situation and conditions in the market continue much the same. Quotations on all brands are unchanged.

Scrap Metals

Prices of scrap metals, particularly copper, are firm, and heavy melting steel is strong. Fair business is reported and quotations are unchanged.

Machine Tools

Activity in the machine tool business is not so much marked as a few weeks ago, and there is a lessening demand for new tools. Deliveries are still very backward, which is causing a more active demand for second-hand tools. The probability of further shell orders being distributed is interesting the trade, and a revival in business is anticipated shortly.

Metals

Tin is unchanged, and there is little demand locally. Local quotations range from 39c to 40c. Copper is firmer in the primary markets, and there is a better demand locally, with quotations unchanged at 19½c to 20c. Spelter is in fair demand and unchanged, with quotations ranging from 16½c to 17½c. Lead is unchanged and quiet. Local quotations on lead are 6¼c. Stocks of antimony are light and quotations remain at 36c. Aluminum is scarce and the demand is increasing. There is a wide range of prices, ranging from 40c to 50c per pound.

The general demand for metals is poor, but there is a steady call for metals used in many munitions of war.

Binder Twine.—During the past week very few orders have been received for binder twine, indicating that harvest operations are about finished. Jobbers state that the demand during the season was beyond expectations, but the demands were supplied.

Rope.—Rope prices are firm, and are being maintained generally. A fair amount of business is being transacted on the local markets, with the bulk of the orders going to the country trade. The following base prices are ruling on the local markets:

Pure Manila	16c lb. base.
British Manila	13½c „ „
African hemp	13½c „ „
Sisal	11½c „ „

Hay Wire Advances.—Annealed cut hay baling wire has advanced 15c per 100 lbs. The increase in the price of wire rods has necessitated a further increase in the price of this product. This is the second advance in two weeks in the price of hay wire, which makes quotations on the local markets as follows:

	Per 100 lbs.
No. 9	$3.90
No. 10	3.95

No. 11	4.05
Nos. 12 and 13	4.15
No. 13½	4.25
No. 14	4.40
No. 15	4.65

Wire Fence.—The price of fence wire has also advanced 15c per 100 lbs. to cover the increase in the price of wire rods, which now makes quotations on the Toronto markets at the following figures:

	Per 100 lbs.
O and A, No. 10	$2.61
O and A, No. 11	2.67
O and A, No. 12	2.75

Wire Bale Ties.—Single loop wire bale ties have advanced 15c per cwt. Quotations on the local markets are as follows:

	Per 100 lbs.
No. 12	$3.20
No. 13	3.30
No. 13½	3.35
No. 14	3.45
No. 15	3.65

Wire Smooth Steel.—A new base price is now in effect on smooth steel wire. The base price of $2.60 per 100 lbs. for gauges 0-9 is being quoted, with the usual extras for other gauges, which are to be found in the current quotations.

Fence Staples.—Bright and galvanized staples have advanced in price 10c per 100 lbs. The following prices are being quoted on the local markets:

	Per 100 lbs.
Fence staples, galvanized, in kegs	$3.70
„ „ galv., 25-lb. boxes.	3.95
„ „ bright, in kegs...	2.85
„ „ bright, 25-lb. boxes	2.95

Shotguns.—The advance in the price of single-barrel shotguns, which was predicted last week, has gone into effect. The amount of the increase averages about 40c per gun. This increase is general among local jobbers.

Stoves. — Stove manufacturers are looking forward to a good fall trade, and report that conditions so far are very encouraging. During the past week considerable improvement has been noticed in the stove trade, especially in the Eastern provinces. Orders are being sent in freely by travellers. The general feeling among manufacturers is that the stove business is going to be as good this year as in previous years. Furnaces are not moving so well as in former years owing to the curtailment of building operations in the larger centres.

Peterboro Price List

Copies of price-list pertaining to catalogue No. 7 of the Peterborough Lock Manufacturing Co., are now in the hands of the trade. The list is subjected to a discount of 50-10 per cent. on steel and iron lines, and 50 per cent. on brass. The following goods are sold at net prices porcelain, jet and mineral, japanned mounted knobs, 120 per dozen set; rim locks No. 1516, $1.30 per dozen set.

Galvanized Sheets.—The variation in the price of galvanized sheets is again noticeable on the local markets.

Considerable price-cutting is going on with some firms, while other firms are holding prices firm. The volume of business passing at the present time is very small. The prices shown in the current quotations are being quoted by the majority of jobbers.

Waste.—That the volume of business passing is increasing each month is the statement of local jobbers. The prices on waste are very firm owing to the increased cost in the price of raw material. There is some talk of a further advance going into effect, but nothing definite can be ascertained at the present time. Prices ruling on the Toronto markets are shown in the current quotations.

Brushes.—The brush business is improving. Fall painting activities have commenced a movement in the regular paint brush lines. The prices are firm on all lines, but there are no indications that the price will advance, as was expected some time ago. Jobbers are anxious to get the business, but do not think it would improve business any if an advance in price was made. Bristles are not coming in any better than for some months past, but the jobbers realize that the dealers need the brushes and the jobbers need the business, which really outlines the theory that no advance will take place.

Seasonable Lines.—The movement of seasonable lines from the local sources of supply continues good. Preparations for winter trading are being made by a large number of dealers in the north country, and substantial orders for horse blankets, lanterns, sleigh bells, foot warmers, cow ties, etc., have been shipped during the past week.

Ammunition. — Ammunition of all kinds is moving better than was anticipated. Loaded shells at the present time are moving as in ordinary years, while sporting cartridges are not quite as seasonable, and, therefore, are moving a little slower than loaded shells. Prices are holding firm. Local jobbers' quotations are shown in the current quotations.

Kitchen Utensils.—Enameled ware and tinware kitchen utensils are selling well, and local jobbers state that the coming season will from the present outlook compare very favorably with former seasons. Prices are holding very firm.

LONDON.

LONDON, ONT., Sept. 23.—Local jobbers report business as being fairly good, with a steady increase in the demand for seasonable lines. Improved business is anticipated with the advent of a little colder weather. Travelers are back on the road after attending the Western Fair The fair was a decided success all former attendance records having been broken this year.

Several price changes have gone into effect during the past week. Turpentine has advanced 2c per gallon, while white lead declined 50c per 100 lbs.

Linseed Oil—The price of linseed oil remains very firm on the local markets. The volume of business passing is very small. The prices quoted generally on the local markets are as follows:

1 to 2 barrels...	65c	68c per gal.
3 to 5 barrels...	64c	67c per gal.
6 to 9 barrels...	62c	65c per gal.

Turpentine—There has been an advance of 2c per gallon in the price of turpentine during the past week.

The increase here has been made to cover the increase in price in the primary markets. No improvement in the volume of business passing is noticeable.

The prices quoted on the local market are as follows:

1 barrel lots.....64c per Imp. gal.
2 to 4 barrel lots.....63c per Imp. gal.
5 gallon lots .....71c per Imp. gal.

White Lead—A decline of 50c per 100 lbs. in the price of white lead is reported. The fact that very little business is being transacted and the recent declines in the price of pig lead are responsible in no small way for the decline in the price of white lead.

The new base price is as follows:

Ton lots $10.10 per 100 lbs.
Less than ton lots $10.40 per 100 lbs.

Brass Jack Chain—Brass jack chain has again advanced in price. The prevailing high price for brass is responsible for the further increase. The new discount is now quoted at 20 per cent. off list as against 35 per cent. formerly.

Cow Ties—Cow chains have declined in price to the extent of 10 per cent.

The old price of 40 per cent. off list has been replaced by the new figures of 50 per cent. off list. A new discount of 80 per cent. off list is now quoted on tie out chains.

Pressed steel stall fixtures are also reduced in price, the new price being 75c per doz.

Wire Cloth—Prices for spring booking on painted screen wire are now being quoted as follows:

100 ft. Rolls—$1.50 per sq. ft.
50 ft. Rolls—$1.55 per 100 sq. ft.

This is 5c per 100 sq. ft. cheaper than last year's price.

Harvest Tools—Harvest tools for spring delivery are now being quoted. the discount remaining the same as last year—40-12½ per cent. off list.

Glass.—Glass is moving very slowly, the usual fall trading in cut lights for storm sash being about normal. The following discounts are general on the local markets.

Single diamond 20 per cent. off list

Double diamond ...20 per cent. off list
Cut lights .....20 per cent. off list

Rubber Hose—Prices for rubber hose for spring delivery are being quoted to the trade. There is no change from the price that prevailed this year.

Ammunition, Guns—Loaded shells and rifle cartridges are moving well, also shot guns are selling fairly well. There is a possibility that the price of shot guns will advance in the near future, but nothing definite can be ascertained at the present time.

Nails—Wire nails selling at $2.45 base per 100 lb. keg and cut nails at $2.70 base, per 100 lb. keg are reported to be very firm at the above prices.

Lanterns and Globes—There is exceptionally good business passing in lanterns and lantern globes. The following prices are general on the London markets:

Cold Blast lantern.....$7.25 doz.
Short Pattern, lantern ....$7.25 doz.
Cold Blast lantern globes....50c. doz.
Short pattern lantern globes .65c doz.

Fence Wire—Fence wire is selling fairly well at the present prices and an advance in price is said to be sure to take place in the near future. Present prices on the local markets are as follows:

	Per 100 lbs.
Barb	$3.10
No. 9 Plain galvanized	2.70
No. 12	2.85
No. 13	2.95
No. 9 Coil Spring	2.75
No. 10 O and A	2.61
No. 11 O and A	2.67
No. 12 O and A	2.75

WINNIPEG

WINNIPEG, Sept. 22.—Sorting orders are coming in freely every mail and business is showing steady improvement. Merchants, whose liabilities are rather heavy show a tendency to order goods in small quantities as yet, and this condition will undoubtedly prevail until they have reduced their outstandings materially.

Conditions certainly look bright at this point for an excellent business this fall and through to the holiday season. As a matter of fact, the spirit of optimism is looking to the New Year when old accounts will be settled, and nothing but clear sailing for 1916 is ahead.

It may seem unusual to the retailer that his trade paper should be taking up the cudgels in favor of an energetic collecting campaign, so persistently, but it is decidedly in the interest of the retailers that they collect their accounts. Only by so doing can the wholesalers be paid the amounts due them and the retailer assured of credit accommodation for the coming year.

That most of the retailers are going to show a clear sheet is the opinion expressed by one of the credit men of one of Winnipeg's largest wholesales. He had just returned from an extensive trip through the three prairie provinces when it was my privilege to meet him last Thursday.

"Every merchant whom I met expresses the opinion that this year will see the greatest reduction in his outstanding accounts he has ever made. Each one is impressed with the importance of an extra effort towards this end, and I am quite optimistic about the results we shall all attain." This is surely an encouraging report to make and shows a commendable spirit exists throughout the country.

The past week has been a very quiet one in the various markets, and no important changes are recorded. This is undoubtedly most unusual but will be a welcome diversion.

Shells and guns are enjoying great activity these days since the duck season opened on the fifteenth and chicken are due for a decrease in numbers the first of next month. All the large orders have, of course, been shipped out, but sorting orders are coming in freely. A demand for rifles and ammunition for the big game season is being recorded and all the jobbers look forward to a splendid season's business.

Threshers' supplies are still greatly in demand, and with the increase of small gasoline threshing outfits, an exceptional call for endless belts has been felt.

Oils and greases are still moving in great volume but the manufacturers are handling the situation extremely well. Business in this line has been very heavy this season, but delays in shipping have been few.

OUR DUTY TO THE BLIND

From Vienna, from Paris and from Montreal come reports of arrangements that have been made for the assistance and instruction of soldiers blinded in the war. The French report states that a larger proportion of the combatants have been, and will be, made blind in this war than in any previous war, on account of the difference in weapons and in the character of the fighting. Ontario has provided amply for the instruction of blind children, but has not been a leader in provision for ameliorating the condition of the adult blind. With the added claims of the soldiers who will come home from Europe sightless, action in this matter cannot be long delayed. Our blind soldiers and fellow citizens must not be left to wear out their lives in idleness and sorrow, when timely aid and proper instruction can enable them to resume their places as useful members of the community. The Ontario School for the Blind at Brantford is maintained for the education of children whose sight is so defective that they cannot be taught in the regular public schools. This School is not intended for adults, and it cannot do what is required for the class above referred to, without reducing, if not destroying, its efficiency as an instructor of the young. Bona fide residents of Ontario, between the ages of seven and twenty-one, who cannot see to read ordinary type without injury, are admitted to the School without charge for board, tuition or books. Applications should be made to the Principal, H. F. Gardiner, Brantford, in time to have all arrangements completed before the opening of the session in September.

RAZORS NEEDED TO COMPLETE SHIPMENT

Another shipment of old or spare razors for the troops at the front will be made on September 30, providing three thousand additional razors are received at Toronto by that date. It is a well-known fact that there are hundreds of retail hardwaremen who have collections ranging from one to a dozen or more razors, and are holding them, hoping that the number will be greatly increased before sending them to Toronto. All retailers are earnestly requested to send in their collections without delay. If hardwaremen will send in at once the razors they have collected the required number will be made up in a few days. The need for razors is greater than ever. Every hardwareman can assist in the work of forwarding razors for the use of the troops. Only a few minutes of your time will be required to parcel up your collection and send it along. If you are too busy, ask one of the clerks to do it for you. Hardwaremen will please address all parcels to T. B. Lee, 30 Front St. E., Toronto.

Genuine Open Hearth Iron

Newport Rolling Mill Co., Newport, Ky., has issued a 20-page booklet, entitled "Genuine Open Hearth Iron." The booklet gives interesting information regarding the products of the company.

Most men need a little encouragement and a modicum of praise now and then as a stimulant, while others might develop a bad case of swelled head if allowed to believe that their services were particularly valuable.

Paint Department

The Development of Display Methods

People Spend Money More Freely Now Than in Olden Days — Show Window Largely Responsible for Change

IF the people of a century back could look at the world to-day they would undoubtedly pronounce the present day an age of extravagance. People spend more freely. They make more money and the opportunity to spend it is constantly before them.

Opportunities for merchandising have multiplied many times over in the last twenty or thirty years.

The store window has played a big part in this development. After all is said and done, there is no way to create a desire for goods like showing them. Put the goods out where people can see them and sales are bound to follow. Telling people about goods—through the newspapers—is an effective means of bringing trade but advertising is more effective if backed up by window trims which show people the goods. In the olden days, merchants had not learned this truth and they kept their stock hidden from sight. People went without things which they would otherwise have bought and the commercial horizon was bounded by the actual needs of the people. Then merchants began to find that it paid to display goods and little by little, display methods developed until to-day the store window has become one of the most important parts of the establishment. And the growth of demand kept pace with the development of the display idea. The store window to-day has a great deal to do with the readiness the public displays to buy what pleases it. The person who walks ahead without looking to either side, seldom departs from the path of parsimony. Those who glance at the store windows, see things they want—and buy them.

Window trimming should be placed on a par with newspaper advertising. It is in many respects quite as important and essential.

The fall is one season of the year when special attention should be paid to dressing attractive windows. During the summer, when the hot sun beats down on the pavements, people do not care to lag on their way and they do not as a general rule, show as much interest in store displays. But when fall arrives, with its invigorating coolness, people begin to take a redoubled interest and an attractive store window will be sure to win a lot of attention.

The fall windows should be made distinctive; they should reflect in subtle ways the spirit of the season.

The resources of the window trimmer will be taxed to the utmost to give each display its distinctive setting, and he will find it will serve him in good stead to start in at once to plan his fall campaign.

He needs to bristle with new ideas for it is the fall series of openings that in reality seem to make the store spring into life; they are in reality the beginning of the new store year. Summer with its haphazard trade is passing; the lethargy of heat is thrown off by the purchasing public; their renewed energy stirs them to look with a new vim not only at their own work, but all the numerous sides of their environment, of which your store will form one.

The busy householder is taking steps to improve the home surroundings. Interior decorations are the order of the day, and efforts are put forth to make the home interior attractive. The indoor months are rapidly approaching, and it is the desire of the home lover to have the interior of the home as inviting and attractive as possible. Here is afforded an opportunity to make many sales of paints and varnishes for interior decorating.

Then there is the coming wet and muddy fall weather when floors and linoleums are put through the hardest test. The householder should be reminded that modern floor finishes, in addition to making the floors clean and attractive in appearance will lighten the work of the housewife, and prevent undue wear on the floor or floor coverings.

There is also a certain amount of outside work undertaken during September and October. Every good retail salesman can put forth many good arguments why the fall is a good time to paint. And in going after fall paint trade retailers should not overlook the possibilities of sales to farmers. Farmers are large buyers of paint, but they should buy a great deal more than they do. The farmer's wife as a rule is a liberal buyer of paint for use inside the home. Barn paint is a good line to push hard during the fall. This fall the average farmer is well supplied with money, and his trade is well worth while going after.

But to get back to window displays. The window can be made to do excellent work in helping to sell paints during the fall. Why not put in a good paint window display now, and talk and advertise paint during the next couple of weeks. Try it, and you will find a spurt upwards in your paint, varnish, and brush sales

WEEKLY PAINT MARKETS

(Continued from page 50.)

are unchanged and are reported as very firm.

White Lead.—The recent decline in the price of white lead has helped to improve business a little and local jobbers report an improvement in demand during the past week. Stocks are low in all parts of the country and while the buying of white lead is not what might be called heavy there is a noticeable improvement in the volume of business being transacted among the local jobbers. Some firms have not as yet reduced their price on white lead, while others are selling at the new price. Prices on the local markets are shown in the current quotations.

Gasoline—The price of gasoline is holding very firm on the recent increases. There are no indications of the price declining as local jobbers state that gasoline is very scarce on the American markets. Prices have also advanced in the U.S. markets and are reported firm. The following prices are being maintained on the local markets.

40 gallon drums..—....18c per gallon
40 gallon barrels.....20c per gallon
Tank wagon .....17½c per gallon

Weekly Paint Markets

MONTREAL

MONTREAL, Sept. 23.—While business generally in the paint trade continues without much change, a comparison with a year ago is satisfactory. However, considering the good crops throughout the country, both east and west, the seasonable improvement in the outside districts is not what had been hoped for. On the other hand, there is a demand springing up in certain industries, which have been active on war orders, and this is helping out the city business, although the store trade continues slow, and there is practically nothing moving for building purposes. The comparatively narrow movement in the country districts indicates not only that the consumption is not heavy, but that the retailers are holding to the hand-to-mouth policy of buying, and it is not likely that there will be a general change in this attitude while prices remain at their present high level.

The markets have remained comparatively steady during the week, and the wide spread in oil prices continues. Lead is steady, although easy, and other commodities show no change worthy of note.

Linseed Oil.—A week ago it was reported that the tendency of the linseed oil market was to higher levels in sympathy with the flax market. The top of the price range was then advanced two cents, and it was considered as likely that this would become general within a few days. However, there are indications that the old spirit of competition between the different houses continues, and that advantage has been taken of the recent developments to emphasize the fact that the flax market does not necessarily rule oil quotations to the trade. It would appear that some supply houses have been on the right side of the market, and are prepared to accept profits on their actual costs. The quotation of 60c and 63c which was in effect last week, and which was expected to change, is still officially given to the trade by a leading jobber. The present range is, therefore, as follows, with the prospect that competition will force down the top figures:

	Raw.	Boiled.
1 to 2 barrels	60c-65c	63c-68c
3 to 5 barrels	59c-64c	62c-67c
6 to 9 barrels	58c-63c	61c-66c

White Lead.—There has been no further change in the quotation for white lead, which declined 50c per 100 lbs. a week ago. The pig lead situation has been steady and easy, and in relation thereto the position of white lead is inclined to weakness, although further substantial reductions do not appear likely in the immediate future. Narrow buying, which is the usual feature of a falling market, is a factor for dullness. The basis is $9.95 per ton, with an advance of 30c for smaller lots.

Zinc.—The situation in zinc shows practically no improvement. The sharp declines in the price of spelter have been a favorable influence, but as yet hardly a factor. This state of affairs results from the fact that it is almost impossible to get deliveries of the variety of supplies required for the paint business. Eventually zinc must follow spelter down the price scale, but it may take some time for the situation to right itself.

Turpentine.—The market has disregarded anything in the way of tendencies for firmness, the situation as regards turpentine being similar to that of oil, in that competitive prices are based upon cost and extent of supplies rather than prevailing values. The wide range continues as follows:

	Per gal.
½-barrel lots	61-65c
1-barrel lots	58-62c
2 to 4-barrel lots	57-61c
5 to 10-barrel lots	56-60c

Gasoline and Benzine.—Movement of gasoline continues very fair, with continued open weather, sales making favorable comparison with a year ago. Quotations are unchanged at 17½c for drums and 17c tank wagon. Benzine continues at 14½c for drums and 14c tank wagon.

Glass, Putty, etc.—Glass and putty continue changed, but both are comparatively firm. The demand is small and conditions generally dull, both as to the present and the future outlook. Colors are very unsettled and adjustments continue from time to time.

TORONTO.

TORONTO, Sept 24.—The trade report a fair amount of business transacted during the past week. From present indications it seems as though retailers were holding back in regard to placing orders for ready mixed paints owing to the fairly high prices which are being quoted.

It is not expected that this condition will improve until something definite is known concerning the prices. At the present time the tendency of the market is downward, the recent decline in the price of lead helping very materially in this direction. There are no price changes to report this week.

Linseed Oil—The recent advance of 2c per gallon on linseed oil is holding firm. The price of raw at 65c and boiled at 68c per gallon in 1 to 2 barrels is being quoted generally on the local markets. The volume of business passing is very small, as dealers are looking for lower prices and are only buying in quantities that will suffice for the present demands. City business in linseed oil is very quiet, while the country trade has shown no improvement.

The following prices are general on the local markets.

	Raw	Boiled
1 to 2 barrels...	65c	68c per gal.
3 to 5 barrels...	64c	67c per gal.
6 to 9 barrels...	62c	65c per gal.

Turpentine—The price of turpentine is unchanged from last week. The primary markets are very unsettled and fluctuations were in evidence during the past week. No definite change has been made in the price. A slight improvement has been noticed on the local markets during the past week, and prices generally are being quoted as follows:

Single barrels 64c per Imperial gallon
2 to 4 barrels 63c per Imperial gallon
5 gallon Lots..71c per Imperial gallon

Putty—The demand for putty is still very small and local jobbers do not expect any improvement in the situation until building operations become more active. The following prices are general on the Toronto market:

Bulk in casks.....$2.50 per 100 lbs.
Bulk in 100 lb. drums $2.70 per 100 lbs.
Bulk in 25 lb. drums..$2.80 per 100 lbs.
Bladders in barrels....$3.10 per 100 lbs.

Glass—The prospects for selling more glass are not improving. The usual demands for fall for the storm sash business, etc., are in evidence. Otherwise no improvement has been noticed. Prices

Fifteen Reasons for the Superiority of

SHERWIN-WILLIAMS PAINTS AND VARNISHES

"Because of our Fifty Years' Experience"

"Experience is the Best Teacher"

S-W FLAT TONE

The ideal wall finish

The flat drying oil-paint has come to stay, and S-W Flat-Tone, through its superior qualities, will continue to be the standard of this class of finish.

Flat-Tone excels in covering and working qualities because it is made by special mills of our own design, according to formulas which are scientifically correct.

DURING the long time this Company has been in existence it has been our constant endeavor to turn out the most complete and highest quality line of paints and varnishes on the market.

Years of experimental and research work in connection with raw materials, formulas, and processes, and years of testing in a practical way the various S-W finishes on surfaces and under conditions for which they are intended has resulted in not only a great development in our knowledge of paint and varnish making, but also in an expansion of our line of products to an extent beyond anything the originators of the Company ever dreamed of.

Through the work our chemists, testers, paint makers, and varnish makers have carried on for fifty years we have brought our formulas and equipment to the highest state of development in the paint and varnish field. The men who supervise our manufacturing departments are authorities on anything pertaining to paints and varnishes, and have accumulated their knowledge through their long connections with the S-W Co. In this way we have been able to originate new ideas in paint and varnish making which enables us to maintain our position as leaders in the manufacture of paints and varnishes.

Not a month passes but some new formulas, etc., we are working on are perfected, and an addition is made to our already large and extensive line.

For these reasons our fifty years' experience is an asset to business which cannot be duplicated, and neither can it be reckoned in dollars and cents.

18 and 19 gauge, 5¼c per lb.

WRINGERS.
Royal Canadian, $38 per doz.; Eze, $42 per doz.; Bicycle, $48 per doz.; Ajax, $8 each.

We are not Slaves to Precedent

Though we have been doing business in Winnipeg for over thirty years, no feeling of sentiment or established custom binds us to the methods which won for us our initial success.

Realizing that each day sees the birth of new ideas, we have directed our efforts to keeping pace with the rapid march of events in the business world, and the development of Western Canada.

To every innovation we bring an open mind; and the first question we ask ourselves is to what extent will this benefit our service to our Customers.

We don't stick to any system if we can discover a better one. Perfect though its working seems to us to-day, we believe there may be room for improvement in some branch of our Service, and whatever changes we make you will reap the benefit.

THE PROGRESSIVE MANUFACTURING CO.
Torrington, Conn., U.S.A.

FORSTNER BITS

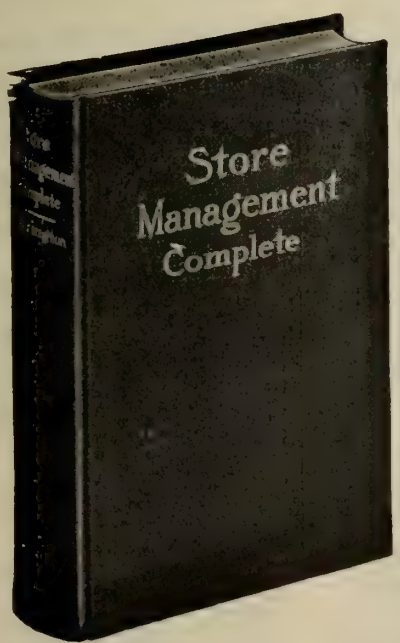
bore their way right through tough, hard, knotty, cross-grained wood and leave a smooth hole and a clean surface. That's performance. THEY DIFFER FROM ALL OTHER BITS, BEING GUIDED BY THE RIM INSTEAD OF THE CENTER. That's scientific construction. They bore any arc of a circle and can be guided in any direction. That's adaptability.

Made for Brace—made for machine. Packed singly—packed in sets. That's convenience. And they sell to Wood Workers, Carpenters, Cabinet Makers and others. That's why you should sell them. Order through your jobber to-day.

TWO CENTS PER WORD

You can talk across the continent for two cents per word with a WANT AD. in this paper

ARE YOU THE MAN AT THE HELM?



Are you running your ship of business along the shortest and safest course to the harbor of success? Or are you going a roundabout way, scratching and scraping along the rocks of loss and failure.

Get in the right course, be on the lookout for new thoughts, ideas, schemes, etc., and you will have a successful run.

STORE MANAGEMENT COMPLETE

is a guide that will show you how to get the maximum trade and profit out of your business. This book is written by Frank Farrington (a companion book to "Retail Advertising Complete.") It tells all about the management of a store. The following is a synopsis of one of the chapters:

CHAPTER V.—THE STORE POLICY—What it should be to hold trade. The money-back plan. Taking back goods. Meeting cut rates. Selling remnants. Delivery goods. Substitution. Handling telephone calls. Courtesy. Rebating railroad fare. Courtesy to customers.

"Store Management—Complete" is bound in cloth, contains 272 pages, 16 full-page illustrations, and 13 chapters. $1.00 brings this book to you postpaid. Money refunded within 10 days if not satisfactory.

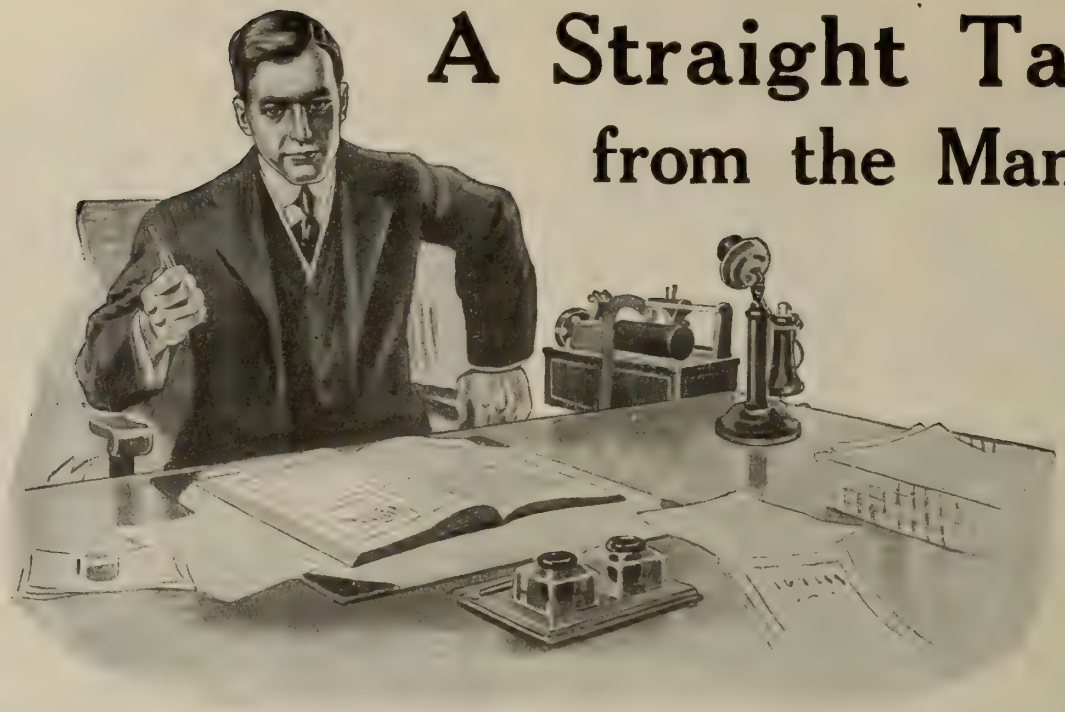
A Straight Talk from the Manager



"Every Right to be Proud"

QUITE often, the members of our staff are encouraged to greater efforts by the receipt of an appreciative letter from some prominent subscriber or advertiser.

Here is an extract from such a letter received a few days ago from L. S. Starrett Company, one of the largest manufacturers of mechanical tools in the world:

"We have noted the article 'Show Cards You Can Make' in your issue of August 21. This is an excellent idea, and, we believe, original with you. We congratulate you on it, as well as on the excellence and progressiveness of Hardware and Metal in general. You have a publication of which you have every right to be proud."

I wonder how many of our subscribers fully realize how high their trade paper stands among the world's hardware publications. The letter quoted above will help them to realize this.

J. G. L.

Condensed or "Want" Advertisements

Those who wish to sell or buy business or stocks, obtain competent help, connect with satisfactory positions, or secure aid in starting new enterprises, should not fail to use the Want Ad. Advertisement Page of HARDWARE AND METAL. It is the central market place of the hardware trade throughout Canada. There is always someone somewhere looking for just such proposition as you have to offer. RATES (payable in advance):—2c. per word first insertion, 1c. per word subsequent insertion, 5c. additional each insertion, when Box Number is required. Each figure counts as one word.

POSITION WANTED

HAVE BEEN ELEVEN YEARS MANAGER and buyer for retail hardware firm carrying all kinds of hardware, also spent several years on the road and in wholesale business, desires position, either with wholesale or retail firm. Best of references. Married. Apply W. D. Dewar, Pembroke. (39)

YOUNG MARRIED MAN, 28 YEARS OF age, six years' experience in hardware business; best references; good salesman. Apply J. A. McLean, Pembroke. (39)

HARDWARE SALESMAN, EIGHT YEARS' experience, desires position in retail or wholesale. Apply Box 215, Hardware & Metal. (39)

HARDWARE CLERK, YOUNG MAN WITH good experience in general hardware, is open for position in good Ontario town or city. Best references. Apply Box 216, Hardware & Metal. (40)

MISCELLANEOUS

FIRE INSURANCE. INSURE IN THE HARTford. Agencies everywhere in Canada.

WAREHOUSE AND FACTORY HEATING systems. Taylor-Forbes Company, Limited. Supplied by the trade throughout Canada. (tf)

ADDING TYPEWRITERS WRITE, ADD OR subtract in one operation. Elliott Fisher, Limited, Room 314, Stair Building, Toronto.

DOUBLE YOUR FLOOR SPACE—BY INstalling an Otis-Fensom hand-power elevator you can use upper floors as stock room or extra selling space, and increase space on ground floor. Costs only $70. Write for catalogue "B." Otis-Fensom Elevator Co., Toronto.

GOOD STENOGRAPHERS ARE WHAT every employer wants. The place to get good stenographers is at the Remington Employment Department. No charge for the service. Remington Typewriter Co., Ltd., 144 Bay St., Toronto.

ESTIMATING. BY EDWARD NICHOLS, Architect. 128 pp., 22 illus. Cloth binding. Containing invaluable information for the use of Architects, Contractors, Builders, Plumbers and Heaters, Painters, Roofers, Cornice-Makers, and other workers in the building trades. This handbook tells just how to go about the task of making an estimate intelligently. Price, postage paid, $1.00. MacLean Publishing Co., Ltd., 143-53 University Ave., Toronto.

HARDWARE STORE BUSINESS METHODS —The authors of the articles in this book are for the most part practical and progressive hardware merchants. The embodiment in these articles of the experience of such able and enterprising men and the suggestiveness of the principles and maxims presented make this volume of infinite value to that trade. The 40 subjects discussed include: Rules and Regulations for the Hardware Store; Hardware Buyer; Good Methods in Stock Taking; Prices and Catalogues; Collecting Accounts; The Merchant and His Employees; Changing Business Conditions and How to Meet Them; Profit Figuring System; Starting in Business; Changing a Credit into a Cash Business, etc. 220 pages. Price $1.10, postage paid. MacLean Pub. Co., 143 University Ave., Toronto.

HARDWARE WINDOW DRESSING—THIS is the first book ever written devoted exclusively to Hardware Display. There are 256 pages and over 200 illustrations with full working descriptions. It is the purpose of this book to illustrate and explain how hardware windows may be dressed to the best advantage—how they can be made to sell goods. It is not a theoretical work but a collection of specimens of the best work and ideas of the most expert window dressers in the world. These men have contributed their experience covering the many phases of hardware window display. This volume, therefore, represents the sum total of information on this subject presented as concisely as is consistent with clearness. By following the simple illustrated directions given in "Hardware Window Dressing" any clever clerk can put in good hardware displays at no cost whatever. Size 8x11 inches. Price $2.60 postpaid. MacLean Pub. Co., 143 University Ave., Toronto.

Stock, etc., may be seen on application to the undersigned.

The highest or any tender not necessarily acceptable.

National Trust Company, Limited

REGINA, SASK.

Atlas

10 Cent Fly Swatter

This swatter has an extra long handle — 10 inches. It is very neatly and securely bound with soft green felt — cannot mar the finest furniture. Especially adapted for parlor or drawing room use. We have made it extra strong and flexible — will outlast any now on the market.

Our 5 cent swatter is the best ever sold for a nickel. Also it has a triangular fold, permitting the insertion of your ad. if you desire.

Now is the time to place stock orders. We'll gladly quote prices and terms.

Atlas Mfg. Co.

New Haven, Conn.

A WANT AD. IN THIS PAPER WILL BRING REPLIES FROM ALL PARTS OF CANADA.

Interested?

In Buying a Business
In Selling a Business
In Engaging a Clerk
In Securing a Position
In Buying a Typewriter
In Selling a Showcase
In Disposing of a Desk
In Selling Tinsmith's Tools
In Securing Shelf Boxes

Then Use a Hardware & Metal Want Ad.

It should find for you among the thousands of Canadian hardwaremen AT LEAST ONE individual who is vitally interested in your proposition.

HARDWARE AND METAL reaches the retailer, the wholesaler, the manufacturer, the clerk and the traveller, the men to whom you wish to sell or from whom you would buy.

No Other Paper Reaches All These Men

RATES:

(PAYABLE IN ADVANCE)

2c. per word, first insertion,
1c. per word subsequent insertion,
5c. extra per insertion for box number if desired.

Stopping an advertisement to save money is like stopping a clock to save time. Advertising is an insurance policy against forgetfulness—it compels people to think of you.—*Galveston News.*

DIRECTORY OF MANUFACTURERS

Hardware and Metal receives, almost daily, enquiries for the names of manufacturers of various lines. These enquiries come from wholesalers, manufacturers and retail dealers, who usually intimate they have looked through Hardware and Metal but cannot find any firm advertising the line in question. In many cases these firms are anxious to secure this information at once. This page enables manufacturers to keep constantly before the trade lines which it would not pay to advertise in larger space.

"AYLMER" Force Pumps

They are certain to sell easily because it has several advantages over the ordinary style.

Has longer stroke, more power, and works easier.

While designed for hand use it can be readily converted into a Windmill Pump by the addition of a flat bar, which screws into the cross head at top.

It will be to your interest to write for full particulars now.

A want ad. in this paper will bring replies from all parts of Canada.

A want ad. in this paper will bring replies from all parts of Canada.

"It is my opinion that for big game the Ross .280 Rifle is the best in the world."

B. K. Miller, Wild Rose, Wis., U.S.A.

Mr. Miller adds:—"I have hunted and fished in various parts of the world, including British East Africa, but I have never seen a gun the equal of the Ross .280 for big game."

Dealers find this rifle, which is enthusiastically praised by the keenest Canadian as well as American sportsmen, a valuable addition to their stock.

The Ross .303 Sporting Models are also very popular.

Their accuracy and reliability combined with their comparatively low price make them universal favourites.

Another good seller is the Ross .22 Cadet Rifle. It is adopted by the Government for Cadet Corps, and is a strong, reliable and accurate arm suitable for the roughest use on camp or trail.

68-R

New McKinnon Specialties

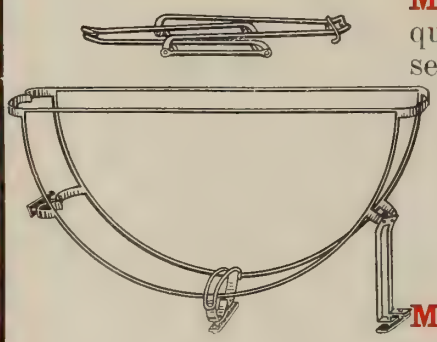
Each one has been thoroughly tested and proven to be of McKinnon Quality simple, light weight and handy to use —pre-eminently practical. Being made of **steel** electrically welded, they are strong and durable. They are destined to be big sellers.

McKINNON STORAGE STANDS are better than jacks for they won't tip over. Guaranteed to hold any car weighing up to 8,000 lbs. Made of **steel** electrically welded. Finished in black japan. Nest nicely for shipping. They'll increase your fall business.

No. 50 is 15¼" high, for smaller cars.	Per set of 4—$2.00
No. 60 is 17" high, for large cars.	Per set of 4—$2.50

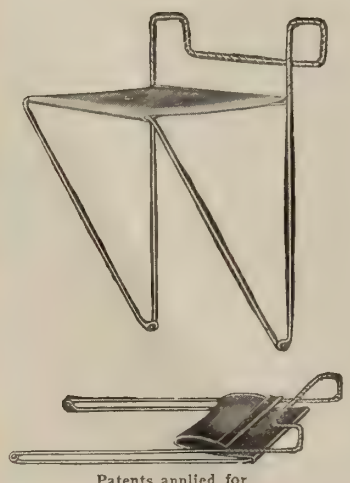
McKINNON MOTORCYCLE STAND takes the weight off the front tire when the cycle is not in use—it makes the tire last longer. It raises the front wheel high enough to make tire repairing easy along the road or in the shop. Folds compactly and can be used on any motorcycle. It weighs but a pound. Finish, white nickel. Each one packed in a separate box.

No. 100—Cycle Stand.	List price—60c each



McKINNON TIRE HOLDERS for Ford Cars can be easily and quickly attached to the running board at the left of the front seat where the tires will be kept cool and clean. They hold the tires securely, and have a simple locking device to prevent theft—no dirty straps or chains. Can be used for smooth or non-skid tires, with or without covers, or demountable rims.

No. 70 for one tire. Weight 6 lbs.	List price—$1.25
No. 75 for two tires. Weight 6¾ lbs.	List price—$1.50



McKINNON NO. 90 SEAT for Ford Cars rests on the door-sill and is held in place by hooking over the top of the door. The weight does **not** come on the door, and the hook is wrapped to prevent marring. Folds compactly and can be carried under the rear seat when not required for use. Upholstered in black Art. Leather, padded. Frame finished in black japan, carefully baked on. The frame is so designed that the door cannot open when the seat is in place.

List price	$1.50 each

Special discounts to dealers and jobbers. Order a sample lot to-day.

A. C. LESLIE & CO., LIMITED
MONTREAL

Made in
La Salle, Ill
— by —
Westclox

BIG Ben is the biggest thing to-day in the American alarm clock industry. He has everything in his favor—quality, looks, and style. He runs on time, he rings on time, he stays on time.

Slender, massive, richly plated, he stands seven inches tall, with well-shaped distinct hands and a big broad dial easily visible in the dim morning light.

He rings just when you want and either way you want—*five straight minutes* or every other half minute *during ten minutes* unless you shut him off.

His keys are large, strong, easy to wind; his voice deep, jolly, pleasing to hear. The movement plates are bridged like on a Waltham watch— you can change both mainsprings *without taking the movement apart.* The pivots are of hard steel piano wire $\frac{22}{1000}$ of an inch thin. The escapement is a hardened steel pallet escapement—not a pin escapement like that of other alarm clocks.

We are carrying on hand a stock of Big Ben specially put up for *Canadian* trade, 6 in a carton together with a full set of Store Selling Helps, (posters and show cards.) On an order for 12 we give a solid mahogany display stand. On an order for 24 we print your name free on dials and with an order for 48 we send a striking, electric flashing sign, just the thing for your window or counter.

The minimum retail Canadian price is $3.00, and there's a $3.00 resale tag on everyone you buy.

Might We Suggest That You Stock Up On Carborundum Knife Sharpeners Right Now?

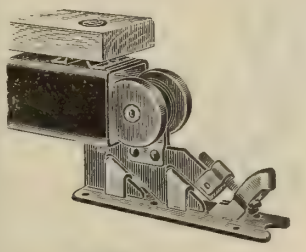
OF course, they sell any time, but in the fall when turkey carving days come you have the logical time to push Carborundum Knife Sharpeners still harder. Show them in your windows along with the carving sets—display them on your counters—your customers will surely be interested in a sharpener that puts an edge on any household knife in a twinkling. A sharpener that really cuts—faster, cleaner than the old-time steel.

Made with genuine stag or wood handle—put up in attractive display cartons.

Better stock up now and be prepared for the carving season. Incidentally they help YOU to a nice slice of profit.

The Carborundum Company
Niagara Falls, N. Y.

"A Hanger for Any Door That Slides"

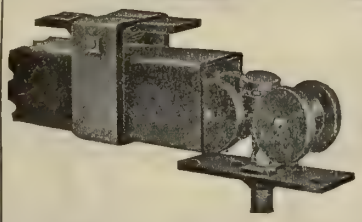


No. 19 HERO TROLLEY
HOUSE DOOR HANGER

Track is removable and adjustable after walls are plastered. Solid fibre wheels. Ball bearings. Low-priced.

No. 321 CHAMPION
BARN DOOR HANGER

For quality of workmanship and fine operation the Champion has no equal. There are cheaper hangers, but none so good. For your good hanger, sell the best.



FOLDING DOORS
The one right way to hang them is on R-W Trolleys.

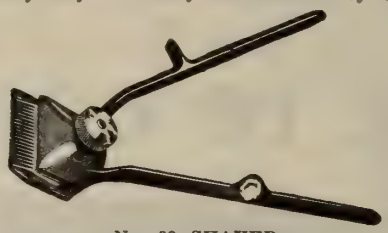
PRIEST'S HORSE and TOILET CLIPPERS

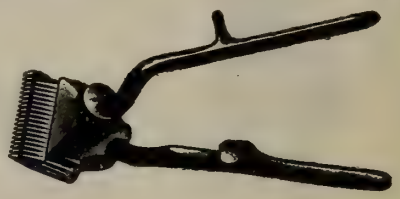
Made by American Shearer Mfg. Co.

present a complete line at a range of prices covering all requirements of the trade. They are all quality goods, and represent best designs and highest standards of workmanship, regardless of price.
Some styles of Toilet Clippers are illustrated below. All are heavily copper plated and polished before nickeling, thus giving a higher finish, which lasts much longer than ordinary plating. The utmost care is used in grinding and tempering the cutting plates, giving cutting qualities whose superiority may be readily demonstrated by comparison. No. 00 and No. 000 Shaver for beard and neck trimming, are clippers of the utmost lightness and refinement, not paralleled by any other American manufacturer.

STANDARD No. 0, No. 1 and No. 2.
Retailing at about $2.50. High-class barber's clipper.



No. 00 SHAVER
A light and elegant Clipper for beard and neck trimming. Retailing at about $2.25.



SPEED
Best low-priced Clipper made. Retailing at about $1.00.

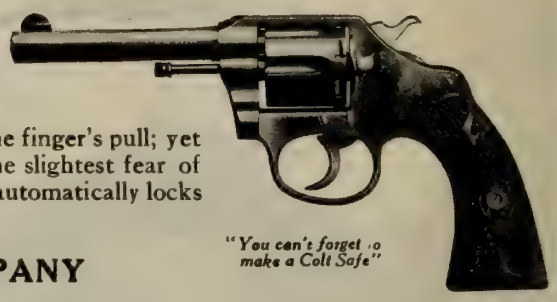
DEALERS:

Below is our "Copy" running in the general magazines. If it brings an "inquiry" into your store, strengthen the selling talk by a personal demonstration of the SAFETY OF COLT REVOLVERS

Meet the Danger Moment Prepared!

Prepare against that day when, unexpectedly, you must leave your family alone over night. Then it may be that at an instant's peril will mean the **safety** of cool calculation or the danger of frantic desperation. If your wife is armed with a Colt Revolver, confidence will steady her grip against the moment's need.



COLT REVOLVERS

are ready at an instant's call. Quick as a flash, they respond to the finger's pull; yet they can be confidently handled by gun-shy women without the slightest fear of accident, because the "Positive Lock" (found only in a COLT) automatically locks the action until the trigger is purposely pulled to fire a shot.

COLT'S PATENT FIRE ARMS COMPANY

MORE SALES MORE EASILY MADE

—that's what SELLING points like these mean.

The customer that is sold a tool which meets his every need is a customer SATISFIED—you can depend on him to come back. When you sell customers tools with the special features you can offer in MILLERS FALLS Tools, you are building for future trade as well as securing present-day substantial profits.

Now in this Millers Falls Hand Drill No. 1980 some of the special advantages you can point out are the instantaneous gear-shift, operated by the touch of a finger, without removing the drill from the hole. The simple, effective ratchet instantly adjustable to either direction, which permits work with this tool in closely cramped quarters, corners, etc. The accurately centering vise-like grip "STAR" chuck with jaw springs protected from injury. Grip handles and main handle all removable. Main handle hollow, forming a container for the drills up to the capacity of the chuck. Steel pinions and shifting device protected by being enclosed. And all built to a master-workman's standard of Quality.

Millers Falls Tools will help you secure and build up a profitable tool trade. Besides this hand drill, some of the other ready sellers are Bit Brace 772, Hack Saw Frame 1027, "STAR" Hack Blades and Bench Drill 210. Send for catalog showing complete line of over 500 tools.

JOHNS-MANVILLE SERVICE
COVERS THE CONTINENT

THE man who buys roofing from you has two things on his mind,—quality and price. The roofing must meet his demands as to quality and the price must be attractive and reasonable. But you as a Dealer are primarily concerned in the profit on that roofing—you pay for the service you render.

A roofing that meets the consumer on quality, the dealer on profit—and both on price—J-M REGAL

The manufacturer should take care of both these demands—consumer and dealer.

And this is just what the Johns-Manville Co. has done with J-M Regal Roofing.

Just the best Rubber Type Roofing possible, so perfected in manufacture and distribution that you can sell it fast, sell it at a profit and at a reasonable price.

When you handle J-M Regal you will realize the wisdom of handling a national product of a National Service Institution.

"YANKEE" VISE

No. 1993

WITH SWIVEL BASE

A GREAT LITTLE VISE FOR A BIG LOT OF WORK

An entirely new feature in vises, quickly appreciated by Tool Makers, Machinists, Electricians, Amateurs and all users of high-grade labor-saving tools.

Quickly detached from swivel base by the turn of a set screw; and being accurately machined all over can be used in any position as a jig for special work on drill press, shaper, etc.

Holds work rigid at any angle with use of the special grooved block.

The swivel base is easily and firmly locked and released in any position by a short movement of lever at the side.

Jaws 2¾" wide, 1⅞" deep, opening 3⅛", Base 7½" long.

Your Jobber will supply you.

Let the FAMOUS FIVE "Do Their Bit" For You

The "Famous Five" can't build up a ruined business. Nor can they pay ALL the "over-head" of an up-to-date store.

But—they will pay you a NET yearly profit, unexcelled on any other line.

They will "do their bit"—and a good bit more—to make your store a source of perpetual profit.

They can be stocked in small quantities—and yet meet every demand of your trade.

They can be turned over rapidly — many times yearly—and yield a handsome profit every "turn."

They can be sold with the absolute assurance of QUALITY—uniform in every file.

They can be put in with the satisfying knowledge that no one can beat you on price.

And they can be most profitably pushed with the aid of our consistent advertising — to teach the **Economy** of **Using More Files.**

For small stocks—quick sales—trade-winning QUALITY—and more net profit from Files —concentrate on one of the "Famous Five":

TOBOGGANS—"THE CANADIAN MAID"

TWO GREAT FEATURES OF "THE CANADIAN MAID"

First—The Raised Front. For about eighteen inches the front of the toboggan has a gradual slant. Result—the toboggan does not PUSH the snow in front of it, and thus you have GREATER SPEED, AN EVEN AND COMFORTABLE MOTION and a LONGER RIDE. Note this sketch—which shows how other toboggans without this feature shove the snow along.

Second—The Three Runners—which give emphasis to the above-mentioned feature and which guarantee safety, as it aids in controlling the toboggan. The runners hold the toboggan to the track. With two, six or eight passengers, the "Canadian Maid" No. 4 toboggan is equally easy to control, the runners helping materially. Accidents have occurred which can be explained by the fact that the usual flat-bottom toboggan was used. Iron and steel Runners fitted at slight additional cost.

PACK-TOBOGGANS A SPECIALTY. Full information on request. Write for Prices and Dealers' Discounts.

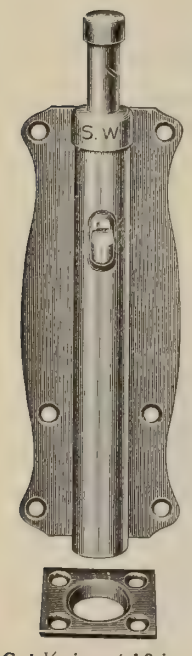
Stanley Wrot Steel Foot Bolts

In 3, 6 and 10 inch sizes

A Foot Bolt Is No Better Than Its Spring



Cut ¼ size of 10-in.

ONE indication of quality in these bolts is the Stanley Sherardized Spring. This process affords as good a protection against rust as it is possible to obtain, and guarantees long life to the bolt. The springs are made of the best grade of piano wire.

Stanley Wrot Steel Foot Bolts are strongly built, handsomely finished and are as strong sellers as they are strong in service. They exemplify "Stanley Quality" throughout.

The cap and release are of solid bronze. The floor plates are cupped to guide the bolt and have oval-shaped holes to take care of shrinkage in the door without resetting plate.

The 10-inch style is designed for heavy garage and warehouse doors. The 6-inch is for ordinary doors, and the 3-inch for double screen doors, cupboards, closets, etc.

10-inch, one in a box with screws; 6-inch and 3-inch, one-half dozen in a box with screws.

Ask us for circular "R".

Optimism the Keynote of Banquet

Canadian Wholesalers Hold Their Annual Dinner — Leaders of Canadian Hardware Trade Have Confidence in Future—Sympathy of United States Expressed by American Manufacturer — Methods of Government Depts. Criticized

ONE of the most enjoyable functions of the year among Canadian business men has always been the Annual Banquet tendered by the Canadian Wholesale Hardware Association to the hardware manufacturers and trade press of the country. It may be safely said, however, that this year's banquet, held in the King Edward Hotel, Toronto, Tuesday evening of this week, set an absolutely new standard. President Williamson had excelled himself in planning the details of the banquet, and the hundred guests were treated at every turn with some enjoyable surprise, all of which contributed to make this dinner a record-breaker.

On being ushered into the banqueting hall, the guests were at once introduced to one of the unique features of the banquet in the arrangement of the tables in the shape of a horseshoe. The effect was very handsome indeed, and it also contributed very materially to the good fellowship of the occasion, as it brought the guests more closely together than perhaps any other arrangement could have done.

At each table was a song sheet containing the words of over thirty patriotic and popular songs, a very handsomely gotten up menu card with the flags of Great Britain and Canada crossed on the front cover, and as a special thought of President Williamson, a sprig of heather and a badge containing a composite flag made up of the flags of all the allied nations, with the words, "United We Stand." The heather was the first intimation to the guests of the decidedly Scotch atmosphere which was to permeate the whole proceedings.

OFFICERS OF CANADIAN WHOLESALE HARDWARE ASSOCIATION

The newly elected officers of the Canadian Wholesale Hardware Association are as follows: President, Joseph W. Dowling, of Caverhill, Learmont & Co., Montreal; Vice-President, Samuel R. Kennedy, of Kennedy Hardware Co., Toronto; Executive Committee, Geo. C. Davis, of Frothingham & Workman, Ltd., Montreal; H. Edmund Dupre, of Chinic Hardware Co., Quebec, Que.; Norman Howden, of D. H. Howden & Co., London, Ont.; Robert Starke, of Starke, Seybold & Co., Montreal; Thos. M. Birkett, Jr., of Thos. Birkett & Sons, Ottawa; Secretary, James Hardy, Toronto.

The menu, was even a little better than usual, which is saying a great deal, and when hunger had been appeased, the president rose to propose the toast of "The King," which was drunk with fervor.

President Williamson then extended his welcome to the many guests present at the banquet, after which the veteran Secretary, James Hardy, read the telegrams and letters of regret from many prominent friends of the Canadian Wholesale Hardware Association who were unavoidably absent.

The toast of the evening, "Canada," was then proposed and was coupled with the name of Richard Blain, M.P., Brampton, Ont., President Williamson emphasizing the fact that it had not been necesary to go outside the hardware

trade to secure the speaker of the evening. Mr. Blain opened by saying that when he, a retail hardwareman, found himself among a gathering of wholesalers and manufacturers of hardware, he felt very keenly the distinction between the city and the country but was encouraged to know that most of the successful business around the table, had come from the country to the city and had made good largely on account of their country training. He had found that there were big men and honest men in the hardware business. The men behind the great commercial concerns of the day are anxious to do what is right between buyer and seller. Mr. Blain said that he believed in men of similar interest coming together and comparing notes in some such way as they do at the annual convention of the Canadian Wholesale Hardware Association as it helps them all to realize that as hardware men they are all much the same in their ambitions and ideals.

"Let us see to it," said Mr. Blain, "that we bring the very best we have into the hardware trade. In bringing young men into the wholesale or retail houses to learn the wholesale or retail hardware business, let us see to it that they have the proper education as a

CYRUS BIRGE
of Steel Co., Canada

groundwork to fit them for the positions which they will fill in the future of our trade. To-day, you wholesalers are sending out catalogues which were unknown in other days. The catalogues now take the place of the trunks, and it is all the more important that there should be a higher stamp of education among those who are brought into the trade."

Mr. Blain referred to the great chasm which had unfortunately grown up between agricultural and manufacturing interests. He thought that every effort

GEO. C. DAVIS
of Frothingham & Workman, Montreal

should be put forth to make the agricultural interests more familiar with the big business men of the country and he suggested that representative agriculturists should be invited to attend such banquets as that of the Canadian Wholesale Hardware Association.

Referring more particularly to Canada, Mr. Blain declared that in the long years of peace which followed Confederation, the people of Canada had shown themselves a great and progressive people. During the past 12 months they have also shown themselves great in war. As for those who stay at home, the dull times which have resulted from the war will really be a help to us as they compel us to struggle and to develop the best that is in us. The breaking out of this war, said Mr. Blain, brought a new lesson of how dependent we are on other nations. As a Britisher, he could not help but feel shame on account of the fact that many of the most essential ingredients required for the manufacture of munitions had formerly been procured from Germany, instead of being developed in our own Empire. There was much to be said against buying in the cheapest markets and selling in the dearest. "We have German goods on our shelves," declared the speaker, "and we have them yet. The war has taught us that our duty as Canadian people, in war or peace, is to see that our requirements shall be grown or manufactured in our own Canada, and if that is not feasible, then at least, within the British Empire." In closing, Mr. Blain referred to President Williamson's introduction of him as a politician. "I am not a politician," said he, with a sly glance at the chair, "but I have faith in your President after a while."

The next toast proposed was that of "Our Guests." Cyrus Birge in being introduced to respond to the toast wes referred to as being a famous manufacturer of screws and the pioneer of the screw industry in Canada, now a prominent officer of the Steel Company of Canada.

Mr. Birge stated that he did not come among the jobbers as a total stranger, as he had spent many pleasant and unpleasant times with them. Referring to business conditions, Mr. Birge briefly reviewed the strenuous year and a half which we have passed through, emphasizing the fact that prices have been low, but that to-day the price of steel all over America has advanced very materially. "You jobbers," said he, "are very fond of prompt delivery, but you must be warned that prompt delivery will be more difficult in the future, and, in fact, it is impossible even now to get some products in less than six months after placing orders." Mr. Birge stated that he was an optimist and that the future looked very bright to him. He referred to the statement of Judge Gary of the United States Steel Corporation, who was of the opinion that America would experience the greatest prosperity in its history after the conclusion of the war. It had been the experience in Canada that when business was booming in the United States, the boom was also reflected in this country, and it was for this reason that Mr. Birge felt more optimistic as to the future of the Dominion.

J. C. Chaplin of the Welland Vale

JAS. A. HOSSACK
of the Lufkin Rule Co.

Mfg. Co., St. Catharines, was then called upon and spoke of the satisfaction it afforded him to be present at this pleasant dinner after the drilling he had gone through in the morning session. He was pleased to hear the optimistic opinion of Mr. Birge which reflected his own impression.

C. W. Asbury, of the Enterprise Mfg. Co., Philadelphia, and a former

president of the American Hardware Manufacturers' Association, was received with enthusiasm. He said that he had been frequently asked since coming to Canada about the condition of business in the United States, and he could truthfully say that he thought it was headed in the right direction. Although business interests have been subjected in the past year to a strain unprecedented, and those who had had extensive export trade had suffered in particular, he thought that present conditions pointed to a material improvement.

Mr. Asbury referred to Mr. Blain's remark regarding the chasm which had been fixed between the agricultural interest on the one side and the merchants and manufacturers on the other. Efforts had been made by a certain section of the United States press to create a separation of classes. The numerous articles which were published on what was called "Frenzied Finance" were destructive of confidence. The farmers of the West and the planters of the South became suspicious of the big business interests of the country. Nothing, he declared, could be more reprehensible. "We need unity of thought and deed," he said. "When you rob the nation of the incentive of individual initiative, you destroy the best we have."

A year ago, at the Wholesalers' banquet at Montreal, Mr. Asbury had spoken only briefly about the position of the United States in the war, because of the strict neutrality which had been enjoined upon the citizens of his country. "Now," said he, "I feel that I can speak more freely than a year ago. Large contracts have been placed with our manufacturers by the allies and our factories are being run 24 hours a day and seven days a week without any holiday. This is not being done for profit alone. We are glad to do it, because our sympathy as a nation is with you in your conflict. The United States has been stirred to the depths by two words—Belgium and Lusitania."

Mr. Asbury told of a visit which he paid to France in February and March of this year. He found the people of France determined to see a glorious end to the war. Tremendous sacrifices were being made by all the people, and any politician proposing a dishonorable peace could not last ten minutes. "There are some things worse than war," said Mr. Asbury, "and one of them is the sacrifice of national honor."

Lieut.-Col. J. B. Maclean, publisher of Hardware and Metal, was introduced by President Williamson as a soldier, and one who had a message which he wanted carried to Garcia. Col. Maclean expressed his pleasure at hearing the words of Mr. Asbury, and mentioned that if it had not been for the United States Ambassador to Germany he would probably now be a prisoner in Bohemia. We in Canada had sometimes felt that the politicians in the United States had not treated us well, but all differences have been adjusted. Col. Maclean spoke at some length on conditions in trade, the outlook for the future, and what we must do to ensure future prosperity of the country. His remarks will be found elsewhere in this issue.

Arthur Hatch, of the Canada Steel Goods Co., Hamilton, had some good new stories to tell, and then pointed out to the wholesalers in all seriousness that they had a responsibility to the people in this country to supply the merchandise that would keep the country going. Steel is going up, and it was necessary for the jobbers to anticipate their requirements now, so as to make sure that they will be able to supply the demands of the country in the immediate future.

The toast "Our Association" was responded to by Jos. Dowling, of Caverhill, Learmont & Co., Montreal, the newly-elected president of the association. He referred to the great benefit which the association had been to the trade and to the business interests of Canada in general. Because no two men have the same thought and ideas, business men are liable to have unfortunate misunderstandings unless they can get together and become better acquainted with each other.

In proposing the toast of "Our Sister Association," President Williamson regretted the fact that both President C. W. Conn and Secretary W. F. Macpherson, of the Ontario Retail Hardware & Stove Dealers' Association, were unable to attend the banquet. There was an officer of the Canadian Hardware Manufacturers' Exhibitors' Association whom he asked to respond for that association, not with a speech, but with a recitation from Drummond.

J. A. Hossack, sales manager of the Lufkin Rule Co., and vice-president of the Canadian Hardware Manufacturers' Exhibitors' Association, then recited "Napoleon Dore" in his usual splendid style. When he was finished, everyone was ready to admit the truth of President Williamson's statement that Mr. Hossack can recite Drummond better than any other man in Canada.

F. M. Tobin, secretary of the Canadian Hardware Manufacturers' Exhibitors' Association, was also called on, and made a neat little patriotic speech, on the conclusion of which President Williamson announced that Mr. Tobin had a son fighting for his country with the first Canadian contingent.

After the toast of "The Ladies" had been fitly responded to by Thos. Birkett, of Ottawa, Cyrus Birge proposed "Our Hosts," coupled with the name of T. B. Williamson, who had so ably fulfilled the duties of president of the association in the past year, and especially those of toastmaster at the banquet.

Mr. Williamson, in replying, said that there had been a question about holding the banquet at this year's convention, but the recent victories of the allies had enabled them to hold it under the most glorious circumstances, and had justified the association's decision to continue this feature of their annual convention.

The banquet was brought to a close by the guests standing and singing Auld Lang Syne in the traditional style, followed by "God Save the King."

That the many unique features introduced into this year's banquet by President Williamson were appreciated was shown by the congratulations which were showered on him by the guests as they left the banquet hall. The following guests were present at the dinner:

S. H. Alexander, Wood, Vallance & Co., Hamilton; C. W. Asbury, Enterprise Mfg. Co., Philadelphia; Chas. L. Bailey, Jessop Steel Co., Toronto; Geo. B. Ball, A. C. Leslie & Co., Toronto; C. A. Birge, Steel Company of Canada, Hamilton; H. J. Badden, Jenkins & Hardy, Toronto; Thos. Birkett, Jr., Thos. Birkett & Sons, Ottawa; Geo. Boyd, Steel Co. of Canada, Montreal; J. D. Brown, Drummond, McCall Co., Toronto; R. Blain, M.P., Brampton; F. C. Brunke, U. S. Steel Products Co., Toronto; J. D. Chaplin, Welland Vale Mfg. Co., St. Catharines; Geo. A. Childs, U. S. Steel Products Co., Montreal; W. L. Cummer, Cummer-Dowswell, Hamilton; Hy. Clucas, Canada Paint Co., Toronto; S. Y. Dingee, Henry Disston & Sons, Toronto; Geo. M. Dunk, Dominion Cartridge Co., Toronto; J. Dowling, Caverhill, Learmont & Co., Montreal; A. Donald, Canada Wire & Iron Goods Co., Hamilton; J. Eatough, Dominion Tack Co., Galt; W. L. Edmonds, Commercial Press, Toronto; D. H. Foster, H. S. Howland, Sons & Co., Toronto; C. H. Fleming, Capewell Horse Nail Co., Toronto; E. B. Fielding, Parmenter & Bulloch, Toronto; A. E. Tobin, Tobin Arms Co., Woodstock; W. E. Vallance, Wood, Vallance Co., Hamilton; L. N. Vanstone, Vanstone, Reade Co., Toronto; C. A. Whitwam, Hobbs Hdwe. Co., London; T. B. Williamson, H. S. Howland, Sons & Co., Toronto; N. Wylie, Sheet Metal Products Co., Toronto; Weston Wrigley, H. Gagnier, Ltd.; J. H. Webber, Steel Co. of Canada, Toronto; W. R. Yendall, Richards-Wilcox Canadian Co., London.

What Must We Do to Insure Prosperity?

An Address Delivered by Lt.-Col. J. B. Maclean, Publisher of Hardware and Metal, at the Annual Banquet of The Canadian Wholesale Hardware Association

THE immediate outlook for business in Canada is more promising than it has been for several years, but the more distant prospect is causing much anxiety to those who have invested all their life savings in Canadian industry. And, this means practically every business man, and, particularly, every manufacturer. Very few have been able to withdraw their profits and put them into endowment insurance, bonds and mortgages and similar investments to take them through times of depression. On the other hand, nearly all have had to put not only their profits but pledge their credit for money, for business developments and extensions to keep up with the abnormal demands due to the recent growth of the country.

I am constantly asked by business men, investors and others interested in Canada:—What of the future? Will times be good or bad after the war?

It is difficult for anyone to say. I was in Berlin when the war began, and discussed with the director of one of the greatest German banks—one of the ablest bankers in Europe—the whole situation as it would affect the world's business and financial conditions. He was undoubtedly prepared for a long war, but, of these conditions after the war he said no man can tell. The only possible basis on which to work, he said, was the period of the Franco-Prussian war, but everything now was, and, after the war, would be so different that deductions were interesting but useless.

Some months ago I asked Colonel Denison what the war history of the world showed. No man here as you know stands higher in his knowledge in this respect but particularly in his capacity to grasp the real results and lessons of history. Running rapidly over the great wars from the earliest times he showed me that, no matter how weakened in men and materials by years of war, the winning nations at once entered upon long periods of tremendous prosperity, sometimes extending over a century.

A study of the general situation, and of local conditions in countries that compete with us, leads to the conclusion that Canada is the country that is most ready, and therefore, has a greater opportunity than any other country in the world to benefit by the war. I want to lay emphasis on the word "opportunity." Large areas of rich farming, lumbering, mining and fishing have just been opened by railways, and the population to work and the money to develop these resources are in sight. The war will realize millions of soldiers and munition factory workers to whom Canada is favorably known and who would like to settle here; and, we are next door to the people who will have more money for investment than any country in the world, and who would rather put it into Canadian development than anywhere outside their own boundaries.

But whether we will be prosperous or not; whether times will be good or bad in the next twenty-five years will depend very much upon whether we will organize ourselves to grasp these two opportunities.

The matter will be settled in the next few months or at most in a year or so, and the responsibility centres on one man, Sir Robert Borden, who in his capacity as Prime Minister is General Manager of Canadian business. If Sir Robert Borden gets about him the right men to organize, direct and do the work of building up Canada, we can be made the most progressive and prosperous corner of a world, that will, for a great many years, be far from prosperous. If he does not, the population and wealth will go to our greatest competitors, the South American nations, which for some years have had a public service better equipped and more efficiently directed than ours; and which since the outbreak of the war, have tremendously increased their efforts to secure money and emigrants. Conventions in this connection have been recently held in Washington and New York, and branch banks from the United States have been established in these Southern Republics. Even before the war began 200,000 Russians of the best class were arranging to take up Canadian farms—the beginning of a great movement, it is said. They preferred Canada, but they were finally turned to South America, by the more intelligent work of Spanish-American officials. The latter were appointed because of their capacity to do the work, while the Canadian Department of Immigration is overmanned with officials whose only recommendation was the assistance given in some election contest.

Settlers and production mean prosperity to all Canada, but they are of direct and very vital importance to the hardware and metal industry. If we do not get settlers many departments in this industry will have smokeless chimneys and idle workers. I need only mention the stove industry. These manufacturers have passed into, through and out of a period of great prosperity in the last 20 years. That period coincided exactly with the successful administration of our Immigration Department. Statistics show, under incompetent management, a steady falling off in settlers until in 1896 we got only 16,835. In that year one of the ablest men in public life became our Minister of Immigration. He was a good organizer and executive. The story of his work is an object lesson to business men and particularly sales managers. Under his direction the very best type of settler began to pour in. In his first year, 1897, they increased to 21,716, and from that the arrivals climbed steadily to 402,432 in 1912. Under him our Immigration Department was a highly efficient business organization. With his retirement it has relapsed into a political refuge. The greatest question before Canadian business men and their workers now is the putting of our immigration work in the hands of some great executive who will build up an organization that will secure for us our full measure of settlers from the United States now and from among our Allies after the war is over. He should have the power, regardless of party politics, to secure, without regard to salary, the men whose ability, energy and knowledge of the country best fits them for filling the various positions. We can never get the best results while one party or the other, when in power, appoints men as immigration agents in recognition of party service, who are no more suited to the job than they would be to the pulpit or the bench.

LIEUT.-COL J. B. MACLEAN, Publisher Hardware and Metal

Our Immigration Department to-day is rotten and the same conditions exist in our other Departments which vitally affect the prosperity of the country—in our Department of Trade, our Department of Labor and our Department of Agriculture to a lesser extent. In our Department of Trade we have in Sir George Foster one of the best speakers in public life. He is a credit to his constituency. I vote for him, help him financially in his campaign, and hope to see him re-elected. On the lecture platform I believe he would crowd the houses and could easily earn $10,000 to $15,000 a year, but, as Minister of Trade, he is filling a Sales Manager's place, and as a salesman no one here would pay him $10 a week. There is no man in the Government more anxious to serve his country. And the same may be said of his colleagues, but the fact is they do not know how.

When I returned a year ago from Europe, where I had been going annually for the purpose of studying business and financial conditions, I was shocked to find that Canadian manufacturers were getting few British war orders, and our factories were idle, while millions of dollars had been placed in the States. The British buyer would give Canada the preference, but it is a fact that they were not aware that certain products in which we excel were made in Canada.

I at once began a campaign in The Financial Post, in which I was supported by the various business and technical papers, for the purpose of awakening our Government and the manufacturers themselves to what we were losing..

One of the colleagues of the Minister of Trade and Commerce came to me to argue that it was no part of the duty of the Minister of Trade to secure orders for Canadian manufacturers. After discussing it for some time he realized that the Minister of Trade had an entirely wrong conception of his duties, and shortly after the Government made the following official announcement:

> "The Department of Trade and Commerce is now, for the first time, taking cognizance of, and assisting in every possible manner the Made-in-Canada movement. In the past it was felt that the Department, while always ready and anxious to assist in every possible way Canadian manufacturers and producers to increase their business at home and abroad, it was impossible officially to recognize the Made-in-Canada campaign. However, conditions have changed to-day, etc."

If a Department of Trade and Commerce was not established for the purpose of developing and promoting the sale of Canadian products, what was it for? From a remark made by a former Minister, there is reason to believe they are more interested in imports than exports.

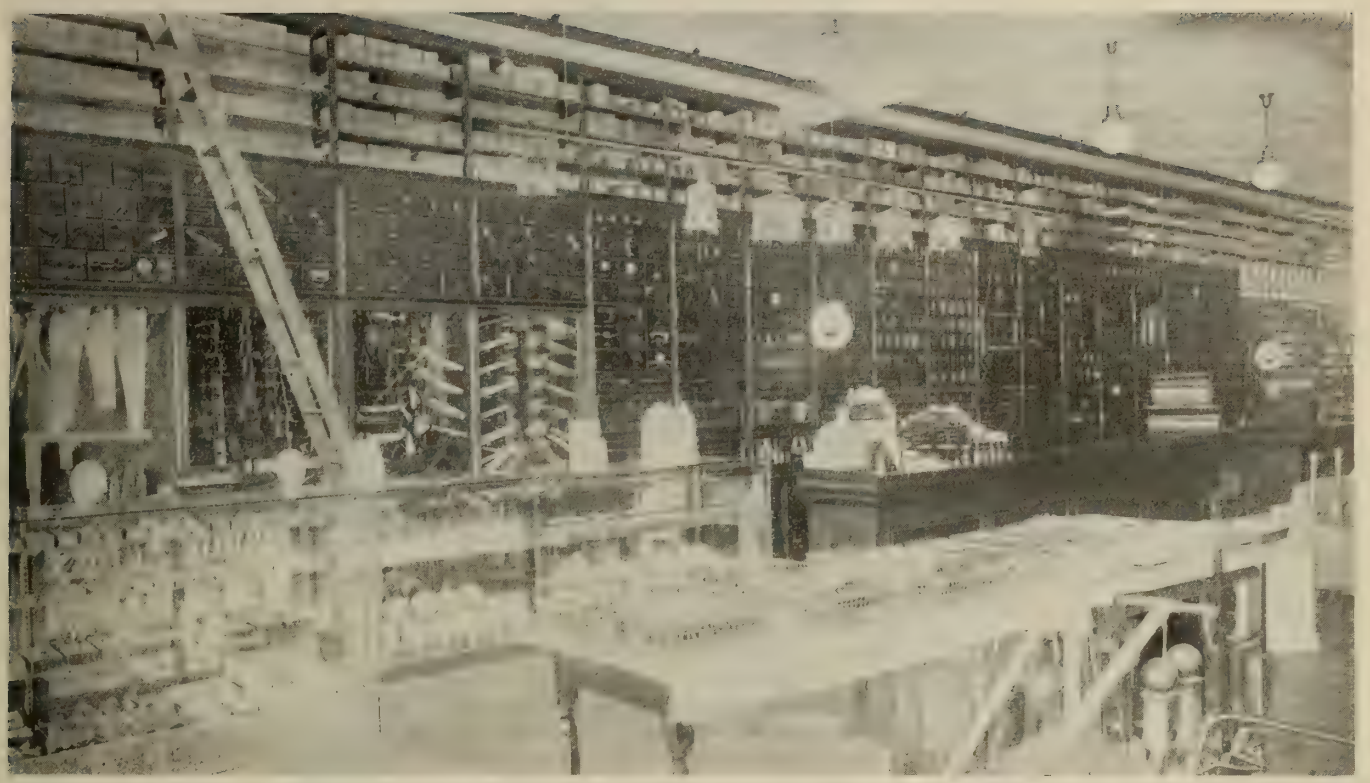
I think you will all agree with me in saying that our system of selecting Cabinet Ministers is all wrong. Germany has made her great successes in business and war because the Kaiser had the power and capacity to gather about him the great business leaders of the Empire.

We ought in this emergency to adopt the same policy and make it permanent when the emergency has passed. No personal considerations or party affiliations should be allowed at this time to influence us or prevent us from organizing to get the best out of an immediate future that will be mighty gloomy if we do not.

It depends very much upon the Ministers of Trade, Agriculture, Labor and Immigration whether you will be able to keep your stores and factories running in the future to their average capacity; whether you will be able to hold your present employees; whether you will be able to pay dividends. It all comes back to whether Sir Robert Borden will break away from system and tradition and secure, particularly for our Immigration and other Departments, the best men in the country.

Can we get them? I believe our big business specialists—the men at the head of our great industries would sacrifice themselves and "do their bit" just as our brave soldiers at the front are doing theirs. To attain these positions these big men must have had the qualities we need in this emergency: imagination to plan and organize the great resources at their disposal; energy to get things done, and done quickly, and a capacity to get about them and train men. They are not talkers, they are workers. They do things and get things done.

Knowing how well Sir Robert has conducted the affairs of the nation so far, it is but natural to believe that he would gladly take advantage of any opportunity or excuse to strengthen his cabinet, feeling, as he must, how great is his responsibility for the future of Canada.



Front, north side of interior of the Manville Hardware Co. store, Prince Albert, Sask.

Modern Equipment in Western Store

Manville Hardware Co., Prince Albert, Sask., Burned Out Last Year, Equip New Store With Modern Fixtures — How Stock is Arranged—Abundance of Display Space

ONE day last year the splendid store of the Manville Hardware Co., Prince Albert, Sask., was destroyed by fire. Undaunted by the misfortune, the firm immediately laid plans for reconstructing the building, and within a comparatively short time were again doing business at the old stand.

Three accompanying views will give the reader a good idea of the interior arrangement of the fixtures and stock. The wall fixtures, silent salesmen and special display fixtures have been designed not only with a view to effective display, but also more effective salesmanship.

This store is a testimonial to the fact that equipment contributes in a large measure to general efficiency, and that a merchant's business from that point of view is entitled to the best that he can possibly afford. The Manville Hardware Co. store is about 100 feet in length by 50 feet wide. The store is situated on a corner and has a side entrance. Two excellent show windows have been provided in the 50-foot frontage, with an entrance between the two windows. On the front, north side of the store, as shown in one of the accompanying views, the wall fixture is 71 feet in length equipped with glass front cases, shelf boxes, drawers, and open shelving at the top for storing surplus stock. This exceptionally long fixture presents a splendid appearance.

In the glass-fronted cases are shown attractive displays of tools, including saws, squares, braces, draw-knives, hammers, planes, etc.

Hundreds of hardware lines are attractively sampled on the fronts of the shelf-boxes. Some of the articles shown on the front of the boxes in the accompanying view are tower bolts, hat and coat hooks, pliers, screw drivers, drills, auger bits, centre bits, nail sets, punches, butts, plated and unplated; chisels, files, meat hooks, awning pulleys, and hundreds of other articles.

In the open shelving, above the shelf boxes, packages containing the surplus stock are neatly arranged.

The upper shelves are reached by portable ladders, two of which are used on the north side. In front of the wall cases, near the store entrance, are two handsome, marble-base silent salesmen, used for displaying cutlery, silverplated ware, alarm clocks, etc.

To the rear of the silent salesmen are two 16-foot counters finished to harmonize with the wall fixtures. The counters in the general hardware section are equipped with special removable nail bins, each of 1 keg capacity, and easily adjustable for filling.

All the marble-base silent salesmen are electrically lighted. The bottom sections of the wall cases are fitted with roomy drawers, each equipped with a heavy brass handle.

On the south side of the store, forty-two feet of deep shelving has been provided for displaying enameled ware, tinware, aluminum ware, japanned wares, and various lines of household hardware.

On this side of the store such lines as stoves, wringers, refrigerators, etc., are displayed. There is also a special glass fronted case (not shown in the photograph) for displaying bath room fixtures.

The central arrangement consists of

three 8-foot glass cases (not shown in photographs) for displaying cutlery and silverware. There are also several tables on which are placed displays of various lines of seasonable goods. Two of the tables have been equipped with wire baskets and trays, in which various lines of kitchen and household hardware are displayed.

In the sporting goods department located about halfway back in the store; a special display case has been provided for displaying guns and rifles. The case is so constructed that both sides can be used for storage and display purposes.

A silent salesman is also used in this department for displaying various lines of sporting goods such as baseball, football and tennis supplies, electrical specialties, hunters' supplies, etc.

Stoves and ranges are displayed near the rear of the store.

Special provision has been made at the rear of the main store interior for storing pipe fittings and other lines of heavy goods.

The paint department is also located towards the rear. A partial view of the department is shown in one of the accompanying views. A large battery of self-measuring pumps is used for drawing oil, turpentine, etc., from tanks located in the basement. The basement is reached by a stairway from the main store interior. The office at the rear, is shown in one of the accompanying views. The store is electrically lighted.

View in paint department of Manville Hardware Co. showing battery of oil pumps.

Drop lights from the ceiling being used for this purpose.

Fire extinguishers are placed at convenient points throughout the store.

The accompanying views although showing only a portion of this modernly-equipped store, will serve to show the reader, how the company has endeavored to equip the store, in such a manner that all goods are effectively displayed and are within easy reach of salesmen and customers.

Prince Albert, Sask., where the store is located is on the North Saskatchewan River, 542 miles northwest of Winnipeg, and about 80 miles north of Saskatoon. The population is in the neighborhood of 12,000, and the city is in the centre of a rich mixed farming district, noted for stock-raising. Prince Albert is the centre of the Judicial District, has provincial jail and penitentiary, lands office, customs office for district, and headquarters of the Royal North-West Mounted Police for central and northern Saskatchewan. It is a picturesque city occupying fine natural townsites with boating, bathing, fishing, shooting, natural parks, etc.

Taking a Chance With Dynamite

St. Bazile, Que., Merchant Saw Need of it to Remove Boulders and Gave a Demonstration—Sales Jumped to 3,000 lbs. Annually—Preparing for Automobile Accessory Business

THERE'S a town in the Province of Quebec called after Saint Bazile. Whether there is more than one saint of that name is not of vital importance to the hardware trade, but we will note in passing that this particular place is recorded on accurate maps and trustworthy gazetteers as Saint Bazile de Pontneuf.

Brakesmen on railway trains found this name incommensurate with the size of the place, and being lazy, they cut out the bridge end of it, and called it simply St. Bazile. From the above it will be gathered that this Quebec town is on a railway. It has even greater distinction. Like Sherbrooke and Quebec City, it has two stations, one on the C. P. R., and the other on the G. T. P. The National Transcontinental Railway went out of its way to touch St. Bazile, but it touched it so slightly, it has been necessary for the town to stretch itself in order to lay claim to the new station. The C. P. R. has served St. Bazile for years.

For a long time this little town with the big name had only a few or so general stores all of which handled a certain amount of hardware. Among them was one run by a man named Hardy. He had a son named Leger, who one day awoke to the fact that a hardware store was needed. So he opened one.

Watches and Fire Insurance

That was ten years ago, and it took St. Bazile de Pontneuf a long time to realize that to run an exclusive store like this, Leger Hardy must have support. For a long time, in order to make things go, he had to get out and hustle. He went from farm house to farm house peddling watches, where he could, and where he couldn't he sold bicycles and fire insurance. Those were his leading lines in the early days.

He still sells them, but his peddling days are over. When a man has spunk enough to go out after business, the day surely comes when he is able to take things easier. Leger Hardy has become a manufacturer, but he still runs his hardware store.

Last week he was in Montreal placing some orders with jobbers there, and called at the office of Hardware and Metal. A story he told upon request, of how he began to handle dynamite, will be instructive, showing as it does, that every hardware store, be it located at the North Pole or at the Equator, has a demand for certain lines more than others.

Famous for Boulders

Mr. Hardy had not been in business long before he observed that the country in which he was raised was remarkable for its boulders. Hardly a farmer but what had some of these obstinate things planted right in the middle of his farm. Not only did they obscure the landscape, but they occupied valuable farming land as well.

He observed further that the methods used by farmers in clearing away stumps were crude, and often ineffective. Moreover, they were making roads in the most laborious and expensive manner possible. Now, while the farmer of Quebec Province, is noted for his conservatism, he is wealthy enough and farsighted enough to-day to adopt twentieth century methods, especially in a district like this, where the ground is so fertile it only requires tickling to grow things.

Gave a Demonstration

Mr. Hardy saw the need of dynamite, but like the farmers, what he knew about it was limited to the fact that when it exploded, something had to move. He sent down to Montreal for a sample, and proceeded to give demonstrations to the St. Bazile farmers.

There must have been some scared farmers in that district, but Ledger Hardy soon dissolved their fears. He proved beyond doubt that dynamite, if handled properly, was as harmless as a kitten.

By carefully following directions on the label, he was able to prove that stumps and boulders need no longer stand in the farmer's way, and that by its use, roadmaking became easy.

His sales jumped the first year to a thousand pounds, and gradually increased until to-day his annual sales amount to over three thousand pounds. And the sales don't stop there. Having become the recognized headquarters for explosives, he is able to make big sales of caps, fuses, picks, hammers, axes, handles, crow bars, and all kinds of heavy hardware.

His Latest Venture

If that were not sufficient proof that St. Bazile's hardware merchant is enterprising, it would only be necessary to draw attention to his latest venture—automobile accessories. There are only about a score of cars in the district, but there are going to be more next year. Already there is a small demand for accessories, and the store now carries a stock of tires and other supplies, which is gradually being added to. As evidence that farmers in this district are not poverty-stricken, let it be stated that the cars here are not Fords. But the Fords will come, and Mr. Hardy, besides being headquarters for explosives, is preparing to nab all the garage business coming that way. Already he has one of his employees trained to handle any repairs necessary.

HARDWARE & METAL

CANADA'S ONLY WEEKLY HARDWARE PAPER

Vol. XXVII. TORONTO, OCTOBER 2, 1915 No. 40

OPTIMISM was the keynote of the Canadian Wholesale Hardwaremen's banquet—Canadian hardwaremen have confidence in the future. A complete report of the proceedings appears in this issue.

* * *

PERSISTENT solicitation is the price of business. Here let it be said that the world likes to buy from those who are keen salesmen; it shuns those who are listless, voiceless, timid or indifferent. If you believe in your own message to men others will believe as you do. This is sure. Sell, therefore, with enthusiasm and with a sound proposal, and money will flow towards you in a way to delight your heart and fill your purse.

SUBURBAN STORES

DURING recent years a great deal has been said and written about the country merchant and his efforts to combat the severe competition of the mail order houses. But there are other merchants who are waging a somewhat similar battle. They are the retailers who are located in the suburbs of our big cities, and have to compete with the large down-town department stores.

The small town merchants do all they can to encourage the spirit of "loyalty to the community." Every effort is put forth to encourage townspeople and the farmers and other residents of the surrounding community to patronize local merchants. The hardware merchant conducting a store in the suburb of a large city is laboring under very much similar circumstances—he has to compete against the large down-town department and variety stores. He looks upon the suburban community in which his store is located, just as the small town merchant looks upon the community in which his store is located. Both merchants are up against keen competitors, but both have many advantages over both department stores and mail order houses. There are several interesting articles in this issue concerning the methods adopted by various merchants to secure the trade of residents in the communities in which their stores are located.

THE COLLECTION QUESTION

ON SEVERAL occasions we have directed attention to that ever important question—collections. Many manufacturers and wholesalers report that there has recently been a decided improvement in collections. The improvement is general, and especially noticeable in the West and can be readily accepted as an evidence of freer circulation. When there is a more or less free circulation of money, business is bound to pick up and the very general report of improved collections can be accepted as the forerunner of a rapid improvement in business generally.

It may be safely asserted that the farmer is prosperous to-day. He has had a good yield and has got a good price for his crops. Merchants in purely agricultural towns have had no reason to complain of business. It is only in manufacturing cities and towns that the grim weight of hard times has been felt. To expect that the unimpaired purchasing power of the agricultural communities will bring about better industrial conditions is not an unreasonable deduction. The undoubted improvement in collections should be accepted by the retailer as a signal to press his own collections. Lucky is the merchant who can say at the present time that his collections have been well maintained. Some have been deterred by the war from pressing the collection of outstanding accounts but, in view of all conditions, there is no valid reason why an active effort should not now be made to clean-up the books.

GOOD IN ADVERSITY

ONE of the largest firms in the world, engaged in the manufacture of farm implements, etc., in a recent issue of its house organ directed the attention of its employees to the following:

"Observation of the relative achievement of different periods leads us to believe that it is not hard times we as a company should dread so much as periods of easy business. The last year, supposedly one of close sales and hard sledding, has brought much to our organization that is desirable.

The loss of business in certain parts of the world

has led us to investigate the possibilities of the remaining territory and has led to a salutary intensive cultivation of sales. It has served to teach us the boundless possibilities of any given territory provided we will concentrate upon it. With our organization and its equipment we can develop an amount of business hitherto unsuspected.

The individual employe, also, has learned much from this experience that will be helpful to him throughout life. Forced economy had reduced the amount of assistance each man has had in the past and all have been compelled to assume greater burdens of work. We have learned that a man can do two or three times as much as he would have believed in easier times, and do this as quickly and thoroughly as ever. We have learned the results that may be secured from concentration and the careful investment of time and energy.

It is in times of plenty that we tend to grow fat and lazy, but in times like these we uncover hidden possibilities."

Just as this large corporation has uncovered hidden possibilities, so have many wholesale and retail hardwaremen throughout Canada. By intensive cultivation of their territories many firms have kept their sales so far this year, on a par with the sales of corresponding periods of former years. In many cases there are retailers whose businesses this year will reach larger proportions than in any previous year in the history of their business careers.

THE STEEL INDUSTRY

A SPEAKER at the Wholesale Hardwaremen's banquet referred to the recent advances in the price of steel and steel products, and also to the difficulty of securing deliveries. It is impossible even now to get some products in less than six months after placing the order. Conditions in Canada and the United States at the present time are much alike in this respect. The American Metal Market this week stated that it is a small matter to the steel mills whether contracts for war munitions are placed directly with American or Canadian manufacturers. The tax upon their resources is equally heavy. It is a significant fact that most of the recent inquiries for projectiles to be exported eventually come from Canadian interests. Negotiations last week called for a heavier tonnage of steel than at any time during the month, but the actual contracts closed for rolled and forged steel aggregated only about 100,000 tons for shipment to domestic and foreign manufacturers over the first quarter next year, including a few thousand tons on each contract for delivery in December.

The demand for wire products continues extremely heavy. Since the first of September total orders for barbed and plain wire and wire rods have been considerably over 100,000 tons, and another inquiry for 100,000 tons is in the market for which Canadian manufacturers are competing actively. In fact, it is understood that a portion of this inquiry has already been satisfied in the Dominion. Shipments are to be made at the rate of 5,000 tons every two weeks, or 10,000 tons per month.

According to Ironmonger, commenting on the general position of the steel works in Sheffield, Eng., "every local steel works is producing to its utmost capacity, although inquiries from private trade sources appear to be easing off. Trade with Scandinavia has suffered a good deal in consequence of the prohibition of the export of various steel products. Although railway stock construction is extremely light in this country, makers of axles, tyres and springs have plenty of work from the home companies and from Colonial sources. Canadian trade shows a decided change for the better. The output of acid steel is at present enormous, as nearly the whole of the many basic furnaces which have been installed during the last ten years are now employed in making Siemens' acid material. Works where engineers' tools are made are in a state of congestion. Huge quantities of picks, spades and crowbars are being sent to the various armies of the Allies.

"There is no relaxation of the pressure for deliveries of high-speed steel and tools of the same material, but owing to the scarcity of labor the output still falls considerably short of the demand, and the number of idle melting holes remains large. The labor deficiency is mainly in teemers and pullers out —tasks in which proficiency can only be attained by years of training. The services of an additional score of such men would make an appreciable difference to the output of steel. A good many of those who enlisted have been brought back to their old occupations, but the military authorities are unwilling to release any who are with the expeditionary forces. Numerous applications for permits to export high-speed steel which had been refused have now been granted, and the material to which they refer is now being shipped. Some of the consignments affected had been lying at various ports for from five to eight weeks. The War Trade Department appears to be carrying out its recent promise to grant all reasonable facilities for the export trade in tool steel to be maintained, and a repetition of the vexations that have arisen out of this matter is unlikely."

A large number of price changes on wire products are reported in this week's issue of HARDWARE AND METAL, and higher prices are predicted for many lines of steel products.

* * *

QUICK TURNOVERS mean quick profits—and that's what we're all in business for.

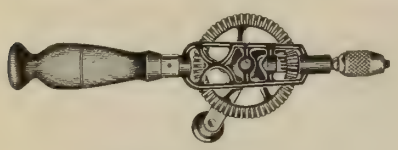
ALL CAN'T go to the front, but those who remain at home can "do their bit" by keeping up their optimism and working hard.

New Hardware Goods

Offered Canadian Hardwaremen

HAND DRILLS NOS. 104 AND 304

Two attractive and practical hand drills have been put upon the market by Millers Falls Co., of Millers Falls, Mass. One special feature is a chuck of new de-



Hand Drill No. 104.

sign that is compact and accurate in centering drills. It has three jaws each in its separate solid socket, and poned by springs that are concealed and will not get out of order. Capacity is for round shanks from 0 to 3/16 inch in diameter. Another feature is the main handle which is of graceful and convenient shape. This is made from birch with deep mahogany stain and has screw cap and hollow receptacle containing eight wood boring points. Gears are cut, small ones being of steel and large gear white nickeled. No. 104 drill has malleable iron frame and one small gear, while No. 304 has solid steel frame with both working and idler small gears.

Both drills are attractively packed and boxes bear the striking new labels recently adopted by the Millers Falls Company.

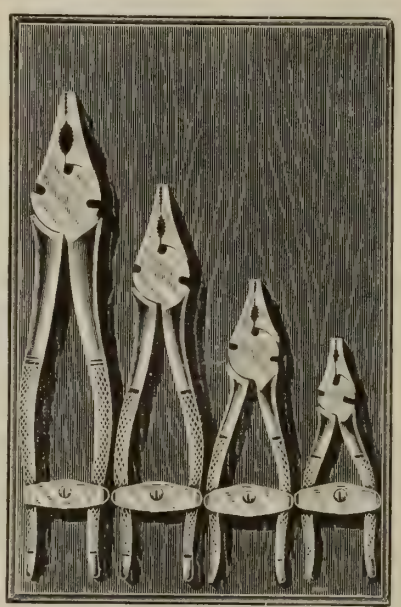
TOOLS ON DISPLAY BOARDS

Smith & Hemenway Co., Inc., manufacturers of Red Devil Tools, are now putting out a standard line of tools on an 8 x 12 inch easel back display board made of three-ply veneer.

These boards are accompanied by enough surplus stock in the back of the package to make a dozen tools, assorted in the average way that they move out to the public.

As an illustration, Fig. No. 1 shows the standard combination button plier in various sizes as shown on the board—5, 6, 8, and 10 inch assorted as follows: two of the 5-inch, three of the 6-inch, five of the 8-inch, and two of the 10-inch.

Combination slip joint pliers are also shown on a display board. The pliers shown on the board, five in number, are mounted on an 8 x 12 inch three ply veneer oak board, the surplus stock underneath. These are assorted as follows (note the two styles), 5 and 6½-inch thin nose, improvement which they have put out on the slip joint plier, and the standard pattern 6½, 8 and 10-inch. Of the new thin nose 5-inch, they have put in three tools, 6½-inch, four tools 6½-inch standard pattern slip joint three tools and one 8-inch, and one 10-inch. This



Plier Display Board

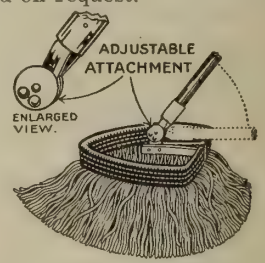
also has the resale prices between the handles, also the number and size.

The company state that they are putting up all standard tools in this way.

ALL-STEEL CONDUCTOR HOOKS AND SILO ROOFS

The Metallic Roofing Co. of Canada, Toronto and Winnipeg, offers to the trade a new product called the Conner All-Steel Conductor Hook, here illustrated. The shank, jaw and strap are all steel. The hook drives straight and true, it is claimed, into mortar or wood—any place that a nail or spike could be driven. The shank is wedge-shaped, and binds solidly wherever driven. A stop regulates distance to drive into wall, and the pipe is held ⅞-inch from wall.

The company is also making two new silo roofs called the "Empire" and the "Gem." The construction of the Empire is said to give absolute protection from fire, lightning, rain, or snow. The Gem is a cheaper roof, but is said to be serviceable, strong and weather-tight. Descriptive matter giving all details will be mailed on request.



Tarbox Improved Mop

NEW ADJUSTABLE HANDLE

Tarbox Bros., Dundas Street, Toronto, announce an improvement in the handle as applied to their triangular dustless mop. The adjustable attachment is shown in the accompanying illustration. The handiness of the mop is in-

All-Steel Conductor Hook

creased by the new attachment, as it allows the mop to assume its normal position to the working surface for dusting under beds, low furniture, walls, etc. The makers claim that Tarbox chemically-treated mops may be used upon wallpaper without danger of smearing.

An excellent window display of household hardware lines.

The Retailers are Forging Ahead

Progress Made by Retail Merchants During Recent Years—Taking on New Lines — Household Goods Carried in Many Hardware Stores—Studying the Needs of the Public

By THOS. E. HUNT

NOT long ago a writer in a contemporary dwelt at considerable length on the shortcomings of the retail merchant. This writer told of the deplorable state of affairs in retail stores he had visited—how the salesmen were not on to their jobs; how the windows were neglected; how many lines of out-of-date goods were carried in stock; how the proprietors were backward in taking on new lines, and how the mail order houses in the distant cities were gobbling up the cream of the trade and doing many millions of dollars worth of business annually throughout the country.

This may be true in a few cases, but only in a few. Retail merchandising to-day is on a higher plane than ever before. The retail merchant to-day has more to contend with—has more competition than the retailer of fifteen or twenty years ago; and yet the retailer to-day is making more progress, has a finer store, dresses better windows, and gives better service than the retailer of a few years ago.

There are throughout Canada to-day thousands of retail merchants who own their businesses, their homes, and incidentally their motor cars. The retail stores to-day are larger and better equipped than they have ever been at any time in the past. The sales staff in the average retail store to-day is more efficient than the average sales staff of a few years back. And last, but not least, the average retailer to-day is not as backward in taking on new lines as some misinformed people would lead you to believe.

The average retailer to-day is on the alert for new and profitable lines. He realizes that if he is to keep up with the trade procession he must sell profitable goods, and goods that the people want.

In order to cope with the ever threatening "rising costs of doing business" the retailer has to be on the look-out for new lines which bear a reasonable margin of profit and are quick sellers. And the man who says that the retail hardwaremen of Canada are falling behind in the march of progress must be sadly misinformed, or he has not made a close study of conditions in the retail hardware field.

All hardwaremen know that if they confined their efforts to selling nails and many other staple lines which bear a very narrow margin of profit, they would soon go out of business. It is true that certain staple lines have to be carried in stock—a hardware store would not be complete without them. But the same hardwaremen know that there are hundreds of other lines which, if sold in sufficient quantities, will make up for the loss sustained on the staple lines and in addition produce a good margin of profit.

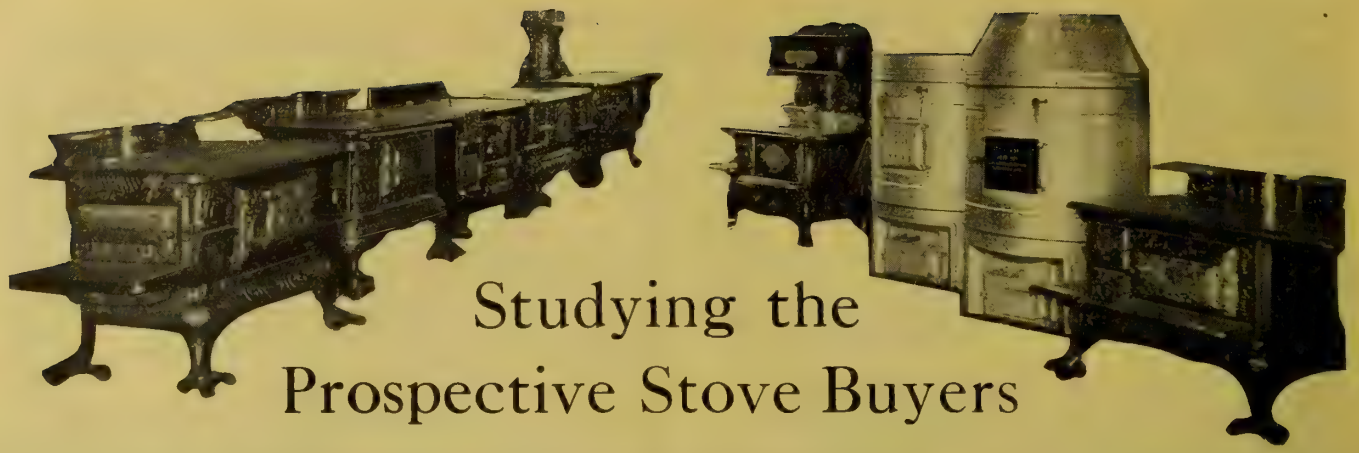
And more than 90 per cent. of the retail hardware trade are pushing the sale of lines which bear a good margin of profit—one of the most important of these lines is household goods.

A prosperous hardwareman told the writer a short time ago that he could, in his town, sell a washboard at 35 cents and make more profit on it than he could on a keg of nails at $3. The same merchant stated that he could sell a dustless mop and make as much profit on it as he could on ten kegs of nails. And the same condition prevails in many towns and cities.

I know a hardwareman who has a turnover of $35,000 a year, and he is making a great deal more money than another merchant who has a turnover of $60,000 in another town less than twenty miles away. The latter merchant does not pay as much attention to the pushing of profit-bearing goods as the former, and although the yearly turnover is large, the net profit is not as great as it should be.

Hundreds of retail hardwaremen, who ten or fifteen years ago looked askance at certain lines of household hardware, are to-day pushing energetically the sale of clothes baskets, ironing and bake boards, brooms, dustless mops, electrical goods, dusters, wire goods, aluminumware, tinware, washing machines, wringers, vacuum cleaners, curtain stretchers, tubs, washboards, and dozens of other

(Continued on page 44.)



Studying the Prospective Stove Buyers

Many Types of Customers Encountered at This Season of the Year—How Some Customers Have to be Treated—Do Not Talk Over the Customer's Head

OF the many customers who visit the stove department of a hardware store at this season of the year, the one who requires the most tactful handling is the one who says, "I am just looking around." Customers of this kind are met quite frequently during the latter part of September and the month of October. Although these customers say they are just looking around, you can rest assured that ninety per cent. of them are good, live, prospective purchasers of stoves, and have in their pockets sufficient money to purchase a stove outright or at least pay down a good deposit.

They are just looking around, of course, but they are open to conviction, and they are ready to give an order to the real live salesman who knows how to handle them. Too many salesmen are inclined to treat "look-around customers" in an indifferent manner, taking it for granted that the customers won't buy anyway until they see all the stoves in town. Salesmen should not look at the matter in that way. It might be true that some of the prospective store customers will keep on travelling until they see all the stoves in town. But, if when they called at your town, you took an interest in them, showed your line of stoves and gave them a good sales-talk, the chances are you would have a return visit.

There are several classes of customers. There is the customer who has almost made up her mind to purchase a stove similar to one owned by a neighbor or friend. Then there is the "show-me" customer who starts out almost prejudiced against all makes of stoves and does not believe that any make of stove is up-to-the-mark. Still another type of customer is the one who closely follows the newspaper advertisements, and after reading the many claims put forth by various manufacturers, she really does not know which stove she likes best. As far as she can figure out, there are several makes of stoves which have many desirable features, but as the buying of a range or heater is one of the events of a life-time, the customer naturally wants to secure the most value for her money, both in appearance and efficiency. There is also the customer who frankly admits that she wants a stove, but will have to visit all the stores before she makes a decision. She meets all kinds of salesmen—the price-cutting salesman—the salesman who talks too much—the salesman who does not talk enough — the salesman who talks enough but does not say the right things—the salesman who talks over the customer's head — the salesman who runs down his competitors' line of stoves — the salesman who does not study his customer—the salesman who does study his customer—the salesman who makes the sale—many of them are called salesmen, but they do not make sales.

Those mentioned are only a few of the many types of customers who are encountered at this season of the year, and they afford a remarkable field of study for the retail salesman. Occasionally you will find a customer who is largely guided by price. This seems to be the main consideration and she wants a lot for her money. This type of customer is greatly in the minority, and is rapidly disappearing. The majority of stove customers want their money's worth, but they want stoves which will be efficient and they are willing to pay a fair price for a good stove—but they have to be shown. The stove field, like many others, is what you might term, "worked to the limit." Manufacturers spend large sums of money each year in advertising their respective lines of stoves and in sales-promotion work. Mail order houses work the stove trade hard. Furniture stores, easy payment concerns and peddlers endeavor to secure a good share of trade, while other manufacturing concerns sell direct to the consumer.

Although competition is admittedly keen, the bulk of the trade passes through the hands of the retail hardware man. Why does the hardware man secure such a large trade? There are several reasons, but the principal reasons are that stoves are a hardware line, and that there are hundreds of real live stove salesmen in Canadian hardware stores to-day who are making a study of stove problems and stove customers, and who are making the best of their opportunities. They are backed up in the work by the national advertising of the manufacturers and the selling helps which the latter provide. These salesmen are in a class by themselves, and they have not reached their present degree of efficiency without a constant study of stove selling. A man may spend 40 years behind a retail counter and never become a stove salesman. On the other hand, a man who applies himself to the work and studies stoves and human nature, can become proficient within a reasonable time. This does not mean that he will learn all there is to learn about stoves, for the man who knows it all has never yet been found. Occasionally you find a man who thinks he knows it all, but he is only deceiving himself.

To be a successful stove salesman, it is necessary to make a study of the line of stoves you carry in stock. But knowledge of the stoves is not all. A salesman should also know how to impart the knowledge to prospective customers. The salesman must not talk over the customer's head by trying to impart too much technical information which in many cases confuses the customer and leads the latter to think that the stove is a very complicated contrivance. You seldom find two prospective stove customers alike. Each one is a separate study. The salesman who knows how to size up the individual customer is the one who generally makes the most sales.

Philbin's Three Stores on One Street

Household Goods One of Chief Selling Lines in Philbin's Three Stores in Residential Section in Montreal—New Branch Opened This Year

TO write the story of the Philbin business it is necessary to go back to the time when the retail centre of Montreal was down town. Forty years ago, the big merchandising establishments were on Notre Dame Street and McGill Street. Here and there one finds successful merchants still doing business in that section of the city, but their character has changed completely. For instance, there are few, if any, hardware stores successfully handling household supplies. Thirty years ago, and less, it was possible.

It was down in this old cramped section of the metropolis that Michael Philbin began his commercial career. He served his time with Foley & Co., a wholesale hardware concern on St. Paul Street, and on the completion of his training, went into partnership with William Warmington, opening a wholesale and retail business on McGill Street, under the style of Philbin & Warmington. This business was discontinued after a number of years, Mr. Warmington leaving Montreal.

Michael Philbin had some nerve to open a store on St. Catherine Street thirty-five years ago. In these days it was about as difficult to get women to shop in upper town as it is to-day to draw them into stores of the down-town district. In fact, it was a steady battle for a period of over twenty years.

The business of the M. Philbin Hardware Co. was begun in the Queen's Block, which occupied the site where Goodwin's store now stands. This block was demolished about fifteen years ago, and the Philbin business removed across the street to the premises now occupied.

In the early days their chief line was household hardware, but the business in recent years has reached out after the tool, cutlery, electrical supplies, and paint trade. Philbin's tool displays have become one of the sights of this throbbing business thoroughfare. In recent months it has been their custom to announce what line of tools they would display the following week. Like a church or playhouse, they put out a board, saying: "Our subject next week will be 'Mechanics' Tools,' or 'We wish to draw your attention to our next week's offering entitled, "What a carpenter should know."' "

When the present store was opened, Michael Philbin had passed many milestones. He had some years before called his only son, Harry Philbin, to his aid, who in recent years has been the man behind the gun. Silent, a little retiring, Harry Philbin is, nevertheless, an exceedingly shrewd business man, and has the happy faculty of drawing capable young hardwaremen around him, and holding them. Seven of his best salesmen came to him as boys, have learned their trade with him, and three are now holding manager's positions. While the son runs the business, his father, the founder, still attends to the books, although he has exceeded the allotted span by five years.

The Westmount branch was opened eighteen years ago on Green Avenue. After four years it was moved into larger premises at 4166 St. Catherine Street. The business grew, and in the

Interior view of the new store opened by Philbin & Sons, Montreal. One of the three stores on St. Catherine Street.

following year another store was added, so that the Westmount branch extends from 4169 to 4175 on St. Catherine St. West. It will be noticed that the branch is on the same street as the parent store, although several miles separate them. That they attended to business in Westmount is attested to by the fact that in eighteen years their only opposition has been a grocery-hardware store located over a mile away, whereas in that period grocery stores have multiplied exceedingly. The significance of this fact will be realized when it is considered that Westmount is a city of about 20,000 people. An opening was seen in Westmount for a toy and fancy goods store, and when the Philbin branch was extended, half was devoted to this new line. Many of the articles carried, such as glassware, china, brass goods, etc., are not unsuited to a hardware store; these are, however, in separate stores, a passageway leading from one to the other.

The branch is in the hands of A. Bedard, a man who has been with the firm fifteen years. He began quite young at the down-town store, and after three years, a vacancy occurring at Westmount, he was placed in charge, and has remained there ever since.

The Third Store

Early this year the opportunity occurred to purchase a business located almost half-way between the parent store and the Westmount branch, at 723 St. Catherine Street W. It was considered a risky step in view of economic conditions, but as it offered a chance of tapping the centre of the west residential district of Montreal, it was taken over, remodelled, and opened in May.

One of the objects in opening this branch was to recapture business lost when the down-town store was partially destroyed by fire two years ago. When the store closed for repairs some of the firm's best customers disappeared altogether. Some continued to trade at the Westmount store, while others are now being discovered at the new branch, having been lost sight of for a long period.

Being located in a residential district, the bulk of the trade at the new branch is in household goods, although in the short time the store has been opened it is impossible accurately to gauge what class of goods can be sold. It will take some time to determine what stock to carry, and how much. Every day they are finding a demand for goods that have not been touched before, and are also learning that some lines should not be handled at all. Mr. Philbin selected Fred St. Pierre as manager for the new branch, a brother of Ernest St. Pierre, manager of the parent store. Both men have grown up in the business.

Household Business

One of the first things done when the new branch was taken over, was to set their nets to capture all the household business available. Philbins have always been firm believers in display racks. They were one of the first hardwaremen in Montreal to realize the value of the display rack as a silent salesman. They were introduced into the old store fifteen years ago, and better evidence of their success could not be found than the fact that they were copied by many other stores. It is not uncommon for a hardware merchant to ask permission to measure these racks, the inference being that they are making some like them.

A difficulty was encountered in the new branch in the unusual narrowness

MICHAEL PHILBIN,
Founder of the Philbin business.

of the building, but this very difficulty resulted in a discovery that has proved valuable. It was found necessary to cut the width of these stands down to 21 inches at the top, and to three feet at the base. They are 12 feet long.

At the old store, these display stands are four feet wide at the top, and proportionately wide at the base. It has been found that the narrow stand is much more practicable. While it does not carry as much stock, it is easier to get around, and does not crowd the store as much as the larger ones. Besides the base and the top, there are two intermediate shelves, making four selling surfaces in all. The base is raised six inches from the ground, and the total height is 42 inches. These stands, and the class of goods they carry, can be plainly seen in the accompanying photograph.

An interesting point in connection with the stands, especially those at the old store, is that clerks are not supposed to sell goods from them, but must, where possible, take stock from the shelves. That this rule is not, and cannot be lived up to, is shown by the destitute look of these racks when the rush period is at its height on Saturday night.

Samples are all replaced before the store closes at ten o'clock, and this is done during business hours. Two clerks are responsible for this, and they have a system which enables them quickly to make a list of missing articles, and to replace them from the reserve stock with expedition.

Incidentally, these racks are made on the premises. A stand for displaying lawn mowers in sufficiently small space to allow them to stand at the door was made at home. By the use of carpenters' tools, a hardwareman is often able to put into practice ideas for showing goods that could not easily be made elsewhere. At least, it gives an opportunity for testing ideas along these lines.

Apart from these display tables, the most striking thing in this new store is the way they display tools. The store being narrow, it was impossible to use folding doors. Instead, the wall, at the right of the entrance, from the ground up to a height of 4½ feet, has been covered with good stiff green burlap, and the stock of tools displayed here. It is very effective.

A good-sized stock of hammers and axes is kept in this manner on long nails. They give no trouble, and are never untidy. Ordinary square hooks are used for carrying heavy tools, such as ripping bars, crowbars, monkey and Stillson wrenches. Vises and jacks are carried on the floor.

The base of the wall case, which runs from a height of 4½ ft. upward, has been arranged in several tiers for showing planes of various types. The wall case is devoted, apart from the planes, to saws and braces, which are hung on harness hooks. Incidentally, there are no doors to this case. Formerly there were doors, but they were discarded. The case takes a little longer to clean, but it is more accessible. The same is true of backs of display windows. Philbin's never had them, and it has always been possible for those passing by to look straight into the store.

Farther along, just as the wall is used for showing tools near the door, the same background is utilized for the display of brushes and mops of every description. This extensive display in a place where customers can reach easily has a marked effect on their sales of brushes.

The counter is on the other side of the store, and consists of four large well-lighted silent salesmen.

MONEY MAKING METHODS

IDEAS THAT PROGRESSIVE HARDWAREMEN HAVE ADOPTED TO BUILD UP BUSINESS

HOW HE SOLD SPOONS

A retail hardware merchant, a short time ago purchased two gross of aluminum mixing spoons. The merchant cleaned up the stock of a small jobber and paid 90c per dozen for the spoons. When the spoons arrived they were priced at 15c each. On each of the two silent salesmen near the store entrance neat displays of the spoons were made on counter mats. Each clerk had instructions to direct the attention of every customer, especially women, to the spoons, and the low price at which they were offered for sale. The usefulness of the spoons for mixing purposes, etc., was described to each prospect. In a week's time ten dozen of the spoons were sold. The scheme proved so successful that every week some article is featured in the store. The article featured is nearly always something which is sold at a popular price, from 5 cents to 25 cents. A half gross of wooden spoons were closed out in one week, a short time ago. During another week, three dozen paring knives were sold. All the lines pushed bear a good margin of profit, and clerks vie with each other to see who can make the greatest number of sales each week, of the special article offered. The merchant has found that this plan of salesmanship has not only increased sales of small goods in the store, but it has also had a tendency to make the clerks more alert when selling other lines, for instance, when selling paints the clerks try to sell brushes. When selling lawn mowers they try to sell oil cans, grass catchers, grass shears, turf edgers, etc. When selling linoleum varnish they try to sell oilcloth binding and vice versa.

MONEY MAKING METHODS

Some time ago the makers of a high-priced vacuum cleaner succeeded in placing a sample in a Canadian hardware store to see what could be done with it. The retail price was $135. This gave $35 profit to the retailer.

The manager called together his selling staff—a baker's dozen in number. With one accord they declared that it was impossible to sell a $135 vacuum cleaner. "I'll show you whether or not it is impossible," said the manager. Within three months he had, off his own bat, sold twenty of these high-priced devices, so making $700 for his employers.

His method was: he selected from among the firm's customers all those who, in his opinion, could afford and should have the cleaner. Working on this select list, working intelligently systematically and patiently, and by demonstrations, he created interest and desire and induced demand.

HARDWAREMEN ADVERTISE AT FAIR

Chatham, Ont.—Chatham hardwaremen and allied retailers made liberal use of display space in the main building at the fall fair recently held here.

For a number of years past both the Willard Hardware Company and the J. C. Wanless hardware store have put on annual exhibits.

The Wanless booth, just inside the north entrance, was lined back and ceiling with paneled beaver board decorated in different tints of flat wall finish, and was lighted with artistic drops and fixtures from their electrical department, installed by their own electricians. The foreground was occupied by an exhibit of stoves and ranges and gas heaters, all of the stoves, except one, being from the regular Wanless stock. Flags, bunting, and imitation autumn leaves were used in decorating. Demonstrations were conducted showing the uses of varnish and paint; and souvenir and advertising literature were liberally distributed Mr. Wanless reports a good number of sales resulting from this form of advertising.

The Willard store prominently featured stoves and ranges, including a line of gas ranges and heaters; and a member of the firm was on hand to explain the goods, hand out literature, and meet prospective customers. This booth was located on one entire side of the south wing.

Allison Bros., hardware dealers, were new exhibitors, but made a good showing. In the main building they displayed stoves, builders' hardware and dairy supplies, including cream separators. The cooking and heating display comprised ranges and stoves. The booth was temporarily finished, for walls and ceilings, with beaver board, decorated with wall tints. This firm also has a large implement exhibit adjoining the machinery tent, including a combination washing machine and wringer, operated by gas engine, practical demonstrations of which were given during the fair. Spreaders, plows and other implements were also shown.

The E. C. Brisco sporting goods store showed auto tires, bicycles, catchers' mitts, tennis rackets and similar lines, and was liberally adorned with the patriotic colors, red, white and blue.

Hathaway & Co., bicycle and tire dealers, had a large bicycle exhibit and a good showing of tires, auto lamps and other auto and bicycle exhibits. The exhibit was in charge of Mr. Hathaway.

That fall fair advertising has a distinct value to retailers—at least in the opinion of the Chatham merchants—was shown by the largely increased number of merchants exhibiting, and the larger aggregate of space taken; as well as by the fact that merchants who have exhibited in former years were practically all represented this year.

We are now having to live our sense of responsibility rather than talk about it, and yet in these stern days surely each of us must be conscious of a sense of responsibility in being alive at all. We are being jostled out of a programme of self-interestedness, and service in some form is the great call of the hour.

Arguments that Sell Household Goods

Montreal Dealer Makes Good Use of Literature Supplied by Manufacturers—Is Thus Able to Make Sales of Aluminum Ware and Electric Irons and Toasters When Times are Dull—Some of the Arguments the Dealer Uses

"WHAT household goods are moving?" a well-known Montreal dealer was asked. He looked along his racks, down the centre of the store, and made particular mention of aluminumware and electrical goods, especially electric toasters and irons. It might be well to mention that his store is located in a district inhabited by the wealthier Montreal residents, which probably accounts in some measure for his success in these lines. Nevertheless, it is necessary for him to push these articles for all he is worth. How he did so is told in the following words:

"It is true these are hard times, but I argue to my customers that aluminumware is one of the cheapest things on the market. Ladies, when asked to buy aluminumware, often refuse to pay the high price on the ground that their servants have a way of dropping utensils, no matter how high the price. To this I have the reply, that a good brand of aluminum will give the same service, whether dinted or not. It is no use them telling me that this ware is too expensive. I have arguments ready to show that it isn't. Of course, there is aluminum and aluminum, and if you haven't a good line, it is impossible to back up your arguments. I can honestly say, however, that I have never had a lady come back to the store and say that she was sorry she had bought aluminumware.

Landed a Big Order.

"It is customary today for aluminumware manufacturers to send out pamphlets containing arguments why aluminumware should be used. I make good use of these. If the manufacturers have gone to the expense of putting these out, I think the least we can do is to read them. They send them to the customer, too, but I am afraid many of them land in the garbage pail unread. Using arguments such as are found in this literature, I was able to make a big sale of aluminum the other day. A lady came into my store and stated that she intended to fit up her kitchen with a certain kind of enamelware. It happened that I did not carry what she wanted, and not wishing to lose such a good sale, suggested that she take aluminumware instead. It was then that I heard what other dealers must hear every day, that somebody had put it into her head that aluminumware was no good. I took her arguments one at a time.

"She had heard that it was impossible to keep aluminum clean. I replied to this that all she needed was a tin of Old Dutch. Then she said she had learned that things burned quicker in aluminum than in other utensils. I have made practical tests with this metal, and was able to give her the benefit of my experience. I have found that you can put a pint of milk on the fire in a good aluminum vessel, and allow it to simmer down to half a pint without scorching it, and milk, as everybody knows, is about as susceptible to fire as anything could be.

"Well, with arguments of this kind, I succeded in convincing her that aluminum was not as bad as it is painted, and before she left I had sold her eight dollars worth of utensils. The next day she came back and spent a further eighteen dollars to complete the kitchen outfit."

This dealer had reserved one side of a rack for displaying electrical goods, particularly toasters and electric irons. On the sale of these, he said:

"Business in some lines of electrical goods has fallen off this year, but in toasters and irons it has taken an appreciable jump. It is getting so now that a house is not complete unless it has these articles. We have got beyond the days of trying these things out. People don't take chances on them, but it's funny how few people have any idea of the cost of running an electric iron.

"I had a man come in here the other day to buy an iron. I asked him why he did not buy an electric one. It costs you less than gas or any other fuel, I told him; 'only three cents an hour in this city.' That set him thinking, and he bought one. I keep that fact in mind—that an iron burns 500 watts an hour, and electricity here costs 6c a k.w.h.

"Did you ever stop to think what a good prospect a man is for an electric iron? You are married, say, and come into this store for an iron; I suggest an electric iron. I'm salesman enough to prove that it costs less, but it is a little talk about saving his wife's energy that counts with the man. If I can show him that by paying an extra 75c he can save his wife walking to and fro many times between the ironing board and stove, he's going to mention the matter to her. He may not buy it right there, but ten to one she will be in for one later. Few men stop to think about what their wives do in the kitchen, but as soon as their attention is directed to the matter, they are interested.

"A little talk about the different toast made by electricity compared with gas, showing how the electric toaster can be placed on the table and made as required instead of allowing it to become dry, will eventually sell one of these popular electrical specialties. There should be a better demand with the approach of winter for electrical bed warmers.

Showing how household utensils are displayed in the Hudson Bay Co.'s store at Calgary, Alta.

Success in Selling Household Hardware

Seventy-Five Per Cent. of Consumer's Hardware Co. Customers are Women—Pricing Goods at Odd Figures—How Goods are Displayed

SEVENTY-FIVE per cent. of the customers who patronize this store are women, stated G. W. Mahon, manager, Consumers Hardware Co., Toronto. That is why we carry so many lines of household hardware.

Household hardware draws women's trade. Have you ever visited the hardware department in the large department stores? Women customers predominate in all circles of the department, with the exception, perhaps, of the tool section. One reason why the department stores secure such a large share of women's trade is, that a well-selected assortment is always carried in stock, is well displayed and is priced in plain figures. We follow the plan of the department stores on a smaller scale.

There are no lines that pay better profits than the many line of household hardware, kitchen utensils and home appliances, for which there is a ready sale and an increasing demand. The locality where our store is located is frequented largely by residents in nearby residential sections. Most of the purchasing is done by the lady of the house.

We have found that the average woman likes to deal at a store where there is a good stock, and where all the latest and most up-to-date household appliances are on display. We try to extend the utmost attention to every customer, whether she be a purchaser of a ten-cent wire toaster or a high priced case of cutlery. Courteous treatment of women customers is one of the best trade-pullers I know of. Price is also a consideration with women customers. They follow prices much more closely than the men. In order to be able to sell right, it is necessary to keep in close touch with the various sources of supply. There is a big difference in the prices quoted by various wholesalers and manufacturers on housefurnishing hardware, and by careful attention to buying a merchant can very often pick up excellent selling lines at exceedingly reasonable prices.

We have also found that it is a good plan to mark household hardware lines in odd figures—the same plan as the department stores follow out.

One of the accompanying cuts shows a large handbill of a type which are frequently distributed in the residential sections of this part of the city. You will note that there are many illustrations shown, and that in a great many cases the prices are quoted in odd figures.

The constant and heavy campaigns of the department stores have obsessed most women with the idea that bargain prices are always quoted in odd figures. Department stores will frequently clear out hundreds of dozens of an article when it is advertised at 98c, while the same article is only a moderate selling line in hardware stores all over the city at $1. A great many women are influenced by odd-figure prices. Transient trade is always a big item in city stores and through the medium of the show window the Consumers Hardware Co. secures considerable trade.

On entering the store the visitor is impressed by the splendid use which has been made of the space available for display purposes. The store is not a large one, and yet there appears to be a vast amount of hardware, particularly household hardware, on display within easy reach of customers. This has been made possible by using display stands which are placed in the centre aisle of the store. One of the first stands the customer encounters on entering the store is one containing such lines as basting spoons, pot scrapers, paring knives, pot forks, wire

Reproduction of large handbill featuring household hardware lines. This style of hand-bill is used by the Consumers Hardware Co., Toronto, for distribution in residential districts. Note the range of housefurnishings featured.

View in the Consumers' Hardware Co. store, Yonge street, Toronto. Note display of household hardware.

goods, and many other small articles used in the kitchen.

A great many customers after examining goods on the first display fixture pass on to the next, and so on down the line, until they have inspected many of the lines on display. Home needs, which might otherwise be unthought of by the customer, are suggested to the customer in this way, and many sales are made as a result. Just at the present time and during the fall, is an excellent time of the year to push household hardware. Department stores and variety stores push these lines more than usual at this time of the year—so do a great many hardwaremen.

Incidentally, when you get the lady of the house visiting your store to buy household goods, you can rest assured that before long the husband will also be a customer, buying tools, fishing tackle, hunters' supplies, auto accessories or any one of a dozen other lines which are needed by the average man.

October in the Paint Department

October Ushers in the Home-Decorating Season—Some of the Good Selling Lines During Fall—How One Merchant Displays Goods

DURING the month of October, probably more than in any other month the householder is interested in making the home interior, attractive and inviting, in anticipation of the indoor season that is rapidly approaching. In a short time the outdoor season will be practically over, and a great deal of time will be spent in the home.

At the present time there are many window displays, and newspaper advertisements appearing in various parts of Canada, featuring paints for the householder. Retailers in many towns and cities are actively engaged in pushing the sales of the many splendid paint specialties which are needed at this season of the year.

October is a splendid month for interior or exterior painting.

Paint manufacturers, who have studied the needs of householders, have issued attractive booklets, circulars, etc., to show how dull interiors may be brightened up at reasonable cost by applying paint preparations.

In these booklets you will find practical suggestions for suitable finishes to be used for home decorating. The suggestions offered are generally many and varied, and, as they give advice regarding the application of finishes for painting and decorating floors, woodwork, walls, furniture, radiators, etc., they are interesting to almost every person who takes pride in the interior appearance of the home.

The average householder is often confronted with problems such as: "How can I make the floors attractive?" or "What would be the best finish for the walls?" These problems, while often perplexing to the householder, can be easily explained by the merchant who carries a suitable stock, and who makes a study of the lines suitable for inside work.

The month of October is an ideal time to paint indoors, and to do decorative work that will give a warm, cheery atmosphere to the rooms in the home.

Window displays, newspaper advertising and the judicious use of advertising matter, featuring finishes for inside use should be productive of a large amount of fall business. Salesmen should be equipped with a thorough knowledge regarding the many uses of interior finishes.

The average paint customer on entering a hardware or paint store is undecided as to the material or colors to purchase, and the nature and amount of the sale depends to a large extent on the ability of the salesman.

Paint salesmen should always remember that "adaptability to requirement" is an important essential which must be considered when advising paint purchasers as to the best material for them to purchase.

A large amount of profitable fall trade can be secured by going after the fall paint business. A little aggressiveness and enthusiasm on the part of the merchant will help to work up some nice sales of interior finishes.

Among the finishes which can be seasonably featured are enamels for beds, furniture, baths, moldings, willowware, baby carriages, etc., also floor varnishes and paints for floors and stairs.

Varnish stain for chairs, furniture, woodwork and dozens of other uses on articles found in the home. Carriage paint can be sold to owners of cutters, sleighs, etc.

Special finishes for walls can be made excellent sellers if they are featured properly at this season. A number of retail firms this season are giving demonstrations showing how wall colors can be applied.

Floor wax, furniture polish, oil stain, linoleum varnish and many other specialties carried in the paint department are excellent lines to feature in connection with the late fall trade.

One merchant who does a large paint trade during the fall and winter has a display stand about five feet in height. This stand has five shelves and occupies a prominent position near the entrance to the store. Sample cans are displayed of all paints suitable for fall and winter trade. Polishes are also displayed. The merchant states that large numbers of sales are made from the display.

Customers will very often approach the display stand and examine the packages. This move on the part of the customer gives the clerks an opportunity to explain the uses of the lines displayed, with the result that sales frequently occur in this manner.

Selling Hardware in Residential District

How a Toronto Hardware Merchant Keeps His Name Before the Public in a Residential District Where Household Hardware is Required Mostly —Distributes Circulars Occasionally

OUT in the York Loan district of Toronto—a residential district of considerable size, there is a hardware merchant, G. H. Wall. Mr. Wall's store is located at 305 Roncesvalles avenue.

A merchant thus situated, in a city of over one-half million population, has many things to contend with, that do not confront the hardware merchant in the smaller cities and towns.

In the smaller cities and towns, the newspaper is one of the best publicity mediums—and its services can, as a rule, be secured at very reasonable cost. Not so, however, in the large city. Advertising rates are very high, and unless a merchant is located in a central part of the city and has a good sized business, the cost of using the newspapers is almost prohibitive.

Knowing that Mr. Wall did not use the daily newspapers the writer asked him how he kept his name before the public. It might be stated here that on account of the store being located in a residential section the lines sold are principally household hardware.

There is nothing unusual about the methods used by Mr. Wall. Just steady plugging, with a fixed purpose to keep the people from sending down to the department stores in the city for their requirements. For instance, every spring and fall, Mr. Wall has printed about 5,000 dodgers or hand bills, which are distributed thoroughly from house to house in the locality. Seasonable lines are featured on one side and paint is featured exclusively on the reverse side. "This form of publicity," stated Mr. Wall, "has worked wonders, noticeable, perhaps, more in the paint department than any other department in the store." The consumption of paint in a residential district is really surprising, and by saying that the consumption is large I do not mean that the individual sales are always larger, for often they are not. Building operations during the past year have not been very good, resulting in a serious decline in the sale of paints in large quantities, but the number of people who are retouching and refinishing painted surfaces around their houses are to be found in large numbers.

Style of hand bill distributed by G. H. Wall in residential district.

During the spring and fall I link up my windows, with the advertising done in the form of dodgers. Five months out of twelve I display paint in one of my show windows. During mid-summer and mid-winter I display paint at least once a month, sometimes oftener, and to say that results are satisfactory is putting it very mildly. "I do not know," said Mr. Wall, "of anything I could do to increase the sale of paints, stains, polishes, etc., more than they are at the present time, other than displaying in the windows regularly: "I think," he continued, "that some merchants do not realize the full value of their show windows in regard to selling paint."

In addition to using the show windows, and changing them regularly, Mr. Wall uses stickers in large numbers. Bright red stickers similar to the one shown in the accompanying illustration are attached to all packages of paint, varnish, stain, polish, floor wax, etc.

On each sticker there appears the street address and phone number of Wall's Hardware. Mr. Wall can cite many cases, where business has been secured as a result of the stickers being applied to cans, bottles, etc., which have been sent out from the store.

Take for instance a lady who intends to wax or varnish her floors and finds that the can is empty. She sees the sticker bearing the street address, and phone number of Wall's Hardware, and immediately phones in her order.

Another practical advertising stunt used by Mr. Wall is that of labeling all containers of linseed oil, gasoline, turpentine, etc. A reproduction of one of the stickers is shown in one of the accompanying illustrations.

The cost of the stickers is very small, and every day events occur demonstrating that repeat business has been secured through the use of stickers.

Another method used to keep the store name before the public is the use of advertising matter supplied by paint manufacturers. In all orders sent out, advertising in the form of a paint booklet or pamphlet featuring some paint line, is enclosed in the parcel. The name and street address with the phone number

Interior view in the hardware store of G. H. Wall, 305 Roncesvalles Avenue, Toronto.

appear on all advertising matter of this kind.

Mr. Wall attributes much of the success he has had in selling paint to the fact that he tries to maintain a standard in his paint department, both in quality and range of goods carried. An extensive range of household paint specialties is carried in the paint department, including lines such as floor wax, furniture polishes, stove polishes, stove pipe varnish, silver polishes, metal polishes, etc.

Reproduction of the styles of bags, stickers, and labels used by G. H. Wall, 305 Roncesvalles Ave., Toronto

In one of the accompanying illustrations are shown reproductions of two styles of bags used by Mr. Wall. The bags vary in size to meet varied requirements. The small bag, shown in the illustration is used for parceling up screws, hooks and eyes, etc.

It will be noted that the following lines are especially mentioned on the bags: housefurnishings, polishes, floor waxes, pocket and table cutlery, tools, etc.

RETAILERS ARE FORGING AHEAD

(Continued from page 35.)

lines, the sale of which was to a great extent neglected a few years ago.

It is true that mail order houses and department stores are working hard for business, and are getting a fair share of it, too ,but they have to fight for it. The road of the mail order house to-day is harder to travel than it was five years ago, and it is becoming still harder as time goes on, and the ever alert retailers adopt new methods to fight mail order competition. The retailers in this country are not slipping backward, they are moving forward at a rapid pace, and they are the big force that has to be reckoned with in the distribution of merchandise. The few merchants — the small minority—who are finding it hard to get along should analyse their businesses, their staffs; in fact, everything connected with their stores, and find out what is hindering them. They should not take it for granted that the retail trade is going to the bow-wows, simply because some writer has an idea that such is the case. The retail hardware trade in Canada is forging ahead, and will continue to do so. And the progressive retailers will continue to study the needs of the public, and to stock such lines as are produced from time to time to meet the requirements of their customers.

Every day at 5 p.m. in war time, the whole of the fighting mechanism of a British warship is tested and got ready for the night.

A JOKER IN ADVERTISING

An advertising writer in the Montreal Gazette, appealing to the merchant readers of that paper to put an honest meaning into their ads. has the following to say:—

"For a number of days the writer had passed a local merchant's window wherein was displayed a number of electric light bulbs, and a sign advertising 25, 40, or 60 Watt lamps at twenty five cents each. The display held several clear bulbs and an equal number of frosted ones.

"Finding the need of bulbs, I stepped into this store one morning and ordered four 40-watt lamps (frosted) and two 60-watt lamps (clear). Before I had an opportunity to pay the bill the clerk informed me that the frosted lamps cost fifty cents each and not twenty-five cents. I remonstrated with him that the sign in the window clearly stated they were twenty-five cents. 'Oh,' he said, 'if you go out in front of the window, you'll see a little sign under the frosted bulbs, which says they cost fifty cents each.'

"There was the joker in his advertising, and needless to say I bought no bulbs or anything else from that merchant.

"Advertising reflects the policies and practices of the merchant. It is a projection into print of the advertiser's working policies and of his practices as well as his goods. The reader draws a mental picture of the advertiser's personality from his advertising matter. The reader instinctively knows the kind of goods the advertiser sells, the kind of trade he has and the kind of service he renders his patrons. These things are read between the lines of his printed matter.

"Advertising that does not do all these things in the reader's mind is riding to a fall. Dishonest advertising is an invention—but never a true projection.

"There are, nevertheless, times when an honest advertiser fails. That is not the fault of advertising, but rather the fault of the interpreter—the one who writes the advertisement. That is why ad. writing is now generally recognized as a profession. Good ad. writers are good interpreters as well as good salesmen.

"It is very important that a merchant who is sincere should determine his relation as such to the community and then with great care reflect that relation in his advertising.

"Write your advertising as you would a promissory note. Make it have just one meaning and that meaning an honest one. Look over your advertising matter to-day, Mr. Merchant, and see if there is a joker in it."

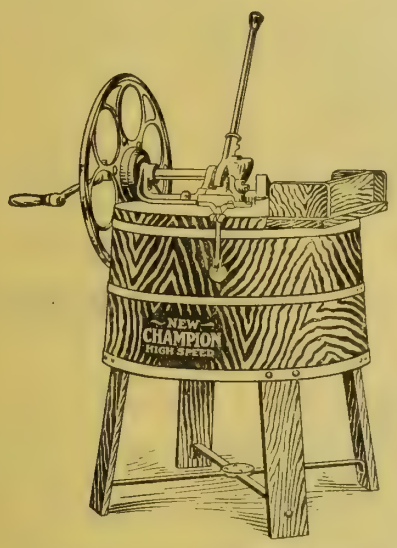
Make More Money Selling These

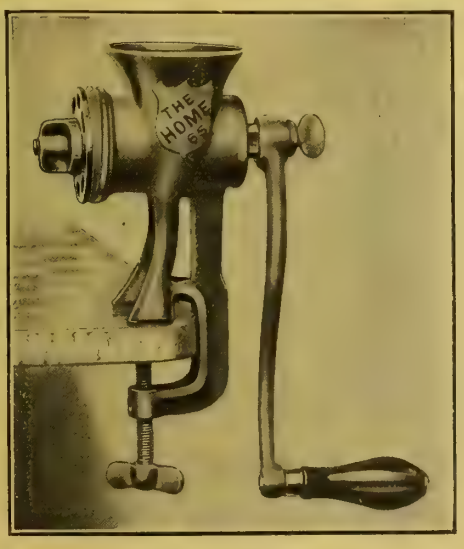
Maxwell

Lines. Well Made—Well Known and Well Advertised

HERE ARE THREE MAXWELL LINES
GREATLY IN DEMAND JUST NOW.



HIGH-SPEED CHAMPION WASHER
A perfect and complete washer which almost runs by itself. It has a lever at top, also crank handle at side, both equally easy to use. Not a better washer on the market than this.



HOME 65 FOOD CHOPPER
One of the best selling lines you ever handled. A new machine made in standard family size, much stronger than the ordinary type of machine, embodying all the latest principles. Cap fits close, rendering the machine quite watertight. Supplied with different cutting plates.

Maxwell lines are well known and well advertised. Everywhere the demand is growing continually and you will find any of these Maxwell lines quick sellers and good profit-getters---simply because they are what the people want.

WISS
SCISSORS

WHEN you talk "Quality" you talk "Profit." Wiss is the world's word for quality in Scissors and Shears.

You can make good profits by putting in a line of Wiss Scissors and Shears. The demand for them in America is far greater than for any other high-grade brand—ample and convincing proof that Wiss Scissors and Shears stand first in quality and reliability in the minds of all users.

And not only that—Wiss Shears are in demand in all points of the world—East to West—even in Sheffield their supremacy is recognized.

Not only do we make extensive lines of Shears and Tinner Snips, but to-day we are making under one roof complete lines of Scissors for every conceivable use. These Scissors are of exceptional quality—all forged of Crucible Steel, correctly tempered and beautifully finished.

A request will put you in touch with our Canadian Representative. Write to us for particulars and catalogues.

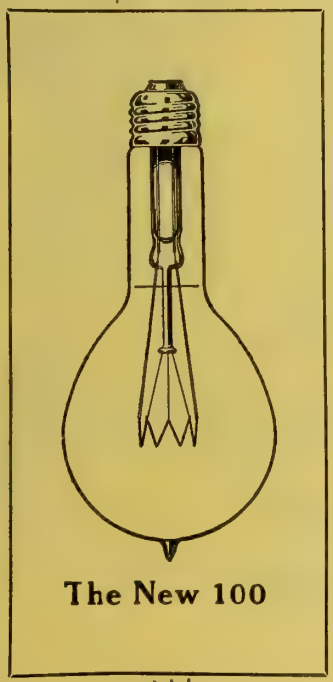
A New Store Lamp



THE new 100-watt *Mazda C* Lamp is your present opportunity. It is essentially a store lighting lamp—for display windows and interiors. Its whiter light will bring out all the attractive points of the merchant's wares. The concentrated light source makes the re-direction and maximum utilization of light certain.

That's the lamp. The field is all around you; stores—display windows and interiors.

Your strongest, most convincing talking point is the lamp itself.

Light your own windows first. *Demonstrate the lamp itself to your prospect.* Sell one merchant lamps for his window to-day and you'll sell his neighbors to-morrow.

A Clean, Safe and Economical Gas Lamp

We have a handsome proposition for wholesale and retail selling agents.

Write to-day for particulars.

The Wells Patent Self-Generating Acetylene Lamp gives a pure, soft white light, free from smoke or smell. Burns from 5 to 8 hours on one charge, and is particularly suitable for farmhouses or places far removed from city gas supplies.

The Lamp is easy to operate and clean; is more economic than oil, and has a very attractive appearance.

Household Utilities Manufacturing Co.
Room 215, Dominion Savings Building
LONDON, CANADA

A Snappy Seller!

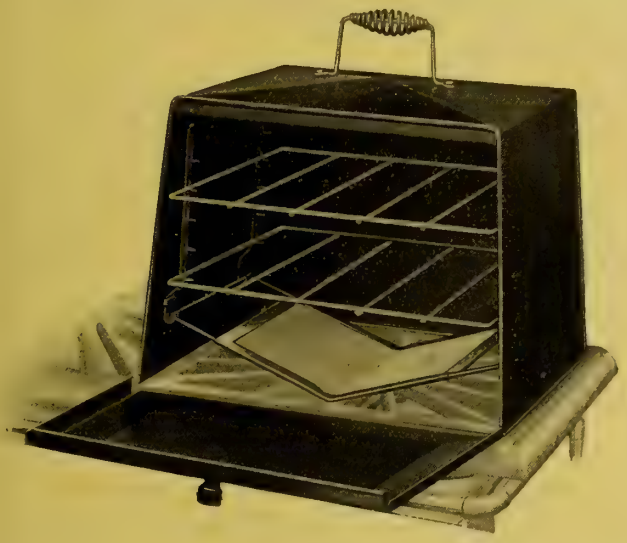
The Kitchen Kumfort Oven

Heats quickly, so that the baking is partly done by the time it would take to heat up the gas stove oven.

IT IS A GAS SAVER, because food will bake in the same time on a 20 ft. burner on top of the stove as in the gas stove oven in which a 40 ft. burner is used, and if gas costs $1.00 per 1,000 feet, this means a saving of 2 cents per hour; not much saving in one hour perhaps, but in a month, well worth saving. In addition to this, **there is the saving of expense of heating the large oven to the baking point.**

It will bake Potatoes, Biscuits, Pies, Meats, in fact, anything that can be baked in any oven can be baked in the Kitchen Kumfort.

Can be used to equal advantage on coal oil stoves.



Size, 12 in. x 13 in. x 10 in. high, made of full finished Wellsville steel, fitted with two re-tinned adjustable shelves and an asbestos-lined heat deflector.

Six occupy about the same space as two ordinary square ovens of the same size. This means not only **less room taken in your store,** but lower freight rates and less weight, because less packing material is needed. Your first cost is no more and **your transportation charges are very much reduced.**

The ovens are packed one-half dozen in a corrugated shipping case and not in a wood box, as shown in the illustration.

Write us for prices to-day.

The Most Information
The Most Entertainment
—and All Made-in-Canada

Here are a few of the features which make the October issue of MacLean's the best number yet put out by this aggressive magazine.

"The Woman Question," by *Stephen Leacock,* an article that presents a new viewpoint on a vexed question. It is presented in the virile, readable style of Canada's great humorist.

"Canada's Opportunity," by *Agnes C. Laut,* a powerful article on financial and trade conditions arising out of the war.

"Tryst," by *Alan Sullivan,* a short story that for sheer perfection of style equals anything that Mr. Sullivan has ever done.

"The Wicked Partner," by *H. F. Gadsby,* a light sketch of the Hon. Robert Rogers, written not from the political but from the human side.

"The Years of the Wicked," by *Hopkins Moorhouse,* a short story that is different from anything you have ever read before—one of the best things yet turned out by this rising young author.

"The New British Columbia," by *Norman Lambert,* an article on the Northern part of the mountain province which for vivid descriptive power has never been excelled. This is illustrated by a series of remarkably beautiful photographs of the Rockies.

"The Next Man Up," by *W. A. Craick,* an article on the men who are second in command of the big corporations of Canada. It gives an inside picture of the workings of some of the big railways and banks.

There are nine other stories and articles, all of a high order, and *our Review of Reviews Department, which contains condensed versions of the best articles which appeared during the previous month in the magazines of the world. This is one of the biggest features of MacLean's Magazine and is in itself of such value that you need MacLean's for this department alone. There are twenty articles in the October issue carefully selected as the most informative and interesting published the world over.*

Special Offer—To new subscribers only. In order to introduce MacLean's Magazine into homes where it is not now read, we are giving the magazine for eighteen months for price of twelve—see coupon below.

A Special Offer to You.

MacLean Publishing Co., Ltd.
Dear Sirs:
Enter me as a subscriber to MacLean's Magazine for eighteen months, starting with your October number, and on receipt of invoice I will remit $2.00.

MACLEAN'S MAGAZINE

THE MACLEAN PUBLISHING CO. LIMITED

143-153 University Avenue . - Toronto, Ontario

Events in the Trade

Readers are requested to send in, for publication on this page, news items of interest to the trade.

Ontario Incorporations

Canadian Cartridge Co., Ltd., capitalized at $400,000, head office Toronto, to manufacture brass, bronze, iron, steel, etc., and to trade in brass and bronze cartridges, shells, etc.

Increased Capital

The Canada Malleable and Steel Range Manufacturing Co., Ltd., has been authorized to increase the capital stock of the company from the sum of two hundred and fifty thousand dollars to the sum of three hundred and fifty thousand dollars.

Howland's Honor Roll

The honor roll of employees who have left the employ of H. S. Howland, Sons & Co., wholesale hardware merchants, Toronto, to join the colors, contains the following names:—L. Tomlinson, R. Quinton, T. Moulds, G. Redman, M. Porter, G. Phillips, Wm. Hall. Luke Tomlinson and Robt. Quinton left with the first contingents, and are reported to be somewhere in France.

Opens Toronto Office

P. A. Cheevers and Company, who have been conducting business as manufacturers' agents at Windsor, Ont., have removed their office from that place and opened an office in the Tanner-Gates building, 28 Adelaide street West, Toronto. Mr. Cheevers has taken on several new lines, and now has representatives calling on the trade.

Hardwaremen Married

Amherst, N.S.—The marriage took place recently of William G. Ayer to Miss Ariel Blanche Phillips. Mr. Ayer is connected with the office staff of Dunlop Bros. & Co., wholesale and retail hardware merchants.

Lunenburg, N.S.—The marriage took place here recently of James A. Cousins to Miss Gertrude Gilfroy. Mr. Cousins is a member of the travelling staff of A. M. Bell & Co., Halifax, N.S.

Business Changes

Durham, Ont.—C. J. Furber & Co., manufacturers of weather strip, etc., have dissolved, T. G. Goodchild continuing.

Hawkesbury, Ont.—L. P. Beauline, hardware, has been succeeded by Hawkesbury Hardware Co.

Bounty, Sask.—H. H. Davidson, hardware, has added a stock of groceries.

Montmartre, Sask.— — Thos. Malhoit, hardware, has been succeeded by P. Goulet.

Obituary

St. Catharines, Ont.—The death occurred here on Sept. 27 of Hugh J. Conn, who for 23 years conducted a stove and plumbing business. At the time of his death Mr. Conn was 53 years of age.

Ottawa, Ont.—The death occurred here suddenly of James W. Powell, a representative of the Page Wire Fence Co. Mr. Powell, who was in his 51st year, was in charge of an exhibit at the exhibition, and his death was caused by the bursting of a blood vessel. Mr. Powell had been connected with the Page Wire Fence Co. for upwards of fifteen years.

Personals

C. Barker, who has been on the staff of the Union Bank at Morse, Sask., for several years, has severed his connection and joined the staff of J. J. Williams, hardware merchant, Vanguard, Sask.

Many in the hardware trade in the Province of Quebec will be pleased to learn that George Browne, who has been representing Caverhill, Learmont & Co. in that territory for the past thirty-five years, is improving nicely from his recent serious illness.

The Atlantic City Convention

The program of the twenty-first annual convention of the National Hardware Association of the United States, to be held at the Marlborough-Blenheim, Atlantic City, N.J., on October 13, 14, 15, 1915, will surpass any past programs of the association's conventions. Actual count of those who have expressed their intention of attending the convention indicates that the convention will be largely attended as usual, and that the attendance will be if anything, greater than at previous well attended conventions.

Incorporations

The incorporation of the Electric Zinc Company, with a capital of $24,000, and headquarters at Sherbrooke, Quebec, is announced from Ottawa, and may be regarded as one of the results of the Government policy of granting a bounty on Canadian produced zinc in the event of an early termination of the war suddenly reducing the present market values.

Other recent incorporations include the Castings Company of Canada, $49,000, and Heating and Engineering Company, Montreal; also the Sorel Steam Foundry Company, $100,000, Sorel, Que.

Join the Colors

Guelph, Ont.—Two members of the staff of H. Occomore & Co., C. C. Letheren and F. Anderson, have enlisted for active service. Before their departure they were the recipients of wrist watches from the company and staff.

Fredericton, N.B.—Albert McElveney of the staff of R. Chestnut & Sons, has enlisted with the 64th Battalion at Sussex. Before leaving Mr. McElveney was presented with a military wrist watch by R. Chestnut & Sons, and his fellow employees.

Winnipeg Notes

Winnipeg, Man.—A. Macfarlane, of Montreal, was in the city all last week calling on the trade. Mr. Macfarlane represents many of the largest manufacturers of hardware and cutlery in Great Britain, Canada and the United States, and is on his way through to the Coast.

Stanley C. Morse, of the Miller-Morse Hardware Co., left last Thursday morning for Montreal, and from there will go to New York and Chicago before returning home.

Walter Eaglestone, of Readlyn, Sask., has added a stock of hardware to his machinery and implement business.

N. K. Devlin has moved his general store stock from Assiniboia to Govenlock, Sask., and will carry in future a stock of hardware.

K. Litzman, of Canora, Sask., has started in the hardware business.

Trade Notes

A Glasgow firm formerly supplied with broom handles and wood rollers for towels, is now desirous of entering into negotiations with Canadian manufacturers. The firm is prepared to import

from 6 to 8 carloads a year, to pay 11s. per gross f.o.b. Atlantic port, and to take charge of the S. S. freight and other charges. The firm requires broom handles to be made from soft wood, spruce, fir, white pine or basswood. Further details regarding dimensions, etc., may be secured from the Department of Trade and Commerce, or the Editor Hardware and Metal, Toronto.

W. J. Egan, Trade Commissioner at Capetown, has forwarded the Department of Trade and Commerce information regarding the types of wheelbarrows which are popular in South Africa. Interested firms will be supplied with details upon request. Illustrations of the three more important types have been forwarded in the hope that Canadian firms who are interested in the openings in South Africa will avail themselves of the market now offering.

As a result of inquiries made by certain firms making saws and sawing machinery, some statistics regarding the market for saws in Latin America have been given out. According to the 1910 census, there were 283 sawmills in the Argentine Republic which employed a total of 8,081 persons. The value of local material used was $4,923,500. The timber cut is quebracho. Chiselled-bit or inset-ed-tooth circulars are the only saws that will successfully cut quebracho without overheating. The imports of machine saws for 1912 were 233,038 pounds. The principal countries for supply were: France, 82,507 pounds; Great Britain, 52,274 pounds; Germany, 50,899 pounds: United States, 44,100 pounds. In 1913 the total imports were 244,523 pounds, and in the first six months of 1914 they were 85,608 pounds.

CATALOGUES AND BOOKLETS

Cutlery, Butchers' Tools, Etc.

John Chatillon & Sons, New York, N.Y., have issued catalogue No. 17, attractively gotten up, featuring cutlery, butchers' tools, etc., under the brand Foster Bros. In addition to the Foster line, there are catalogued goods of a kindred nature. The catalogue is excellently illustrated. A few of the many lines featured are butcher knives of various patterns, French cook knives, kitchen knives, ham slicers, bread knives, carvers, slicer forks, paring knives, shoe knives, putty knives, wall scrapers, cheese knives, butter spades and trowels, palette knives, tenderers and masticators, fish splitters and knives, clam knives, butchers' supplies, ham tryers and stringers, steels, cleavers, ice picks, ice cutting machines, cheese and butter tryers, butchers' saws, meat choppers, sausage stuffers, domestic presses, vegetable cutters, and many other lines.

Trade Inquiries

The Department of Trade and Commerce has received the following inquiries relating to Canadian trade. Addresses may be secured from the Department, or from the Editor, Hardware and Metal, Toronto, Canada. Please quote reference number when requesting addresses.

1047. **Ironmongery.**—A British firm is open to purchase wire nails, twines and hand tools.

1049. **Automobile Accessories.** — A British firm is open to purchase large quantities of motor car and motor cycle stampings, forgings, pressings, etc., or anything connected with pleasure car, commercial lorry or motor cycle work. Prices delivered Birmingham. State time necessary to execute orders.

1051. **Ironmongers' Supplies and Agricultural Implements.**—A British firm inquires for dowels, washboards, nuts and bolts, screws, wire nails and belting. Prices delivered Liverpool. They are also open to represent a manufacturer of agricultural implements.

1053. **Ironmongery.**—An English firm is open to buy iron and brass screws for wood; also bolts and nuts and wire nails. Prices delivered Bedford, England.

1055. **Steel Wire.**—A firm in England is in a position to buy barbed wire, 6 and 7-gauge, in ten-ton lots.

1056. **Asbestos Cement.**—A firm of cement and building material factors in Manchester wishes to obtain immediate supplies from Canadian manufacturers of asbestos cement, roofing slates and building sheets.

1059. **Pulp and Asbestos.**—A French commission firm desires to get in touch with Canadian concerns who wish to sell their products in France on a commission basis.

1061. **Disinfectants, Concentrated Lime Sulphur.**—A Cape Town commission firm asks for samples and quotations on disinfectants. They are also prepared to purchase and advertise or handle on commission a brand of highly concentrated lime sulphur.

SEND IN YOUR RAZORS.

Old or spare razors are needed for the troops at the front. Large numbers have already been received but many more are needed. Hardwaremen throughout Canada are co-operating in the movement. Are you doing your bit? Hardwaremen are requested to kindly forward razors without delay to Thos. B. Lee, 30 Front St. East, Toronto.

Weekly Market Reports

Statements From Buying Centres

The Markets at a Glance

SUDDEN and far-reaching price changes in hardware and allied lines have been occurring with such frequency during the past few weeks that the trade in general looks forward to a batch of new prices each week.

This week has been no exception and some very important price changes have taken place. A further decline of 50 cents per 100 pounds has taken place in white lead. When a decline of 50 cents took place, as announced in Hardware and Metal on September 18, still lower prices were predicted. Hardware and Metal in referring to the decline at that time stated as follows: "The new basis is not by any means a strong one, and there are likely to be further declines in the future. It might be noted that the advances in white lead since the beginning of the war have been $1.50, and that to-day pig lead is little dearer than it was on August 1, 1914, except for the addition of 7½% to the duty." Offsetting the decline in white lead there is an advance in the price of linseed oil. Various firms have advanced prices from 5 to 8 cents per gallon. There has been an advance of nearly 10% in the price of black rivets. The new discount will probably be 70% as against 72% as formerly. Owing to a scarcity of certain kinds of steel an advance is expected in the price of drills. Set and cap screws will also advance in the near future. Following the advance in prices of wire products at Toronto and Montreal last week, several advances have taken place at Winnipeg this week. Bar iron, wire nails, barb wire, plain and coiled galvanized wire and fence staples have all advanced ten cents per 100 pounds; annealed wire and bale ties have advanced fifteen cents and linseed oil has advanced five cents. Western hardware jobbers report that orders are coming in more freely than had been expected and future prospects are bright. The optimistic war news, combined with the fine weather during the week has had a beneficial effect on trade generally. Stove men report that the recent cold spell started a movement in stoves, which has continued satisfactorily ever since. The metal markets are steady and practically unchanged, with very little business passing outside of the demand for metals used in making ammunition and war supplies.

Steel mills are working to full capacity. Some firms in fact have recently increased their producing capacity but are still unable to meet the demand for billets and rounds.

MONTREAL

MONTREAL, Sept. 30.—The welcome news that the Allies have taken the offensive and made good progress on the Western front has had the effect of creating a more favorable business sentiment and this is evident in the hardware trade. At the same time the weather has continued seasonably cool, which has helped the movement of fall and winter lines. Altogether the feeling is noticeably improved and there is a marked contrast to the conditions last fall, even though during the most uncertain periods since the war broke out, hardware stood the strain of general business disorganization probably better than any other trade. However, buying is largely confined to the staple lines as yet and the bulk of the business is in country goods of a substantial and practical character and, even though the good crops may bring a broadening of the demand as regards luxuries, it cannot be expected that the consumption will be normal while the war lasts, especially with the poor demand in the city. Some manufacturing lines show marked improvement, but generally speaking industrial and construction materials are quiet. The improvement in the stove business is continued.

Some further price adjustments have been made but generally speaking changes have been delayed in Montreal pending the outcome of the meeting of the Wholesalers' Association at Toronto. There is to be a big advance on steel drills and an increase in the price of set and cap screws of about 17 per cent. Iron is now generally quoted at $2.10, covering an advance of 5c which has been made gradually. Black iron rivets have been advanced about 10 per cent. General adjustments have been made on wire as announced a week ago and an additional advance of 32½c has been made on barb. Another cut of 50c on white lead, an advance of 5c to 8c on linseed oil and some increases on low quotations of 2c on turpentine are features of the paint section.

Copper has advanced a half cent and lead a quarter, but generally the metals have been steady. The strength is due to improved inquiries from the other side of the Atlantic, in which the prospects for an improvement in the exchange and the better war news are probably factors.

Tin.—Quotations on tin are unchanged but firm on an advance of nearly 1c in New York since last report. This has been the result of advances in London,

MONTREAL QUOTATIONS.

Tin	41c-42c
Spelter	19c-20c
Copper	21½c
Lead	6¼c-6¾c
Antimony	35c
Solder, ½ x ½	25c-27c
Solder "strictly"	27c-29c
Aluminum, Ingot	50c lb.
Wire Nails	$2.50 base
Cut Nails	$2.50 base
Pure Manila Rope	16c base
British Manila Rope	13½c base
African Hemp	13½c
Sisal	11¼c
Lath Yarn	10¾c

For quotations on other hardware goods see weekly report and current quotations.

where the good feeling over the war news seems to have had effect. Large American consumers do not show the least interest in the change of sentiment referred to; they have good stocks and are well brought up, while the outlook for business during the winter months is not considered at all bright.

Spelter.—The spelter situation is firm but unchanged. There have been fractional advances in New York on the strength of foreign sentiment and some better inquiries for futures. However, the opinion is expressed that the improvement on futures is due to small dealers looking for higher prices while they might maintain the market in a more healthy position by selling as the demand arises at present quotations.

Lead.—Quotations for lead are slightly firmer and the present basis of 6¼c to 6¾c covers an advance of ¼c on the top of the range. The American Trust has made no change in price, but an advance had evidently been anticipated and second-hands made an increase in their figures of 10c. However, late New York reports are to the effect that the interest has been narrow and that the attitude of large consumers would lead to the conclusion that they are well supplied.

Copper.—There is an advance of half a cent locally for copper, the new price being 21½c. This comes with a strength in New York which has resulted in fractional advances in that market. However, heavy buying which might have been expected after the Wall Street advances did not materialize. Producers are reporting that they have export, but American buyers are not taking hold with any great freedom. There is considerable interest in the "strike" in Arizona, which has recently taken on the appearance of a lock-out.

Antimony.—The figure of 35c for antimony is purely nominal. Supplies of Chinese and Japanese could probably be secured at under this figure, while for English the quotation could be fixed pretty much to his liking by the seller.

Aluminum.—The nominal quotation of 50c holds locally and supplies are very scarce at any price. New York reports that the Aluminum Company of America is quoting 31c, but as they are not in a position to make deliveries before the middle of next year, this figure has little bearing on the situation and the spot price on that market is nominally $48.50.

Solder.—There has been no further change in the solder situation following the reduction of 1c a week ago. The quotations on raw materials are comparatively steady. Half-and-half is quoted at 25c to 27c and strictly at 27c to 29c.

Galvanized Products.—Prices on all galvanized products are unaltered, and there is little to indicate an immediate change. The reductions in spelter have not had the effect which might have been expected for the reason, evidently, that manufacturers never brought their prices to the high position which might have been warranted. Sheets and plates have been somewhat unsteady for a few weeks, but a reduction appears no nearer than at that time—in fact, there was an advance on Canada plates last week as reported. So far as galvanized ware is concerned, manufacturers are taking little interest. Their stocks will last for some time at present prices, which have reduced demand considerably, and with spelter on its present basis they could not successfully make new stocks to compete with cheaper substitutes.

Lead Pipe.—Despite predictions of a decline with the lead market, lead pipe continues to hold its position. The quotation for lead pipe is 9½c and for lead waste pipe 10½c. Lead sheets are also unchanged, as follows:

Sheets, 3-lb. sq. ft.	$8.25
Sheets, 3½-lb sq. ft.	8.00
Sheets, 4 to 6 lbs. sq. ft.	7.75

Cut sheets, ½c per lb. extra.

Cut sheets to size, ¾c per lb. extra.

Iron and Steel.—Iron and steel are very firm and for the former the price of $2.10 is now general, with 5c off on large quantities. The consumption of steel for munitions of war has unsettled the trade to a large extent and in many branches the output is at capacity.

Wire.–The advances on wire referred to in last report have gone into effect and the market is steady on the increases in sympathy with the American situation. Smooth steel wire was advanced 15c to a base of $2.60. Hay wire in coils was advanced 15c, No. 12 now being $3.20 with 10c added for No. 13, 15c for No. 13½, 25c for No. 14, and 45c for No. 15. Cut hay wire was advanced 15 per cent. reducing the discount to 10 per cent. Bright and galvanized staples were advanced 10c per 100 lbs. There were also advances of 5c on wire cloth and 10c on heavy straightened wire and bed rods.

Barb Wire.—Following the changes in wire referred to, there has been an important advance on barb wire. The price is now $3.47½c as compared with $3.15, being an increase of 32½c.

Black Rivets.—There has been s change on the price of black rivets covering an advance of nearly 10 per cent. The old discount was 72½ per cent. off, and the new will probably be 70 per cent. off.

Drills.—Owing to a scarcity of certain kinds of steel, and attendant difficulties in getting deliveries, it has been announced that there will be an important advance in the price of steel drills. Definite information is not available at writing.

Set and Cap-screws.—In the quotation on set and cap-screws there will also be a big advance. It is expected that this increase will be about 17 per cent. Higher cost of raw materials is the explanation given.

Screws and Nails.—The market for screws is unchanged and very firm. Dealers state that they are at a loss to understand why advances in prices have not been made in sympathy with the American market; they have been looking for increases for some time. There is continued difficulty in getting delivery of certain varieties of screws required for ammunition boxes. The movement for nails is small; quotations are $2.50 for both wire and cut.

Rope.—Demand for rope is reported as being quiet, but this is a seasonable state of the market. Quotations are unchanged as follows:

Pure Manila Rope	16c base
British Manila Rope	13½c base
African Hemp	13½c
Sisal	11¼c
Lath Yarn	10¾c

Mechanics' Tools.—The business in mechanics' tools continues very satisfactory and as yet there is no indication of the demand falling off for those lines which are going into the hands of makers of munitions of war. Carpenters' tools are practically dead.

Sheet Zinc.—There is no change in the zinc market at 25c. The uneasiness which might have been expected with the decline in spelter seems to be deferred owing to it being impossible to get prices on futures. This prevents dealers from gauging the outlook and adjusting their quotations.

Arms and Ammunition.—The splendid demand for ammunition both for guns and rifles continues, although some of the sporting metallics are still scarce. The trade is somewhat confused over the new Winchester quotations, the discount locally being set at 7½ off and in Toronto at 5-5 per cent. off. An adjustment is expected shortly.

Brass Jack Chain.—On the recent advances in the price of brass jack chain, there has been a noticeable falling off in the demand, and it is feared that the increase, which will necessitate a change in the resale price, may affect the sale during the pre-holiday season when it is usually in strong demand throughout the province.

Carriage Heaters.—The movement of carriage heaters has commenced with the cooler weather. The indications are that there will be a good trade in this line this season. These heaters are coming into general use for automobiles and should be handled aggressively in the auto accessories department.

Skates.—Deliveries of skates are com-

mencing. ith German competition practically eliminated, the Canadian makers have risen to the occasion and, with new designs and new prices, are making what promises to be a successful effort to confine the business largely to Canadian products.

Other Seasonable Lines.—Other cold-weather lines moving are weather strip—for which there is a good demand—sleigh bells, snow shovels, hockey sticks, blankets, lanterns, stable equipment, etc. There is also a fairly good trade in glass of the smaller window sizes for repair work, and with it a call for putty and glaziers' points.

Stoves and Furnaces.—Manufacturers of stoves and furnaces report that the active fall trade is continuing and the improvement over a year ago is marked. The outlook for a fairly busy season is considered good. This movement applies to heaters of all kinds and furnaces. Stoves at lower price seem to have the favor but the range is fairly good. The bulk of the business is to country districts, but the city trade is also showing up better.

TORONTO

TORONTO, Ont., Sept. 30. — A number of important price changes have taken place this week, including a decline in the price of white lead; an advance of 7 cents in linseed oil; an advance of 10 per cent. in iron rivets. Poultry netting is now being quoted for spring delivery at 45 per cent. A further advance in the price of shotguns and rifles is predicted. The recent improvement in the stove trade continues and retailers report a very good movement in fall heating equipment. All wire products are very firm. High-speed tool steel has reached a high price level and is very scarce.

The metal markets remain unchanged and fairly steady, with the exception of solder, which has declined 1 cent per pound locally. Country trade continues to improve. Staple lines are in good demand and greater interest is being exhibited in lines required for the coming winter.

The fine weather and the good war news of the past few days have had a beneficial effect on business generally.

Toronto, Ont., Sept. 28.—The remarkable development in the export trade of Canada is shown in the returns recently issued by the Department of Trade and Commerce. In August alone the export of manufactured goods reached a total of over two million dollars, practically double that of the corresponding month last year. This heavy increase is largely attributable to the heavy output of war munitions. The returns of the export trade for the five months of the present fiscal year show a total of over two hundred million dollars, representing an increase of fifty million dollars. The value of imported goods shows a falling off of about four million dollars.

While the above condition is distinctly beneficial to the Dominion, the full effect has not yet begun to be felt. The domestic trade is still comparatively quiet, although a more optimistic spirit prevails in business circles. There is, generally speaking, a feeling of returning confidence, due to the large crops and encouraging trade returns.

The steel trade continues very active, due to the heavy demand for steel for munitions. The outlook in the trade was never better. The demand for machine tools has fallen off, on account of there being no new orders for shells placed recently. It is, however, confidently expected that there will be a revival of business at no distant date. There is little of interest to note this week in the metal markets. The trade is awaiting developments in the sterling exchange situation. The scarcity of aluminum is becoming more pronounced and prices have made a sharp advance. Apart from this the markets are steady.

Steel Market

The market is very firm, and the mills continue to do big business. The demand for steel for munitions is so great that Canadian firms have been obliged to import billets and steel rounds from the States, notwithstanding the fact that some of these concerns have recently increased their producing capacity. Prices are holding very firm, and an advance in bars may be announced at any time. The demand for steel, other than for shells, and export trade, is light.

The high-speed tool steel situation continues to cause considerable anxiety to consumers owing to scarcity and advancing prices. Stocks are getting lower, and the demand is becoming heavier.

Heavy export business is becoming a more dominant factor in the steel trade in the States than at any time since the beginning of the war. Large orders for bars for shells are being placed and deliveries are running into next year, being practically unobtainable this year. Prices are very firm, and the market generally has an upward tendency. There is a big demand for billets, and prices are naturally advancing. Bessemer and open-hearth billets have advanced again, and are being quoted at $24.50 and $25 respectively.

Pig Iron

There is practically no improvement in the foundry pig iron situation, and foundries are moving cautiously in buying for future requirements. Prices have advanced and Hamilton and Victoria brands are being quoted at $20.50 per ton.

Machine Tools

The demand for new tools has fallen off considerably, due to the lack of new shell orders, and also the difficulty of obtaining new machinery. Makers are in a sold-up condition, and deliveries are as backward as ever. This situation has resulted in a demand for second-hand equipment, although even in this case business has fallen off to some extent. Inquiries now are principally for tools for making shell parts, and quite a number of second-hand tools have been sold recently for making that part of a shell called a "Gaines."

Supplies

Business continues good and prices firm. Prices of high-speed steel cutters of all descriptions have been withdrawn on account of the difficulty in obtaining raw material. Boiler and structural rivets, ¾ in. and larger, have been advanced from $3.25 to $3.75. Solder, half-and-half, has declined 1c, and is now quoted at 23c per pound.

Tin.—The market is firm, with an upward tendency in London. There is, however, comparatively little interest being shown in either spot or future deliveries. The market is being adversely affected by the sterling exchange situation. Local quotations are unchanged at 38-39c pound.

Copper.—The market is still awaiting the big buying movement, which showed some evidence of starting about three weeks ago. Production of copper at the present rate is believed to be in excess of consumption, and hence it is believed that buyers of the metal are better able to hold off and purchase only for immediate needs than they were a few months back, owing to the heavy demand for copper for munitions. There is every probability of an increase in consumption when the sterling exchange situation improves. Quotations for copper locally are unchanged at 19½-20c per pound.

TORONTO QUOTATIONS.

Tin	38c-39c
Copper	19½c-20c
Spelter	16½c-17½c
Lead	6¼c
Antimony	36c
Aluminum Ingot	.50c-55c
Aluminum Pattern	50c-55c
Solder, ½ x ½	23c lb.
Wire Solder	26c lb.
Wiping Solder	22c lb.
Tinker's Bar Solder	28c lb.
Solder, Wiping—	
Acme	20½c
Commercial	21½c
Easy	21c
Star Extra	24¼c
Strictly standard wiping	24¼c

Other Metals.—The general situation in other metals remains unchanged, and very little domestic business is passing. Spelter is quoted locally at 16½ to 17½c per pound; lead remains at last week's quotation of 6¼c locally; antimony remains at 36c, while aluminum is very scarce and is quoted at 50c per pound.

Poultry Netting.—Orders for poultry netting are now being booked for spring delivery at 45 per cent. off list. The former discount was 40 per cent. off.

Galvanized Sheets.—The situation on galvanized sheets has not improved during the last week. The prices quoted by some of the local jobbers are very low, while others are maintaining the price according to the present costs of supplies. Price cutting in an endeavor to get the small amount of business that is passing, is given as a reason for the unsettled state of the local markets. One jobber stated every man is out for himself. The prices shown in the current quotations are being quoted by the majority of the local jobbers.

Rifles and Shotguns.—It is rumored that rifles and shotguns are likely to advance in price again in the near future. Nothing definite can be ascertained at the present time, but it is more than probable that the advance will take place, as many lines of steel products are expected to advance very materially in the next few weeks. Steel for merchandising goods appears to be a secondary consideration for the reason that steel must be supplied to the troops in the form of munitions or arms. It is expected that a further advance in price will take place very shortly on rifles and shotguns.

Waste.—The increasing demand for raw stock for the use of the Allies for war purposes is said to have made waste prices very firm. The prices ruling on the Toronto markets at the present time are shown in the current quotations under Paints, oils, etc.

Rope.—Rope prices are firm and are being maintained generally. The amount of business being transacted locally is stated by the jobbers to be very satisfactory, although there is still room for improvement. The bulk of the orders being received are from the country trade. The following base prices are ruling on the Toronto markets:

Pure Manila .....16c base
British Manila .....13½c base
African hemp .....13½c base
Sisal .....11½c base

Binder Twine.—The sale of binder twine is dwindling down and jobbers state that the few calls now coming in are for very small shipments for harvesting corn.

Harvesting operations are practically over, thus closing one of the best season's the jobbers of binder twine have experienced for several years. Although there was an unusual demand, the trade handled the situation without any difficulty, as fairly representative stocks were carried to supply the abnormal demands.

Iron Rivets Advance.—Iron rivets are now being quoted at 70 per cent. off list as against 72½ per cent. formerly in effect.

Lantern Globes.—Adjustments in the price of lantern globes have gone into effect. Local hardware jobbers state that the short globes are gradually replacing the large, owing to the popularity of the smaller size. The following prices are quoted on the local markets:

	Per doz.
Cold Blast, short ruby	$2.00
Cold Blast, common ruby	2.00
Less 5c a dozen in 6-doz. lots	
Cold Blast Short	.60
Cold Blast	.60
Prism Globes	1.20

Stoves.—General satisfaction is expressed by local stove manufacturers on the market improvement which has been noticeable during the past week. The advent of cooler weather has increased interest in the stove business and fairly good business has been experienced by the local manufacturers. Furnaces are moving very slowly owing to the curtailment of building operations.

Nails.—Nails are firm at $2.45 base. The increased cost of wire rods on the American markets is still in effect, and it is altogether likely that this will affect the price of wire nails. Nothing definite can be ascertained at the present time, except that the price of nails will advance if the raw stock advances further.

Seasonable Lines.—Demands for seasonable supplies continue very good. Lanterns, horse blankets, cow chains, sleigh bells, carriage heaters, etc., are receiving attention from the country trade. Preparations for winter trade are being exhibited by dealers in the northern sections of the country and hockey sticks and skates are being shipped.

Tool Steel.—High-speed tool steel is being quoted at higher levels. The demand for high-speed tool steel for the manufacture of guns and ammunition for war purposes is enormous, and local jobbers have experienced considerable difficulty of late in procuring supplies. Local quotations on high-speed tool steel have reached as high as $1.75 per pound, while quotations at $1.50 per pound are also heard.

LONDON

LONDON, Sept. 29.—Statements from the local jobbers are to the effect that business generally continues to improve.

Staple lines are selling well, and the general fall lines are moving a little easier. The cool weather seems to have stimulated the trade somewhat, as the volume of business has increased considerably since the cooler weather set in.

Linseed Oil.—An advance of 3c per gallon has gone into effect on linseed oil. The firm prices which have been quoted recently are going to higher levels in sympathy with the advancing flax seed market. It is probable that the price will advance again in the near future, as continued bad weather in the West is said to be the cause of higher prices for flax seed. The new prices are as follows:

	Raw.	Boiled.
1 to 2 barrels	68c	71c per gal.
3 to 5 barrels	67c	70c „ „
6 to 9 barrels	65c	68c „ „

Turpentine.—Slight fluctuations are reported from the Savannah markets. However, the price of turpentine has not yet been affected on the local markets, although in all probability the price will be advanced here if further advances go into effect on the primary markets. The prices being quoted at the present time are as follows:

	Per Imp. gal.
1-barrel lots	64c
2 to 4-barrel lots	63c
5-gallon lots	71c

Fence Wire.—It was stated in last week's issue that an advance in the price of fence wire was sure to come, owing to the steady advances in the price of raw stock. The new prices are now out, and are being quoted at 10c per 100 lbs. over those of a week ago. Local prices are as follows:

	Per 100 lbs.
Barb	$3.20
No. 9 galvanized	2.80
No. 12 galvanized	2.95
No. 13 galvanized	3.05
No. 9 coil spring	2.85

Oil and Annealed Wire.—An advance of 15c per 100 lbs. is in effect on oil and annealed wire, and places the price on the local markets at the following:

	Per 100 lbs.
No. 10 O and A	$2.76
No. 11 O and A	2.82
No. 12 O and A	2.90

Hay Baling Wire.—The recent advance in wire prices also affects hay baling wire to the extent of 15c per 100 lbs.

Fence Staples.—The price of fence staples has again advanced 10c per keg of 100 lbs. The prices quoted locally are as follows:

	Per 100 lbs.
Galvanized in 100-lb. kegs	$3.70
Galvanized in 25-lb. boxes	3.95
Bright in 100-lb. kegs	2.85
Bright in 25-lb. boxes	3.10

Poultry Netting Staples.—New prices for galvanized poultry netting staples are being quoted as follows:

	Per 100 lbs.
100-lb. kegs	$4.68
50-lb. boxes	4.98

25-lb. boxes 5.08
10-lb. boxes 5.48

Bright poultry netting staples are quoted at 50c per 100 lbs. less than the above.

Peterborough Price List.—Copies of price list pertaining to catalogue No. 7 of the Peterborough Lock Manufacturing Co., are now in the hands of the trade. The list is subjected to a discount of 50-10 per cent. on steel and iron lines, and 50 per cent. on brass. The following goods are sold at net prices: Porcelain, jet and mineral, japanned mounted knobs, 120 per dozen set; rim locks, No. 1516, $1.30 per dozen set.

White Lead.—At the time of writing the base price for white lead is $10.10 per 100 lbs. in ton lots, and $10.40 for less than ton lots; but there is every reason to believe that a lower price will shortly go into effect. A very small amount of business is passing.

Nails.—Nails are stated by local jobbers to be very firm at the base price of $2.45. Rumor has it that a further advance is not unlikely, but nothing definite can be ascertained at the time of writing in regard to the probable advance.

Rope.—Rope prices still remain firm, and are being maintained generally on the local markets. The following prices are quoted:

Pure Manila 16c
British Manila 13½c
African hemp 13½c
Sisal 11½c

Seasonable Goods.—Movement of seasonable lines to the country trade continues good. Fall lines, such as horse blankets, lanterns, stove boards, foot warmers, etc., are receiving considerable attention from the trade of late. Guns and ammunition are moving fairly well, and sporting cartridges commencing to move. A good season is expected on these lines. Stoves and heaters are moving fairly well, and as the colder weather approaches, conditions in the stove trade will show signs of improvement.

WINNIPEG

WINNIPEG, Man., Sept. 27, 1915. —Business during the past month has certainly come up to predictions, and jobbers generally report decided increases over last year's figures. In fact, some former records may be exceeded when the final totals have been reached. This is, indeed, gratifying, and prospects for continued good business throughout the fall are splendid. The heavy rains of the past week may affect business for a short time, but with the outlook now for fine weather, orders should continue to come in freely.

There seems to be a somewhat greater freedom being exercised by some merchants with regard to booking orders for later shipment. There is no doubt in our minds but that this policy has proved the source of many dollars' profits to such merchants during the past year. Goods have been continually advancing in price, and in being protected at a low figure it means extra profit, and that is what everyone likes to show in their annual statement.

Though a big percentage of the lines of hardware have increased in price, we may expect further increases before spring, and no merchant should hesitate about booking for future delivery. Further than the price question is the one of being able to get the goods. This has been a problem in some lines, but it is a well recognized fact that booked orders are always given the preference. This means, then, that the merchant who books his orders now for spring delivery is protected on the price, and will undoubtedly get his goods. It is a good class to join, for getting your goods is far more essential even than price.

The latest dependable crop estimates indicate the harvesting of a bumper yield that beats agricultural records of the Canadian West—a yield that means millions and continued prosperity, despite financial chaos in less fortunate regions. Unseasonable June frosts in the three prairie provinces, lack of rain in some districts, and too much in others, and incidental losses through the ravages of obnoxious weeds, cut worms and gophers have been seemingly miraculously overcome by ideal ripening weather.

Western Canada's grain crop is estimated at 570,000,000 bushels. Allowing 100,000,000 millions for seed, it means there is nearly half a billion bushels of grain to market.

Facts and figures, though cold, tell the story of unprecedented yields that have opened the eyes of a wondering world. Phenomenal yields have been few. Such amazing totals are reached because of the general, even yield throughout Manitoba, Saskatchewan and Alberta. Wielders of critical pens for months predicted losses because of adverse atmospheric conditions. This barrier has been overcome. The marketing problem has been solved by conscientious co-operation of grain producers, dealers, elevator operators and railway chieftains.

Price Changes

Several price changes have taken place this week. Bar iron, wire nails, barb wire, plain and coiled galvanized wire and fence staples have all advanced 10c per 100 pounds. Annealed wire and bale ties have advanced 15c. Linseed oil advanced 5c per gallon on Wednesday, and is now quoted in barrel lots at 83c per gallon for raw linseed oil, and 86c per gallon for boiled.

The advances in the price of wire goods have followed the advances which took place in Eastern Canada last week, and were reported in the Toronto and Montreal reports in Hardware and Metal last week. Solder is now quoted at 27c in full case lots; less than case lots, 28c per pound .

WINNIPEG QUOTATIONS

Solder	29c-30c lb.
Linseed Oil, raw	83c gal.
Linseed Oil, boiled	86c gal.
Turpentine, in bbls.	75c
White Lead, ton	$11.50
Poultry Netting	50% off
Copper, plannished, per lb.	40c
Copper rivets, No. 7	41½-42
Rope, Pure Manila	17½c
Sheet Zinc	25c
Black Sheets, 10 and 12 gauge	$3.15
Apollo and Fleur de Lis	$6.00
Queen's Head	$6.25
Iron Pipe:	
Galvanized, 1 inch	$9.90
Black, 1 inch	$5.95
Paris Green:	
1-lb. pkgs. (case lots)	27½c

Glass:	Sgle.	Dble.
Up to 25 in.	$6.25	$9.00

Putty, 100 lb. drums.....$3.25

TAKING A CHANCE WITH DYNAMITE

(Continued from page 31)

Metal, Mr. Hardy stated that motor cars are becoming plentiful throughout that district, and in every second or third town there is a dealer beginning to dabble in automobile accessories.

Sells 600 Lamps Yearly

St. Bazile has electric light, and the lamp business goes to the hardware store. The sale of tungsten lamps amounts to between five and six hundred a year. Gradually a good demand for electrical specialties is growing, and while St. Bazilians are not yet toasting their bread by electricity, they are straightening out the frills in their dresses with electric irons., and when they get that far they are good prospects for other lines.

Executive ability can doubtless be cultivated by study and experience, but the man who has no natural talent in that direction, will never be a success as a foreman, superintendent or manager. Tact, or a knowledge of human nature, which enables one to treat each workman so as to bring out the best that is in him, is a very essential requirement.

Co-operators' Dividends and Taxes

Financial Times of London, Eng., Points Out An Injustice to the Retailer Who Has to Pay His Income Tax—Time Coming, it Says, When There Shall Be a Change.

DEALING with the question of Old Country co-operative associations, and the payment of an income tax on profits, the following from the Scottish Trader of Glasgow will be read with a great deal of interest:

The Financial Times is an influential Metropolitan newspaper, whose opinions command the attention of serious business men and the general public. The other day this journal published a special article under the above heading. The case of the private trader was clearly and firmly put, and the weakness of co-operative claims exposed. The Times pointed out that now that the income tax has been raised to 2s 6d in the £, with the probability of it going higher (since this was written the new budget has been brought down), some of the anomalies in the law which have hitherto been passed over with only an occasional grumble have become magnified to the extent of injustice which calls for immediate remedy.

The writer of the article says that prominent among these must be classed the curious provision which allows a co-operative society to carry on business without paying any tax upon its profits. He pointed out that that had been a standing grievance among retail traders for a long time past, but since under present conditions the exemption meant so much greater an advantage than it did when the income tax was only 1s. or 1s. 2d. in the £, it is quite time that the practice should be altered, more especially as the result would be to add a very considerable sum to the national revenue. The injustice to the private trader can easily be realized. The competition of a co-operative store started in his immediate neighborhood with its system of bonuses to its members as regular customers is a sufficiently serious matter in any case. The added handicap of having to pay a heavy tax on his profits which his rival entirely escapes creates a sense of injustice which no amount of plausible reasoning on the part of the supporters of the co-operative movement is likely to remove.

The leaders of the co-operative movement have always wished the public to believe that their dividends represent the profits of the private traders plus the additional gain accruing to them from more skilful buying. As a matter of fact, the dividends are mainly earned through taking an enhanced profit on articles which really do not attract attention. It is easy, for example, to sell a tea at 1s. 6d. for 2s. the lb. without being found out by the majority of the store customers. It is nonsense to talk of the stores being able to buy butter better than private traders. Human nature is not built in that way. The private traders have their own capital to look after, their whole fortune depends on the skill and success with which they conduct their business, while the buying for the stores is done by hirelings guided perhaps by an amateur committee with "bees in their bonnets." The private traders buy in the open market wherever the best and cheapest goods are to be got, and are not like the retail co-operative societies, bound to a wholesale co-operative society that can practically charge pretty much what price it likes.

It is true that some of the co-operative societies have an apparent advantage over the private traders in one respect, in that they can squeeze the wages of their workmen down to the lowest limit, as efficient service does not seem so important when the customers are bound to the establishment by the magic chain of the dividend. This, however, is in the long run a disadvantage, as cheap service is always inferior, and thus proves the more costly in the end. We recognize that the so-called co-operative movement of the present day is a fairly lucrative arrangement for the managers of the principal departments in some of the larger stores. They are at times paid as good salaries as they would get for performing similar duties in ordinary commercial establishments of equal magnitude, but there is frequently no end of grumbling among the shareholders about this. The lines of the committee men are sometimes cast in pleasant places, but as a rule the ordinary hands employed by co-operatives are poorer paid and harder worked than in private establishments.

Moreover, the public are less efficiently served, and if the law of the survival of the fittest is to prevail the final triumph of the private traders is on philosophical principles inevitable. "Each for all, and all for each," is a bit of proverbial wisdom that should have no place in the gospel of co-operation.

The Financial Times article is clear proof that the co-operative movement is being watched, and that at no distant date it must bear its full share of the national burdens. If the "divi" is seriously assailed it will mean a great deal to the movement in the times that are coming.

A very seasonable display of paint and builders' hardware in one of the show windows of the Kent, Garvin & Co., store, Hamilton, Ont. Manufacturers' helps have been used in arranging the paint display.

BOECKH'S BRUSHES

Made in Canada for Sixty Years

In 1856 they were first introduced upon the then limited Canadian market.

When you sell a Boeckh Brush to-day you are selling one that is backed by years of practical experience and careful study by experts who have devoted special attention to the requirements of this country—and who have produced designs that are perfect working tools, which in point of quality and elasticity are "head and shoulders" above any other make.

Boeckh's Brushes are set in BEX-O-LAC—the brush setting which contains absolutely no rubber, and is therefore not affected by atmospheric changes, hot water, oils, benzine, etc.

PRACTICAL PAINTERS PREFER BOECKH'S.

The Boeckh Bros. Company, Limited

TORONTO, CANADA

Price doesn't always Indicate Quality

You can pay more than

JAMIESON'S PURE PREPARED PAINT Costs

but you cannot get better paint

We don't claim that ours is the only good paint on the market, but we do guarantee it, and it sells at a moderate price.

Give us an opportunity to place our proposition for you. You've nothing to lose and much to gain.

WEEKLY PAINT MARKETS

(Continued from page 74.)

be noted that the advances in white lead since the beginning of the war have been $1.50, and that to-day pig lead is little dearer than it was on 1st of August last, except for the addition of 7½ per cent. to the duty."

Linseed Oil.—An advance of 7c per gallon in the price of linseed oil has taken place during the past week. The general rule of supply and demand does not apply in the least to this last increase. Local jobbers state that the flax seed market is in a very bad conditione and that the amount of flax seed being harvested is far below the estimates that were given some time ago. Inclement weather and repeated frosts are said to be the chief factors in boosting the flax seed market, and in sympathy with the high levels which have been attained in the flax seed markets, the price of linseed oil has been advanced.

The range of prices that have been a feature of the linseed oil markets for some time have almost disappeared and quotations are given on a more even footing than have been obtained during the last few weeks. The lowest price quoted this week was 71c for raw and 74c for boiled, while the majority in the trade quoted at the following figures:

	Per gal. Raw	Boiled
1 to 2 barrels	72c	75c
3 to 5 barrels	71c	74c
6 to 9 barrels	69c	72c

Turpentine.—Slight advances have occurred in the price of turpentine on the Savannah markets during the week, but have not as yet affected the local markets. Export trade is said to have improved from the primary markets, with large shipments leaving frequently for England. This has resulted in firmer prices being quoted. There is a possibility of the price advancing on the local markets but no definite word can be secured at this time as to the amount of the advance. On the local markets there has been a slight improvement in the volume of business passing, especially to the country districts. The large centres are not using the usual quantities of turpentine as compared with the country districts. The following prices which are quoted as firm, are general on the local markets:

	Per Imp. gal.
Single barrels	64c
2 to 4 barrels	63c
5-gallon lots	71c

Glass.—The selling of cut lights and other small sizes seems to be the only movement noticeable in the glass trade. Preparations for winter have increased the sale of small sizes, presumably for storm sash, etc. Prices are unchanged, and are reported firm. Quotations are shown in the currrent market quotations.

Gasoline.—A further advance of ½c per gallon is in effect on gasoline. Higher prices were predicted in these columns two weeks ago, and it would not be altogether unexpected if further increases took place. Local jobbers state that gasoline is becoming very scarce on the American markets, and that prices have advanced accordingly in the U. S. markets. The following prices are quoted as firm on the local markets.

	Per gal.
40-gal. drums	18½c
40-gal barrels	20½c
Tank wagon	17½c

Putty.—The demand for putty does not show any sign of improvement, and business in this product continues dull. The inactivity of building operations during the past season has resulted in a very small movement of putty. Although the conditions generally, both for the present and the future are dull, the price of putty remains firm. The following prices are quoted on the local markets:

	Per 100 lbs.
Bulk in casks	$2.50
Bulk in 100-lb. drums	2.70
Bulk in 25-lb. drums	2.80
Bladders in barrels	3.10

Pure putty 60c per 100 lbs. advance.

Canada Paint News

The September issue of Canada Paint News, a magazine of helpfulness for paint dealers and consumers, published by the Canada Paint Co., Montreal, is an exceptionally attractive number. On the first page of reading matters there appears a talk on "Making More Money in Your Fall Paint Business," by W. H. Newton, sales manager of the company. A likeness of Mr. Newton also appears. Views are shown of window displays; advertising helps; general offices, and also the Calgary warehouse and Toronto office of the company. One page is taken up with cuts showing likenesses of the company's travelling representatives.

Effectiveness of Individuals

Leading Points for Self Analysis—It is Good to Test Your Own Efficiency to See Whether You Can Improve and Where—Where Do You Stand?

In an organization, as in a chain, the weakest link determines the strength. And the effectiveness or efficiency of the organization depends on the effectiveness of the individuals as well as their fitness to work together. Each one, to be effective, must be personally efficient, and as it is well to test the efficiency of a machine, so is it good to test our own efficiency to determine whether we can improve and where; to take account of stock, and find along what lines should be our effort to expand.

Following are a few leading points for self analysis, suggested by Edward Earle Purinton in The Independent. An honest "Yes" would mean 100; an honest "No" 0; a partial credit can be made according to the self judgment of the individual. The sum total of the credits divided by 25 will give your average estimated efficiency.

If you're not satisfied with the average, the credits will indicate where thought and effort can be applied to raise it.

Per Cent.

1. Is your work agreeable? .....
2. Are you doing it in the best, and quickest way? .....
3. Have you found where your greatest power lies? .....
4. Have you a definite aim in the line of this power? .....

Weekly Paint Markets

MONTREAL

MONTREAL, Sept. 30.—So far as business is concerned the situation is practically without change, and attention is rather turned to the question of prices of mixed lines on the announcement of another decline of 50c in the price of lead. Some authorities continue in the opinion that there will be no reduction until the end of the present fall campaign, although by the 1st of November the air should be cleared to such an extent that it will be possible to form some idea of the basis upon which the spring campaign will be conducted. Offsetting the decline in lead there is a big advance in the price of linseed oil of 5c to 8c, while turpentine is stiffer. Also there is the important sustaining factor of zinc's strong present and uncertain future position. Following in the wake of spelter, zinc quotations should be easier, but the fact remains that producers are making no quotations on futures, and with no assurance as to the cost of supplies manufacturers are unable to figure on producing costs with any degree of certainty. Therefore, there is assurance that the fall campaign, which will continue for the next six weeks, will see no change in quotations on mixed paints, and before another campaign is started it is hoped that the outlook regarding lead, oil, zinc and turpentine will be more clearly defined.

The dragging state of trade is largely due to slow buying in the country districts. This appears to be the result of the general tendency to keep stocks at the minimum and to the feeling that the market is weakening and that future prices will be lower. However, there is a generally hopeful feeling, and trade on the whole shows an improvement on the same period a year ago, especially in the manufacturing centres where war orders have led to the development of special business of a satisfactory nature.

Linseed Oil.—There are two features to the linseed oil market this week. On the one hand, there is an advance of 5c to 8c a gallon, and on the other, an evening of prices, by which practically all quotations are brought to the same level. For months the oil market in Montreal has been very unsettled. There is no understanding between either manufacturers or jobbers as to quotations, with the result that the erratic state of the flax market gave wide opportunities for competition and price-cutting. A range of several cents appeared in the prices as between houses following the flax market and others quoting on the strength of advance purchases. The evening up appears to be the result of all interests getting down to the basis of the present flax market, which has been advancing materially recently. Whether conditions will continue as they are for any length of time remains to be seen, but there is no definite indication that a price agreement has been reached. Rather it looks as though stocks had been brought to a normal state, and the trade was following the market in a normal manner. Quotations now generally are:

	Raw.	Boiled.
1 to 2 barrels	68c	71c
3 to 5 barrels	67c	70c
6 to 9 barerls	66c	69c

White Lead.—The fact that the reduction of 50c in the price of white lead, announced a week ago, failed to eliminate the feeling of weakness—since increased—has resulted in a further cut of the same amount. On the new basis of $9.45 for ton lots, the market has become steady and firm. The reduction of $1 brings the quotation to a par with the present low value of pig lead, considering the increased duty, and with small reserve stocks in the hands of producers, it is felt that a resumption of the buying movement abroad, likely to follow the flotation of the Allies war loan and the readjustment of exchange, will result in firmer prices in the American and Canadian lead markets.

Zinc.—The unchanged present and uncertain future of zinc is the great offsetting influence against the white lead decline. Manufacturers state that they are unable to get quotations on futures, and, therefore, they cannot adjust advance prices on products. The tendency should be downward in view of the declines which have taken place in spelter from its high point, but the whole situation is clothed in uncertainty.

Turpentine.—There is a stiffer feeling in the turpentine market, and readjustments of the lower quotations are being made. While at writing the figure of 58c was still heard, it is doubtful if purchases can be made at that price next week. The low quotation will probably be 60c for the immediate future, and the following figures will cover the usual range:

	Per gal.
½-barrel lots	61-65c
1-barrel lots	58-62c
2 to 4-barrel lots	57-61c
5 to 10-barrel lots	56-60c

Gasoline and Benzine.—An advance of half a cent has been made on gasoline, the basis now being 18c for drums and 17½c tank wagon. Business is reported as keeping up fairly well. Benzine is still quoted 14½c for drums and 14c tank wagon.

Glass, Putty, etc.—There is no change in the glass situation, and prices are steady and firm on poor demand. Putty is also firm and unchanged. The consumption of both must be expected to continue in a low state until there is some revival in the building trades. Colors continue unsettled, with constantly firming prices on certain lines.

TORONTO

TORONTO, Sept. 30.—Interesting developments have occurred in the paint markets during the week. White lead, as predicted by Hardware and Metal two weeks ago, has declined further, while linseed oil has advanced seven cents per gallon. Quotations on prepared paints remain unchanged for the present. Retailers' stocks of ready mixed paints are as a rule fairly light, at the present time. The continued high price of ready-mixed paints has had a tendency to curtail the buying movement.

White Lead.—Another decline of 50 cents per 100 pounds has taken place in the price of white lead. Pure lead is now quoted at $9.60 in ton lots with the usual advance of 30 cents per 100 lbs. in less than ton lots. The decline was not unexpected. Hardware and Metal of Sept. 18 reporting a decline of 50c per 100 pounds, stated as follows:

"**The new basis is not by any means a strong one, and there are likely to be further declines in the future.** It might

(Continued on page 72.)

"O. K., GO AHEAD!"

There is no time wasted with doubtful enquiries and wasteful experiment when

B-H "ENGLISH" PAINT

is chosen.

The architectural profession, the painting trade and the public in general are awaking to the fact that

B-H "ENGLISH" PAINT

is really more convenient and better in *every* way than hand-mixed paint.

It is more uniform, and it contains the best materials,

70% of Brandram's B.B. Genuine White Lead and

30% of Pure White Zinc

in White and all tints.

It is ground much finer and altogether gives a better finish and more lasting protection than any other kind of paint, hence its rapidly increasing sales.

TORONTO MONTREAL WINNIPEG

What the Advertising Manager

would do this Fall—if he owned a promising hardware business like yours.

THE one Dept. in your store which responds so quickly and so profitably to real, aggressive selling plans is the Paint Dept., especially if you have stocked a well-known and long-established line, such as The Canada Paint Co.'s

How to effectively push your paint sales is therefore something you are interested in knowing and putting into practice.

In the September number of CANADA PAINT NEWS, several articles are devoted to this subject, and a few minutes' study of the articles referred to will give you a clear and practical idea how to go about this Fall Campaign in order to reap the fullest advantages of making more sales and adding permanent customers to your business.

Your store needs advertising—good advertising and liberal advertising—in order to sell more paint. Let us co-operate with you in advertising your business.

We have the attractive features you require to dress your windows. We have the newspaper electros that are distinctive and effective—we have the color cards and circulars, and the means of promoting your prospective customers so that they will buy paint from you instead of elsewhere.

Let us get together on this PAINT THIS FALL idea. Use the Advertising Order enclosed with CANADA PAINT NEWS. The sooner you and the Advertising Manager get busy together—the sooner you will experience increased profits from your paint sales. Write for a copy of CP NEWS if you did not get one.

Pratt & Lambert Varnish Co..
Chicago, Ill.

Gentlemen.

We wish to inform you that our varnish business has exceeded any other year of the past. It is just a year ago that we took hold of the Pratt & Lambert line of varnishes and enamels and have congratulated ourselves with the amount of Pratt & Lambert varnish sold in the 12 months time.

Our original order amounted to $365.00 with the expectations of buying $500.00, but up to the present our Pratt & Lambert varnish business has increased to $1100.00 which is more than double the amount we expected to sell

It might interest you to know that we have been featuring one line of varnish for the past ten years, doing an annual business of $800.00 to $1000. We have kept up our volume on the old line, thus doing a $2000 varnish business instead of $1000, It would have been impossible to do this volume without your Sales Promotion Helps in creating a demand from the customer, painter and home builder, and the fact that Pratt & Lambert varnish and Vitralite Enamel are almost invariably specified by the architect

Yours truly,

N Popp

N. POPP placed a first order for Pratt & Lambert Varnishes of $365, expecting to sell $500 worth the first year, and actually sold $1100 worth. Read his letter. Note that he sold as much Pratt & Lambert Varnish the first year as on another line that he had been handling for ten years. It proves that no matter what other brand or brands of varnish you sell you can build up a distinctive, profitable trade by handling Pratt & Lambert Varnishes — and if you handle Pratt & Lambert Varnishes exclusively, you can undoubtedly do more varnish business than you have been able to do before by handling several lines.

ASK the man who sells them

"The man behind the gun" is the man who can best testify as to its merits and the man who sells paints and varnishes is the one who can give the best verdict as to their selling qualities.

Martin-Senour Paints and Varnishes attract and retain patronage. They are sure re-order getters everywhere

MARTIN-SENOUR PAINTS AND VARNISHES

MADE IN CANADA

This is what one of our aggressive dealer agents, who has gladly accepted and profited by our selling co-operation, has to say of the Martin-Senour exclusive agency:

Bruce Mines, Ont., July 31st, 1915.

The Martin-Senour Co., Limited,
Montreal.

Dear Sirs:

Yours to hand, in which you state you are sending a further supply of advertising material. I wish to thank you kindly for your interest in the matter, and I feel sure they will be up to the standard of all other products of the Martin-Senour Company.

I also wish to express my satisfaction with the pleasant business relations I have enjoyed with your firm. It certainly is a pleasure to do business with your company, and the goods are such that you can live, move, and talk Martin-Senour products and not be liable to wake up some morning and find out it was a nightmare, and that the goods were not what you thought they were.

Yours truly,
E. A. WHITE.

Let us supply you with the names of scores of other satisfied and successful dealer agents.

This Mark Guarantees

the only Berea Grit Grindstones—protection to dealer and customer—fair treatment — quick delivery — mighty good profit. Here are swift-grinding stones that never wear humpy—famous for 50 years — specially selected for your class of customers—

EMPIRE MODEL
to run by Gas Engine

CLEVELAND GRINDSTONES

Sold only to Hardware and Implement Dealers.

It will be a good business stroke to write us for illustrated Trade Price List and a copy of our famous book, "How To Keep Mail Orders At Home." Tell us the name of your jobber.

The Cleveland Stone Company

Leader-News Bldg., Cleveland, O.

Butler's

FAMOUS SHEFFIELD CUTLERY

HAS STOOD THE TEST FOR MANY GENERATIONS

It is made throughout on their own **premises,** from finest grade of steel, regardless of cost, by skilled workmen.

Butler's "**KEEN**" and other Razor brands are BEGUN AND FINISHED at Trinity Works, **NOT SENT** to Germany for grinding.

"Sheffield made, Both haft and blade."

TRADE-MARKS

B. J. COGHLIN CO., LIMITED, Office and Factory: Ontario St. East, MONTREA

THE PROGRESSIVE MANUFACTURING CO.
Torrington, Conn., U.S.A.

FORSTNER BITS

bore their way right through tough, hard, knotty, cross-grained wood and leave a smooth hole and a clean surface. That's performance. THEY DIFFER FROM ALL OTHER BITS, BEING GUIDED BY THE RIM INSTEAD OF THE CENTER. That's scientific construction. They bore any arc of a circle and can be guided in any direction. That's adaptability.

Made for Brace—made for machine. Packed singly—packed in sets. That's convenience. And they sell to Wood Workers, Carpenters, Cabinet Makers and others. That's why you should sell them. Order through your jobber to-day.

YOUR GUARANTEE

GIPE-HAZARD STORE SERVICE CO., LTD.
97 Ontario St., Toronto, Canada

INSTALL Gipe-Hazard Carriers — use them ten days—put them to every test—and if they do not give quicker, better and more satisfactory store service than any other system, they may be returned at our expense. Fair enough, is it not? Investigate our modern Electric Cable Cash Carrier and Pneumatic Dispatch Tubes.

Send for our new Catalogue F.

ESTABLISHED A.D. 1830

Just Three of Our Good Lines for Fall Trade

This is our leader, but we have 12 other numbers of claws.

We also make 6 tube and single tube punches as well as drive punches.

Our line of plumbers' tools is complete—all goods of quality.

MANUFACTURED BY

William Johnson

Send for Particulars

HELLER-ALLER TANK HEATER

the only thing on earth that will keep a stock tank from freezing

Heater is Made of High-Grade Charcoal Iron, and Will Remain on Bottom of Tank Without Being Fastened Down.

The entire heater is cast in one piece, including the draft flue, takes on a uniform temperature and will not crack. Is 24 inches high (exclusive of pipe), and 12 inches in diameter. Has ash pan and grate, and basket, firepot and grate; ALL heavy cast iron.

Will burn any kind of fuel and with proper care will last a lifetime.

One farmer customer will lead to many others. Drop a line for full details.

"BAKER" Windmills, Pumps, Tanks, Pump Tanks. Prompt Shipments—Good Goods.

JOHN OAKEY & SONS, Limited
Manufacturers of
Emery, Black Lead Emery Glass and Flint Cloths and Papers, etc.

Wellington Mills, London, England

You can talk across the continent for two cents per word with a WANT AD. in this paper.

A Straight Talk from the Manager

Buying Wisely

BUYING has advanced a long way towards becoming a science since the old days when it consisted of tedious haggling between buyer and seller, resulting in a final compromise on price.

Nowadays a buyer who knows conditions, because he is constantly studying them, can make more ultimate profit in sending his orders by mail than his old-time predecessor could by much squabbling and wrangling with a salesman. An instance of this kind of buying is furnished on page 36 of last week's Hardware and Metal. Here is an extract from a very interesting article:

"Just one personal touch in closing this article. Mr. Fauteux is a reader of Hardware and Metal. He follows the markets closely. Some time ago he observed that an advance was about to take place in paints and white lead. He bought heavily, and when the advance took place, raised his prices along with other dealers. The result has been that, while the volume of paint business done in 1915 has been less, his profit from this department is bigger than it was last year."

The lesson to be derived from Mr. Fauteux's experience is obvious enough. It pays to study Hardware and Metal.

J. G. L.

Condensed or "Want" Advertisements

Those who wish to sell or buy business or stocks, obtain competent help, connect with satisfactory positions, or secure aid in starting new enterprises, should not fail to use the Want Ad. Advertisement Page of HARDWARE AND METAL. It is the central market place of the hardware trade throughout Canada. There is always someone somewhere looking for just such proposition as you have to offer. RATES (payable in advance):—2c. per word first insertion, 1c. per word subsequent insertion, 5c. additional each insertion, when Box Number is required. Each figure counts as one word.

POSITION WANTED

MARRIED MAN OF FORTY, WITH TEN years' retail and twelve years' wholesale hardware, also travelling experience, open for engagement as traveller for hardware or paints, or manager and buyer for retail. Best of references. Apply Box 219, Hardware & Metal. (42)

HARDWARE CLERK, YOUNG MAN WITH good experience in general hardware, is open for position in good Ontario town or city. Best references. Apply Box 216, Hardware & Metal. (40)

WANTED

WANTED — MANUFACTURERS' AGENT, specially interested and experienced in hardware and metallic products, making business visit to England and Scotland about mid-October, would handle on commission a few special lines. If you have a surplus production, or goods specially suited for that market, or wish a special report on your line of goods, address Box 217, Hardware and Metal. (40)

FOR SALE

$4,000 HARDWARE STOCK—OWNER OF factory requires more cash; Quebec Province; twelve thousand dollar business yearly; could make it general if desired; no opposition in heavy hardware. Excellent farming community. Half cash, balance secured. Apply Box 218, Hardware and Metal. (44)

FOR SALE—FORTY-SIX FEET OF SHELVing and facing, including two glass cases with lower section of sliding doors. Butternut wood, stained dark green. Original cost over $300; will sell for $150. Will send cuts showing fixtures or cuts may be seen at any office of Hardware and Metal. Box 199, Hardware and Metal. (41)

MISCELLANEOUS

FIRE INSURANCE. INSURE IN THE HARTford. Agencies everywhere in Canada.

WAREHOUSE AND FACTORY HEATING systems. Taylor-Forbes Company, Limited. Supplied by the trade throughout Canada. (tf)

ADDING TYPEWRITERS WRITE, ADD OR subtract in one operation. Elliott Fisher, Limited, Room 314, Stair Building, Toronto.

DOUBLE YOUR FLOOR SPACE—BY INstalling an Otis-Fensom hand-power elevator you can use upper floors as stock room or extra selling space, and increase space on ground floor. Costs only $70. Write for catalogue "B." Otis-Fensom Elevator Co., Toronto.

GOOD STENOGRAPHERS ARE WHAT every employer wants. The place to get good stenographers is at the Remington Employment Department. No charge for the service. Remington Typewriter Co., Ltd., 144 Bay St., Toronto.

Climb up to Larger Profits by selling

The "Perfect"

Fruit-Picking Ladder

It is, beyond doubt, the ideal fruit-picking ladder—and its construction allows the turning up of the pointed portion or legs, thus making a long single ladder which is easily and securely adjusted in the branches of the trees.

The security with which the "Perfect" can be set up on uneven ground makes it an excellent general purpose ladder. The legs are connected by means of rounds, as in a straight ladder, while each step is securely supported by an iron-rodded truss.

Get in on this profitable line. Write for our catalogue to-day.

MONTREAL TORONTO WINNIPEG

DIRECTORY OF MANUFACTURERS

Hardware and Metal receives, almost daily, enquiries for the names of manufacturers of various lines. These enquiries come from wholesalers, manufacturers and retail dealers, who usually intimate they have looked through Hardware and Metal but cannot find any firm advertising the line in question. In many cases these firms are anxious to secure this information at once. This page enables manufacturers to keep constantly before the trade lines which it would not pay to advertise in larger space.

Big Profit and Satisfaction in Selling

"AYLMER" Force Pumps

They are certain to sell easily because it has several advantages over the ordinary style.

Has longer stroke, more power, and works easier.

While designed for hand use it can be readily converted into a Windmill Pump by the addition of a flat bar, which screws into the cross head at top.

It will be to your interest to write for full particulars now.

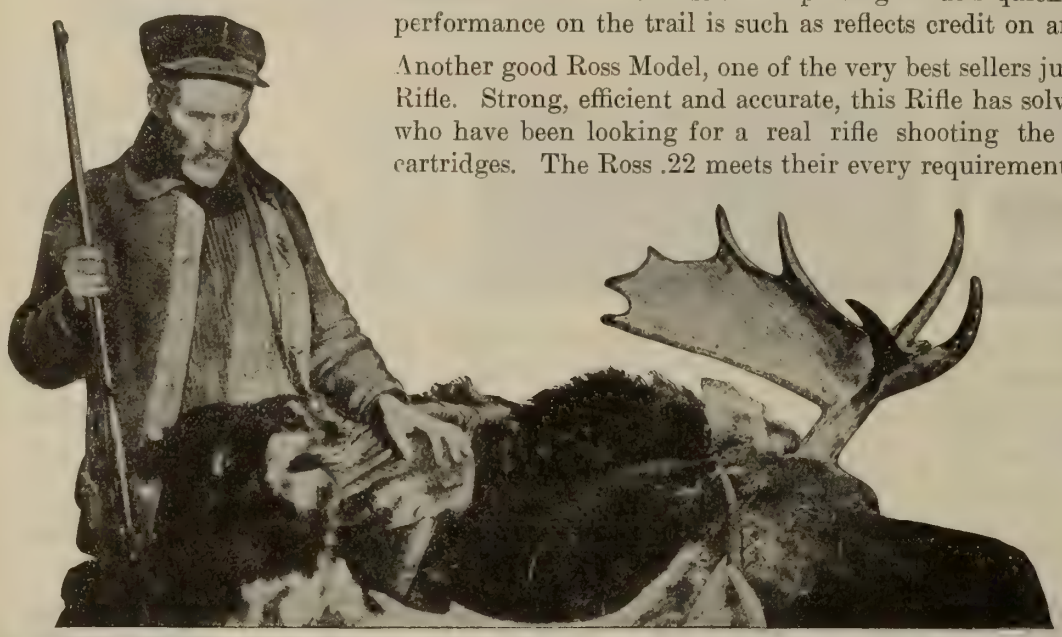
EXPERTS ENDORSE THE ROSS RIFLE

Expert shots and big game hunters of four continents have written, testifying to the marvellous killing power and accuracy of the Ross .280 Sporting Rifle. The Ross .280 is made in Canada, and in power, accuracy and finish, challenges the best of the imported rifles.

Dealers also find the Ross .303 Sporting Models quick sellers and rifles whose performance on the trail is such as reflects credit on any shop that sells them.

Another good Ross Model, one of the very best sellers just now, is the Ross Cadet Rifle. Strong, efficient and accurate, this Rifle has solved the problem of those who have been looking for a real rifle shooting the inexpensive .22 calibre cartridges. The Ross .22 meets their every requirement.



Dealers' discounts on all these lines are sufficient to justify pushing the sale of Ross Rifles.

Write to-day for particulars.

33-S

A Revolution in a Dusting Mop

TRIANGULAR DRY-DUSTING MOP with our new adjustable handle.

This handle allows the mop to assume its normal position to the working surface for dusting under beds, low furniture and the walls. Tarbox chemically treated Mops will not smear nor soil.

DRY-DUSTING FLOOR POLISHER.

With this mop halls, borders and large floor spaces are run over in a trice, the corners as well as open spaces freed of every trace of lint or dust—leaving a **hard, dry polish that is neither slippery nor greasy.**

A chemical compound has been discovered which, being introduced into suitable fabrics, produces a *"dust absorbent"* that is more efficient for dusting purposes than oil, and is not greasy and will not smear nor soil. The chemical treatment lasts as long as the mop, as the treatment becomes part of the fabric. The lint and coarse dirt are readily shaken out, but the dust is absorbed or attached to the fabric and held there by the chemical treatment. When the mop is coated with dust so that it will not do its work properly, wash with soap and very hot water. (Don't boil). This exposes the treatment to the air, from which its dampness is gathered, renewing its dust-absorbing properties. No re-treatment is required. Leaves a dry, hard polish that is not slippery, nor sticky.

TARBOX
DRY **NO OIL** DUSTLESS
Mops and Dusters

The high efficiency of the Tarbox Dry-Dusting Mop and the fact that there is no cost of upkeep—no smears—no soils on floors, furniture or rugs, are points that appeal strongly to the housewife.

Tarbox Mops will put a stop to the endless complaints that you've been having through the damage caused to household furnishings by your line of oil mops.

Sell one to a home and you'll soon sell to the next-door neighbor, because they invariably win the enthusiastic recommendation from every user.

Send in your trial order to-day, direct or through your jobber. There is a most desirable profit.

Popular in Service and Price

Jamieson's Pure Prepared Paints and Varnishes

Which makes the better paint proposition?

Is it the immediate profit you make on a sale, or is it the prestige that the goods secure for you in your vicinity?

Why, the latter, to be sure! To make a proposition really good, you must satisfy your trade—you must deliver the goods that make them want more.

The Jamieson line possesses merits that make it a sure business-builder everywhere. It sells at a popular price, and pays a very reasonable profit.

It's the proposition you're looking for.

This Cut-Out Given Free To Dealers

In connection with our big November Campaign on UNIVERSAL Coffee Percolators, we will furnish free to all dealers this handsome, life-size cut-out. Lithographed in nine colors, and has two detachable arms, so that it may be used with either a Percolator or Urn. This is something entirely out of the ordinary and is bound to attract the attention of everyone passing your window. In addition to the cut-out there are four show cards on UNIVERSAL Percolators.

Cash Prizes
of
$25.00 $15.00 $10.00

for the best window trims in which this display is used. There are no strings to this proposition and all window displays will be given consideration whether or not percolators are used. The parts on which the windows will be judged are Selling Value, Originality of Display, Artistic Arrangement.

Display Stand
FREE

With each first order for 1 dozen UNIVERSAL Percolators we furnish, free of charge, a handsome display stand which acts as a silent salesman in your store. This stand is of sheet steel, beautifully finished in reproduction of mahogany, and holds five percolators.

UNIVERSAL COFFEE PERCOLATORS

Make permanent customers by giving perfect satisfaction. They make better coffee in less time and with less ground coffee than any other percolator on the market. The patented pumping device and spreader plate, the heat-proof glass top and their superior construction are distinctive selling points of UNIVERSAL Percolators.

FOR YOUR LOCAL ADVERTISING

In addition to the November window trim we furnish, free of all cost to you, ready-to-print newspaper ads, lantern slides, booklets, show cards, etc.

For further particulars write to your jobber or direct to us.

40% DISCOUNT TO DEALERS FOR DOZEN LOTS F.O.B. ST. CATHARINES. Terms 2% 30 days.

A Quick Sales Producer

The steering is done by simply bending the runner and NOT the wooden frame.

The runner (patented) is made of BEST SILVER SPRING STEEL and for that reason it will always keep its shape, is flexible, lasting and has a smooth running surface and being GROOVED is guaranteed NOT to skid.

The sled bench (patented) is a solid stamping of WROUGHT STEEL, being lighter, neater and stronger than ANY OTHER method of construction.

The top (patented) DOES NOT MOVE, thereby enabling the operator to guide the sled much easier without danger of pinching the fingers as is common with OTHER flexible sleds.

The safety sled is made from the best suitable material and EVERY PART riveted. They are neatly striped and decorated.

Packed two in a bundle. No shipment made of less than 1/6 of a dozen. The best assortment to buy in dozen lots is:—

1/6 of a dozen, 33 inches. 2/3 of a dozen, 37 inches.
1/6 of a dozen, 41 inches.

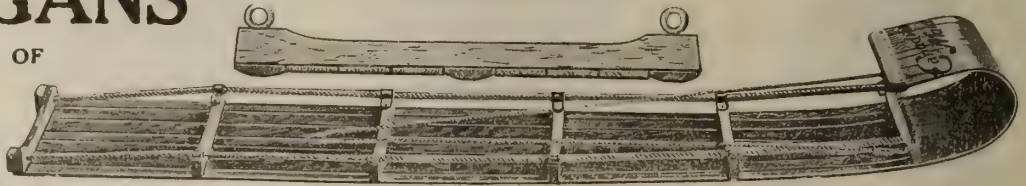
TOBOGGANS—"THE CANADIAN MAID"

TWO GREAT FEATURES OF "THE CANADIAN MAID"

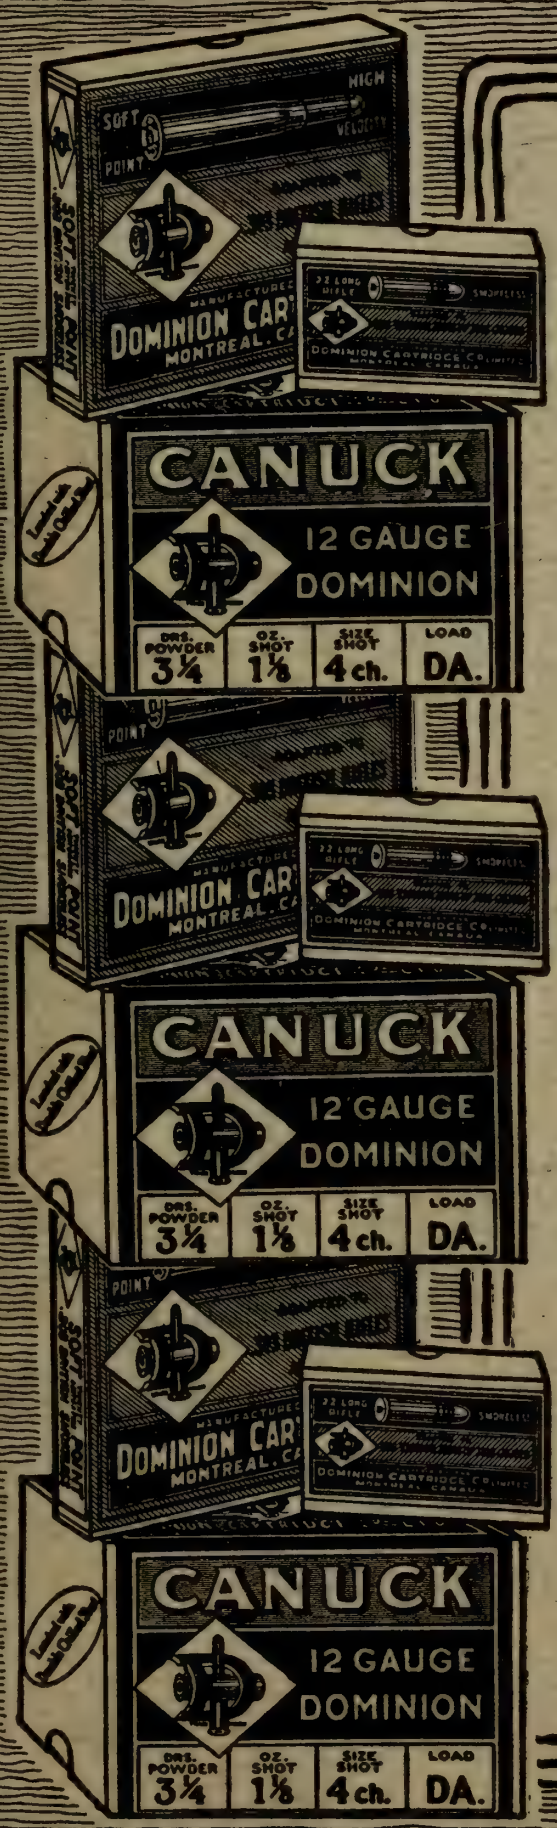


First—The Raised Front. For about eighteen inches the front of the toboggan has a gradual slant. Result—the toboggan does not PUSH the snow in front of it, and thus you have GREATER SPEED, AN EVEN AND COMFORTABLE MOTION and a LONGER RIDE. Note this sketch—which shows how other toboggans without this feature shove the snow along.

Second—The Three Runners—which give emphasis to the above-mentioned feature and which guarantee safety, as it aids in controlling the toboggan. The runners hold the toboggan to the track. With two, six or eight passengers, the "Canadian Maid" No. 4 toboggan is equally easy to control, the runners helping materially. Accidents have occurred which can be explained by the fact that the usual flat-bottom toboggan was used. Iron and steel Runners fitted at slight additional cost.

PACK-TOBOGGANS A SPECIALTY. Full information on request. Write for Prices and Dealers' Discounts.

WALTER DEAN, ∴ Foot of York Street, ∴ TORONTO, CANADA



Stack them up

Put them on your front shelves. Pile them on the counters—in your show cases. Fill your windows with Dominion Ammunition. Place it where it can be seen.

You can always do a good sporting goods business when you push Dominion Ammunition, especially at this time of the year, when the hunting season is in full swing.

Also it will pay you to identify your store with Dominion Ammunition by connecting up with our big national advertising campaign. This is developing a lot of new business—very much worth-while business—and a lot of it can be drawn through your doors by letting the shooting public know that your store is Dominion Ammunition headquarters in your town.

Of course, you know the line—CANUCK, the fastest shot shell made—IMPERIAL, the shell that has won so many trophies at the big tournaments—and the old reliables, REGAL and SOVEREIGN. All are loaded with the best smokeless powders and double chilled shot. And then there is the black powder shell, CROWN, a low-priced, dependable load that is shot in Canada in larger quantities than any other shell made.

And metallics! There's a Dominion Metallic of a size and load for every popular rifle and any kind of game—ranging from BB caps to the high power sporting cartridges, big enough to stop an elephant.

Dominion is "the ammunition made wholly in Canada."

Make Your Screw Drivers Sell Themselves

This attractive display rack and Pexto Solbar Screw-drivers mean *more* sales at *less* cost.

The display does a clerk's work and more. It shows the most popular styles quickly and effectively and gives prices, if you desire.

Finished in four colors—orange, blue, black and white. Takes up little room in the window or inside the store, yet can't be overlooked. Stands or hangs equally well. Spring-clip ledge keeps screw-drivers firmly in place. All the numbers, with weights, listed on the back.

Pexto Solbar Screw-drivers have a solid steel bar extending their entire length, so that they withstand unusually hard use. The handle fits the hand and doesn't slip.

If your jobber can't supply you with this display rack, write us.

Attractive Store in Lumbering Town

Proprietor of Store at Victoria Harbor States That Even in a Rural Lumbering Town the People Appreciate an Attractive Store—Makes Use of 5-10-15-25c *Counters*

THE town of Victoria Harbor, Ont., located on the Grand Trunk Railway, in the County of Simcoe, has a population of about 1,800. Lumbering is the chief industry. One of the lumber companies operates three large sawmills cutting about 300,000 feet of lumber daily. The farming country in the district is fairly good.

Eight years ago, this month, W. H. Rumball & Co., started in the hardware and furniture business at Victoria Harbor. At that time a $4,000 stock was carried. To-day the stock is about $9,000 and Victoria Harbor has a hardware store that would be a credit to many towns of much greater size. W. H. Rumball is a great believer in good displays. The accompanying views of the main store interior will give the reader an idea of how attractively the various lines of hardware are displayed. Regarding modern stores and equipment, Mr. Rumball stated, "We are confident that even in a rural lumbering town the people appreciate an attractive store and we find our display counters splendid drawing cards."

The building is of cement block construction 50 ft. x 80 ft., with basement under the entire store. The store proper is 50 ft. x 60 ft. The ceiling 12 feet high is covered with wall board. There are two display windows in the store front, with main entrance between the windows. One window is used for displaying hardware, stoves, etc., while the other is used for featuring furniture.

The second floor is entirely devoted to the display of furniture with the exception of a section 18 x 18 used for undertaking.

The tinsmithing department is located at the rear of the main store interior. In this department, tinsmithing, plumbing, electrical work, hot water, steam and hot air heating, and other work of a similar nature is carried on under the supervision of Jno. Reynolds. The undertaking department, under the direction of Mr. Allison, is conducted in con-

nection with the furniture department.

The Hardware Department.

Probably the most striking feature in connection with the Rumball store, and the one that will impress retailers, is the neat and attractive manner in which the various lines of hardware are stocked and displayed. Particular attention is paid to the hardware department by Mr. W. H. Rumball and his three sons.

To the left, on entering the main entrance, there is a 60 ft. stretch of shelving carrying tools, general hardware lines, and paint. Towards the front of the store a portion of the wall fixture has been used as a special display section for mechanics' tools. In this wall case, shown in one of the accompanying views, there is a neat display of hammers, saws, bench axes, draw knives, screw drivers, saw sets, painters' supplies, etc. The case is enclosed by sliding glass doors. Shelf boxes have been provided for a portion of the stock, the samples of the contents being neatly arranged on the faces of the boxes.

Attractive counters run down the full length of the store.

5c and 10c Counters

Special display tables have been provided for displaying various lines of household goods. These special tables run parallel with the counters in front of the hardware section. There are four tables featuring goods at 5c, 10c, 15c and 25c. The tables may be seen in one of the accompanying views. Neat price cards (the 5c and 10c cards may be distinctly seen in one of the accompanying views; are placed in prominent positions on each table. On the 5c table there are many lines of 5c hardware, including

W. H. RUMBALL
Victoria Harbor, Ont.

egg whips, fly swatters, teapot stands, mouse traps, basting spoons, graters, pipe collars, etc. These special display counters have made many sales, and it has been found that customers are very much interested in the various lines thus displayed. Special display counters of this kind are now becoming quite popular in hardware stores, and a great many are being used in various parts of Canada.

The department and variety stores in our large cities secure a large portion of their business through displaying many lines of goods in just such a manner as that adopted by W. H. Rumball & Company.

The upright pillars in the store, have had shelves attached thereto, and on these, various seasonable hardware lines are displayed.

A silent salesman facing the main entrance is used for displaying table and pocket cutlery, case goods, electrical specialties, etc.

At the rear of the silent salesman a table is used for displaying cut glass. Special shelving extending down the centre of the store has been provided for displaying lamps, lanterns, crockery, glassware, etc. The front of the partition separating the main store interior from the tinshop, has been used effectively for displaying harvest and garden tools, cross cut saws, cow chains, trace chains, etc.

To the right of the main entrance the office is located. One portion of the office forms a background for the furniture display window.

To the rear of the office is the stove department, where there is ample space for displaying ranges, heaters, oil stoves, washing machines, etc.

On the right side of the store there is also a platform or mezzanine floor, half way between the floor and the ceiling. On this elevated floor, which can be seen from all parts of the store, such lines as express wagons, bicycles, baby carriages, go-carts, clothes baskets, etc., are displayed.

(Continued on page 46.)

View at right of main entrance to hardware store of W. H. Rumball & Co., Victoria Harbor, Ont. Note stove department and also the mezzanine floor for displaying express wagons, bicycles, baby carriages, etc.

Drawing Tight Line Over Credits

Apparently Small Loss is Disastrous When Analyzed—Suggestions on Watching New Applicants for Credit—The Retailers' Difficulties and Lack of Protection

Written by the Credit Manager of a Montreal Wholesale House.

ABOUT a month ago a merchant to whom I was talking, pointed out a woman entering his competitor's store just across the street, and said in an aggrieved tone:

"I asked that woman to pay her bill which was overdue, and now she has quit buying."

He believes that she has plenty of money and that he will get his bill paid, but the episode does not end there. Probably the other merchant could tell a similar story about people coming to my friend's store.

This particular question of money and credits is a constant drain on the energy of the retail merchant. How far should he allow his bills to run, and to whom should he give credit?

Unfortunately he is at a really serious disadvantage in answering this question when compared to the rest of the business world. The manufacturer, wholesaler, and jobber have their Dun and Bradstreets, who for a very small fee in a year are prepared to give them definite information of the capital, business, habits and character of any and all firms to whom they sell. The large instalment houses are pretty well protected with liens on the goods they sell.

But the retail merchant is to a great extent unprotected. The more successful merchants are seriously harassed by the competition, in this as in other respects, by the inexperienced entries into the field. When a customer applies for credit it is a difficult thing to refuse if the business is conducted along these lines. They may be positive deadbeats, but under the present system it is exceedingly hard to know it. On the other hand, they may have money, but be exceedingly slow to part with it.

What is the remedy?

Education of the customers that when they buy goods for their house they must use business principles would undoubtedly simplify the problem. At present a great many customers, whether able to pay their bills or not, seem to consider it a positive insult to be asked to pay their accounts. Why should this be? The retail man is told by his wholesale dealers that he must pay and it has come to be regarded as a mere business detail. He must pay his accounts when specified at purchase or give a good explanation. Otherwise his credit suffers and his field for purchasing narrows, as other houses are promptly made aware of this condition. But the householder calmly flits from store to store for years, leaving unpaid bills. The man who has been stung seems to take a certain amount of consolation from the fact that his competitor is suffering the same dose, although he may be carrying a couple more customers of the same brand at which the competitor is smiling shrewdly. The competitor on his part would not deign to ask information before opening a new account. It looks like more business he is stealing away.

This brings us to co-operation. There is a small town in Eastern Ontario where it is difficult for the deadbeats to exist. The keenest competition exists and the merchants are up-to-date and aggressive. But they know the value of co-operation. They keep in touch with each other, on markets, prices, and people. They know with each other, on markets, prices, and people. They know that information they give is well repaid on other occasions. Consequently, it is not a Paradise for people who do not pay their bills. The merchants all insist on their customers paying their bills promptly. The people are learning that they must carry out their agreements on time, or that they will be forced to pay cash at all times.

There is hardly a doubt but what the future will see a credit association established for the retail men. It is said that ninety-five per cent. of the world's business is transacted on credit, and in order to destroy the parasites which cling to this class of trade, some method must be found. There will always be a percentage of losses by bad credits, but a great proportion of the losses suffered by retail merchants is preventable.

Consider for a moment the tremendous actual loss on a bad debt. Let us say for example that on ten dollars' worth of goods the gross profit is about $2. After all expenses are paid the net profit is 50c. Now suppose a ten-dollar account is lost, you lose the actual net result of two hundred dollars of sales. Or even figuring on gross profits, you lose the result of fifty dollars of sales, and throw in your efforts and expenses gratis.

Furthermore, out-of-town dealers, particularly, as well as city stores, by allowing long credits actually encourage cash dealings with department stores. If they restricted their credits closely there would be less surplus cash to be sent to their biggest competitors. Certainly if their customers can pay for department store and mail order goods in cash, there is a vast field for the reductions in time now allowed.

It takes REAL BACKBONE on the dealer's part, but it pays handsomely.

There are a great many firms successfully doing credit businesses, but they keep a strict watch on all credits. Some time ago I read an interesting article in Hardware and Metal in which a writer stated that in the merchandising of goods there are three important stages—buying—selling and collecting of accounts.

There are three important stages of retail merchandising. In the first place there is the buying—for goods must be well bought. In the second place there is the selling—for no matter how well goods are bought there must be a proportionately good sale, a sale where there is a profit and a satisfied customer too. In the third place there is the collecting—for goods that are not paid for are not well sold. The trouble with many merchants is that they pay little attention to the collecting as a factor in the sale. They buy at a certain figure and they sell at a certain figure, and they estimate the proportionate overhead expense; and they then think that they have arrived at a basis of profit. But if the collected price is not equal to the selling price, plus interest and expense of collection, then that selling price cannot be figured as a basis of profit.

Accepting then that the sale is not completed until the retailer has received the actual cash it is on this basis that the merchant must buy. In other words he must make allowance between his buying and selling prices for the cost of collection, for the bad accounts and also he is entitled to make allowance for interest on the outstanding accounts until they are collected as it is only then that he has realized his selling price.

If the merchant carries say an average of ten thousand dollars on his books for a year he should make allowance for this in his buying and selling; his credit business is costing him good interest on this amount. Say at eight per cent. the merchant is paying $800 the year on his ten thousand dollars of accounts for the convenience and accommodation of his

(Continued on page 43.)

A Plea for the Retailer

Canada Has 250,000 Retailers—What Would Happen if They Were to be Suddenly Eliminated? Asks Writer—Thinks Government Should Have Consulted Experienced Retailers Before Purchasing War Supplies

By E. M. Trowern, Secretary, Dominion Board, Retail Merchants' Association.

IN addition to the many false statements that were often made on public platforms and in the press, in "Times of Peace," regarding the abolition of "Middlemen," they have now been served with an additional notice in "Times of War," by some representatives in the Dominion Government at Ottawa, to make their "Exit" or "Pass-out" as unworthy of recognition.

Those who have had practical training in commercial matters, and who have graduated from that great commercial school which is founded on human experience, and which is so little understood by the professional mind, but who have among their numbers the many Merchant Princes who have graduated with honors, through their own energy and ability, and whose names stand out in every city and town in the Dominion, as honorable and upright citizens and who are doing their share to make Canada known throughout the Empire, as the "Little Nation of Shop-keepers" is known throughout the world, wonder why this sudden charge against them has been made. Is it being done in order to direct the public mind away from the unbusinesslike methods of party politicians, or because it is thought that "Middlemen" still continue to exist as mere units, and they are so submissive and conscious of their guilt that they will not resent the many unfair and false statements that have been, and are now being made against them? If this is the intention of the attack, and the insinuation, we desire to have that removed at once.

Canada Has 250,000 Retailers

There are in Canada to-day over two hundred and fifty thousand loyal and honorable retail merchants, who, if they had an opportunity, and found it absolutely necessary, would shoulder their rifles and go out after the common enemy; and they would prove themselves worthy of their class. But owing to the fact that by so doing, and by locking up their stores the community would suffer untold hardships anl inconvenience, they are forced to "stick to business" and to guard Canada "in the market and shop."

Following the order of the natural channels of trade, we have the Producer or Manufacturer, the Wholesaler, and the Retailer; then comes the Consumer, who consists of the fourth turn in the channel. But the largest consumers are chiefly among the first three, as they are the classes who spend the most, and by so doing they keep the wheels of commerce turning.

Through false doctrines preached by day-dreaming theorists and persons who have had no commercial training, the idea has been created that products or manufactured articles should go direct from the producer to the consumer, and that by so doing they could be sold cheaper to the consumer. It is false doctrines of this sort that have brought about the suggestion that the "Middleman" must go. If the "Middleman" had not a place in the community, or if he is a "Parasite," as some ignorantly assume he is, he would have been swept away centuries ago. But going away back in history, back almost beyond tradition's very dawn—thousands of years before Romulus was suckled by the wolf, fifteen hundred years before Alexander rode in the splendor of his conquest from Macedonia to the gates of India, eighteen hundred years before the Wise Men of the East followed the resplendent star that paused to shine on the tiny Babe that lay in the rude manger of Bethlehem—and there we find on the eastern shores of the Mediterranean a great nation of traders—the Phoenicians—the first great nation of merchants of which history can boast any record.

If the Merchants Were Gone, What?

Take the merchants with their shops and their stocks, with their busy, bustling enterprise, out of the cities, towns and villages of Canada, and Canada might as well be removed from the map of British North America.

To every one dollar that Canada has invested in production or manufacturing, she has over **One Hundred Dollars** invested in distribution, so that any effort put forth to abolish the "Middleman" who is the distributor, would be inconceivable.

Our defence of the "Middleman," however, in this brief article is first to show that it is absurd to think of removing him; and secondly, to point out to some of our legislators and politicians the great amount of needless expense and time that might have been saved when the war broke out, if they had only stopped to consider what a great benefit these poor abused "Middlemen" might have been, and can be yet, in advising the Government, if it would be remembered that they have just as much love and interest for their country in which ninety-five per cent. have staked their all, as either the manufacturer, the farmer, the laboring man, the doctor, the lawyer, or any of the professional classes. It may seem unkind to state it, but ninety-nine out of one hundred business men in Canada, who have read the evidence that has been produced before the special commission believe that the unbusinesslike methods adopted by the Government, brought out in this investigation, will reflect as much upon them as it does on those "Political Pedlars" who have no established places of business, but who have been surrounding Ottawa begging for orders, having only one object in view, and which object most of them seem to have secured.

Probable Course of Procedure

We all realize the suddenness with which this fearful war enveloped us, and as business men we can see how helpless many of the Ministers were when what had to be done, had to be done quickly; we can see how easily they got bewildered in the quantity of articles that were required. But let us suppose, for example, that a Minister required ten thousand suits of clothes to be made at once. If he knew nothing about clothing, and with a large order in his mind, he would naturally think of a clothing manufacturer; possibly he would like to have them made in Canada, by a Canadian manufacturer, and he would quite likely consult with his deputy or some clerk in the service, or some political friend, who might not know any more about clothing than he did himself. He would be in a great hurry to do something. They would likely call in a manufacturer of cloth; perhaps a political friend or the first one whose address was at hand, and naturally any manufacturer who was approached would think that his goods were the best, and the operation would commence. Prices would be given for the cloth, and a second person would have to be brought in to give a price for making. Up to this point, the whole matter was in the hands of two people, the maker of the cloth and the maker of the suits, and they have a Minister or

(Continued on page 34.)

Cardwriting Made Easy

by R.T.D. Edwards

LESSON NO. 10

IN lesson No. 9 which appeared in this paper, I demonstrated how to use shading on square faced letters. I did so because the style of shading featured in lesson No. 9 was easier made, and better for the beginner, than the spurred Roman shown in the accompanying Chart No. 10, and described fully in this lesson. In this lesson I will also take up border ruling and corner designs, and also the mixing of shades.

The formation of the Roman alphabet and numerals was gone into and thoroughly explained in lessons 7 and 8 published in previous editions of this paper and by this time you should, if you have been diligent in practice, have no difficulty in making complete show cards with this style of type. The shading on this formation, being more difficult than in lesson No. 9, you should make an extra effort to master it.

There is one thing which should be impressed very thoroughly upon the beginner and that is the all importance of this branch of the show card work. Shading has been in vogue ever since show card writing has been recognized as a trade by itself, and is still just as necessary to know. There is no way that the plainness can be taken off a show card quicker than by the use of a shade. By its use a plain black and white card can be made to attract the prospective customer, when the plain card would be passed unnoticed. It has the effect of making the black letter stand in relief from the white background.

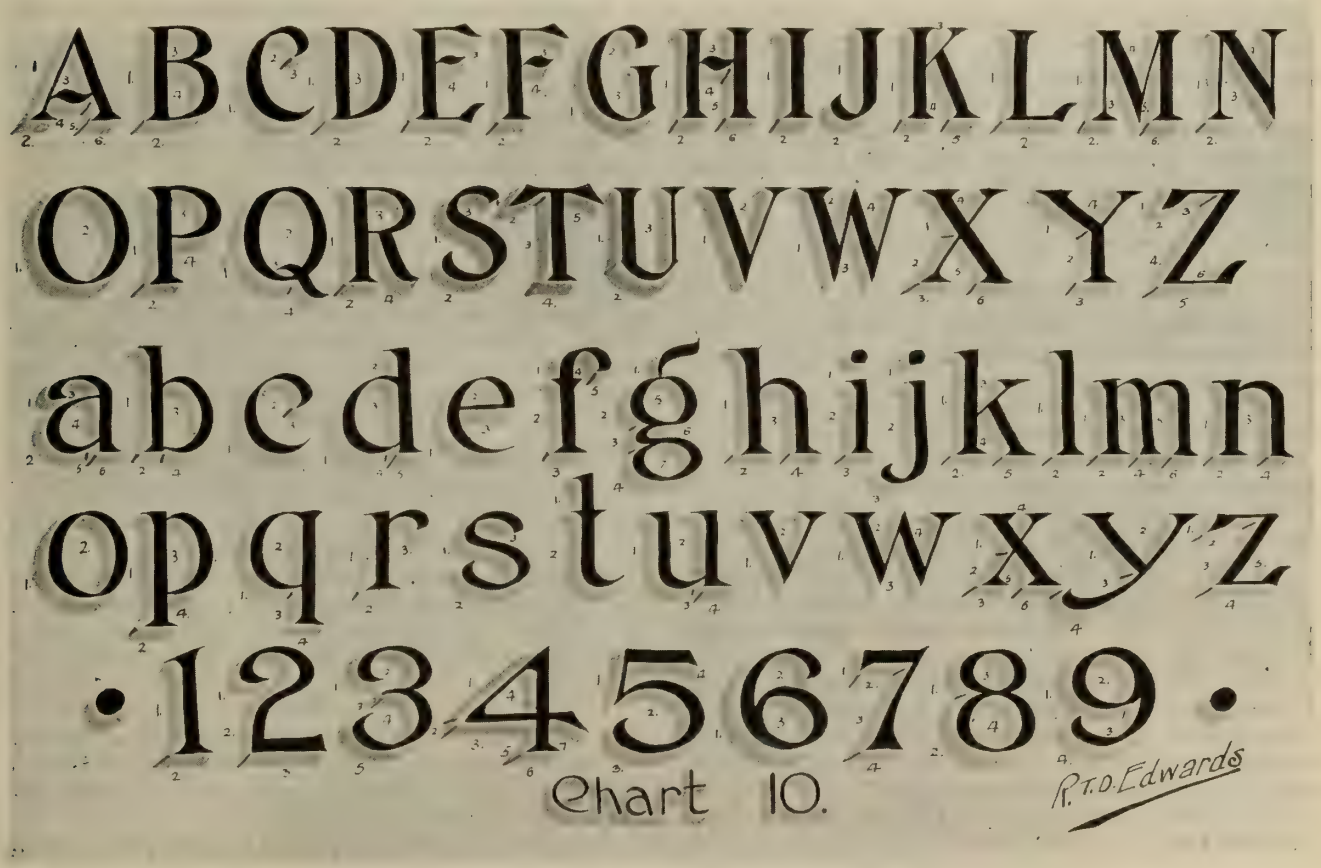
THE CHART—UPPER CASE

The shadow on the letter "A" is composed of five complete strokes. Stroke 3 will be found to be the most difficult one. At the finish of this stroke it is necessary to turn the handle of the brush to the left in order to get it to meet the cross bar of the letter squarely.

B's shadow is made with four strokes of the brush. Curve strokes 3 and 4 are made with the same movement.

Shade stroke 1 of C is found on many other letters and needs much practice. This must be made quickly to get a smooth stroke.

Shade stroke 1 of "D" is made more frequently than any other stroke. Note how often it appears through the chart. This should be made often until perfected.



The shade necessary for the "E" and "F" is composed of four strokes for each letter. Stroke 4 is a small one but must be kept parallel with the centre stroke of the letter.

It is absolutely imperative not to allow the shade to touch the letter. The curve finish of stroke 2 of G is made by lifting the brush while turning the curve.

The letter "H" is composed of six shade strokes. Stroke 4 is similar to those on "E" and "F."

The finish of the shade stroke 1 of the letter "J" is made by turning the brush to the left and finishing the stroke off square.

Shade stroke 3 of K you will find the most difficult on this letter. It is necessary to turn the brush to the left, and when lifting it turn downwards to get into the angle of the letter.

The shade of the letter "L" is quite simple as compared with some of the other letters. However, much practice is needed in these strokes especially No. 2.

The letters "M" and "N" are difficult letters to shade. It is the angles on the ends of strokes 3, 4 and 5 which cause the beginner much trouble. On stroke 4 the brush must be drawn down with the full width until the narrow part is reached. The angles are filled in by turning the right hand side of the brush downward. Strokes 3 and 5 start off with a fine stroke and are made the reverse of stroke 4.

The letter "O" shade is simply two quick curved strokes.

The pointed effect of shade stroke 4 of "P" is made by lifting the lower side of the brush first.

Stroke 2 of "Q" unlike that of "O" must be finished square.

Shade strokes 4 of "R" and 1 of "S" need a great deal of attention.

Stroke 2 of "T" is narrower than the rest of this letter. It is made with the side of the brush.

The letter "U" has three shade strokes and they all need much practice.

The "V" and "W" shadows are much the same as those of "M" and "N." The same principle that applies to the latter should be used for the former.

Shade stroke 1 and 5 of "X" should appear as one continuous stroke, as should 4 and 2 of the same letter.

Stroke 4 of the letters "X" and "Y" are to be made the same as stroke 3 of "K."

The peculiar formation of "Z" makes its shading difficult. This letter needs much attention.

Lower Case.

If you accomplish the shading on the upper case lettering before attempting the lower case work the latter will be easier.

All six strokes of "A" require a lot of practice as do the four strokes of the letter "B."

Strokes 2 and 3 of letter "C" can be made with one stroke of the brush, with practice.

The shade stroke 3 of "D" needs a lot of attention in order to get the curved beginning correctly.

All the shade strokes of "E" have appeared in previous shadows and should now be made easily.

Stroke 4 of "F" should be made many times in order to get the right curve.

"G." The shadow on this letter is all curves. Hours of practice on these alone is not too much. Stroke 3 of the shadow of "H" is often made in two strokes, but for the purpose of getting speed in the work it is best to make it without having to lift the brush.

The shadow on the dots of "I" and "J" may seem small but need to be made correctly.

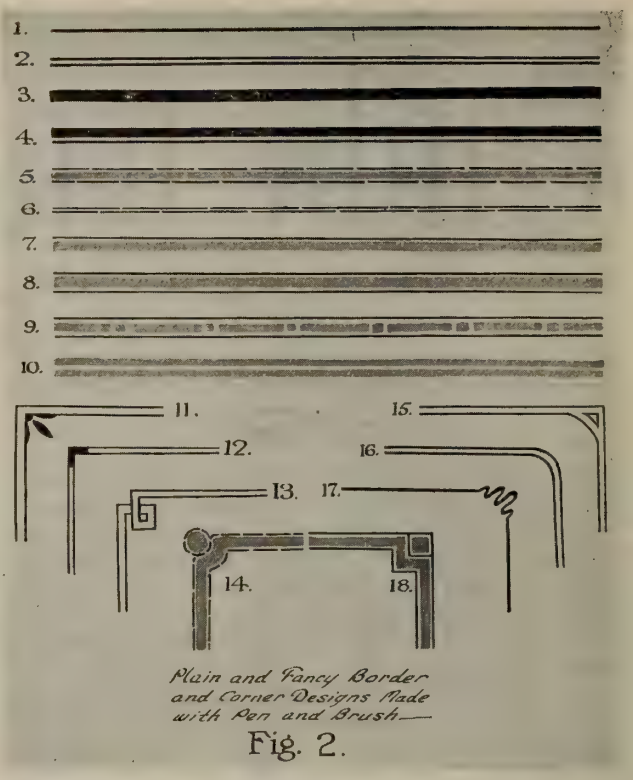


Fig. 2.

Chart showing various styles of borders and corner pieces

The shade on the lower case "K" is the same as that on the upper case.

The shade stroke 3 and 5 of "M" and 3 of "N" are made the same as stroke 3 of "H." Just one stroke of the brush.

The "O" and "P" shadow is the same foundation as the upper case letter.

Shade stroke 2 of "Q" is of similar formation to that of 3 of the lower case "D."

Stroke 3 of "R" is one that needs frequent practice.

The shade of the "S" is the same as the upper case.

Stroke 2 of letter "T," and 1 of letter "U," are both the same and it is quite important to have them made gracefully. Practice these often.

The V, W, X and Z shadings are all the same as the upper case lettering but don't be afraid to practise them again.

Stroke 4 of the "Y" is the only one in the alphabet, and for this reason it needs a lot of hard practice.

All the lines composed in the shading the figures are used in some way or other in shading the letter so they do not need to be gone into separately. It is enough to say that each time you practise a stroke, no matter how often you have done it before, will do you the world of good both for shading and letter formation because the majority of strokes go hand in hand.

How to Keep Brushes.

It is impossible to make this class of shading unless you keep the brush flat pointed at all times. There should be no going over the work two or three times. Every stroke should be made with one sweep of the brush.

Shade Mixing

I will name a few shades which are used extensively for shading purposes. These added with the greys taken up in lesson No. 9 will give you a good assortment for some time to come.

Pale green is mixed by putting a small portion from

your regular green colors into about 8 or 10 times as much white. Mix thoroughly and add either pigments until desired shade is reached. Pale green has always been a favorite for shading or line ruling.

Pale Blue is mixed similar to the green except that the blue is used to color the white. If ultramarine blue is used care must be taken not to add too much as this color is very strong.

Flesh shade is made by mixing a small quantity of yellow and red into a larger quantity of white.

A mixture of a small quantity of yellow in white makes a cream that can be used for lettering or ruling on dark cardboard.

When brown tones are used on a card, a shade mixed from small quantities of red, yellow or black mixed in white. Use white until a light shade of brown is produced.

To get a violet shade mix a small portion of blue and red in a much larger quantity of white. This is an excellent shade for ruling and scrolling on white card.

Mix all these shades thoroughly. A small quantity of each shade should made and kept moist and covered in a small screw top jar.

Border Ruling

Among the many branches of show card work, ruling borders both plain and fancy is one of great importance.

You must learn to do this work quickly and accurately.

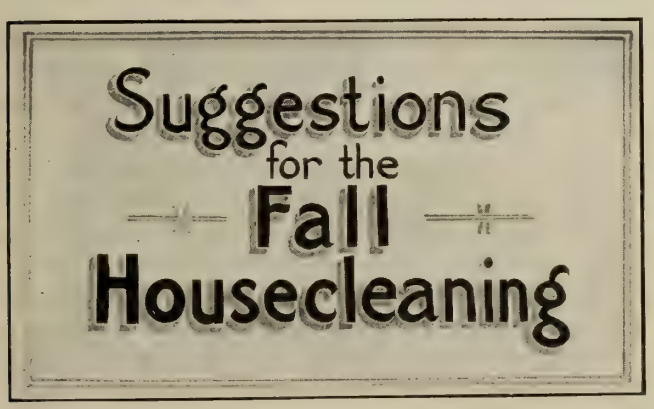
Use a ruler about 24 inches in length. It must be absolutely straight. There is a heavy one in use with a heavy brass edge riveted on that is an exceptionally good one for cardwriting purposes. Always mark out the border first with pencil.

When making the border with pen or brush use the edge of the ruler that does not rest on the card. Both sides can be used by turning the ruler over. A smudge is almost sure to result if you attempt to border with the side of the ruler that rests flat upon the surface of the card.

Various Styles of Borders

Border No. 1 is made with a stub pen. This is the most used of all borders. No. 2, is double pen border. It is absolutely necessary that the lines run parallel.

No. 3 is made with a No. 6 red sable writer brush. No. 4 is a combination of the pen and brush. No. 5 shows a



Suggestion for Seasonable Card

grey centre with a broken pen line on either side of it. This style is quickly made and is quite effective. Any color can be used for the centre.

No. 6 shows the double broken pen line border.

No. 7 is a pen and brush combination. No. 8 has the pen border on both sides of the shade line.

No. 9 shows a broken centre brush line with the straight pen line on both sides. No. 10 is the double brush line.

Below the border designs are corner pieces which can be used with the borders, as the accompanying card illustrates.

Corner piece No. 11 is made entirely with the pen. The conventional corner design is simply outlined and filled in. This can be used with border No. 2.

No. 12 is even simpler than No. 11. It is also made with the pen and can be used with border No. 2. No. 13 is a little more difficult and must be done more carefully. Similar designs to this were used in the old school drawing books. No. 15 and 16 shows pen corner pieces which can be used with No. 2 border and which are quite simple to execute.

No. 17 is also quite simple to make. It is just as quickly made with a wavy stroke across the corner to join up the two ends of the border lines.

Nos. 14 and 18 show a little more difficult part of the work, but with care can be made accurately. No. 14 can be used in conjunction with border No. 5 and No. 18 with border No. 8.

Other branches of show card writing will be taken up in Lesson No. 11 to appear later in this paper.

WALL STREET'S RAKE-OFF

THE total transactions of the New York Stock Exchange for five days this week have exceeded 7,000,000 shares. This means $1,750,000 in brokers' commissions.

All this money comes out of the pockets of customers, and there is naturally no disposition on the part of members of the Stock Exchange to check the frenzy of stock-gambling. Neither is there a disposition on the part of the governors to inquire too closely into the character of some of the stocks that are dealt in.

The game is wide open, the sky is the limit and everything goes.

Already sensational stories are everywhere in circulation in regard to fortunes that have been achieved by pyramiding shoe-strings. It is the same sort of talk that the tourist at Monte Carlo used to hear morning, noon and night, and the kind of prosperity that was dinned into his ears there had the same basis as this new Wall Street prosperity.

After the lean years, Wall Street's hands are again full of fat and it is making the most of its opportunities.

The general economic effect of this stock-gambling debauch can only be bad. A speculative public is not buying legitimate securities for investment. It is buying "war brides" and "war babies" in the naive belief that it can get rich quick in beating Wall Street at its own game.

The day of reckoning will come, of course. The bottom will drop out of a crooked market. There will be much bleating among the lambs that have been trimmed. Defaulting cashiers and faithless clerks will make the kind of atonement that defaulting cashiers and faithless clerks usually make in such circumstances. Amateur speculators will think longingly of the savings-bank books that they once possessed. The Stock Exchange will come in for another period of investigation, with the demand for Government regulation, and attorneys for the Exchange will issue eloquent statements explaining how the business of the country could not be carried on without an open gambling market for securities

Two confidence men in one of O'Henry's stories scrupulously refused to work New York because they did not regard it as sportsmanlike. To them it was like dynamiting bass in a Texas lake. Wall Street is not much concerned about sportsmanship these days. Its motto is the motto of the father of Mr. Dooley's parlor Socialist —"Get th' goods."—N.Y. World.

HARDWARE & METAL

CANADA'S ONLY WEEKLY HARDWARE PAPER

Vol. XXVII. TORONTO, OCTOBER 9, 1915 No. 41

DOES PARCEL POST PAY?

IN A RECENT issue of a Toronto daily paper an item referring to Canada's Parcel Post system appeared as follows:

"People have no idea how easily and cheaply parcels can be sent by parcel post in Canada," said C. Gleeson, of Winnipeg, who has practically the jurisdiction of the whole parcel post system from Ottawa to Dawson City.

"The department stores are about the only institutions that are really making a thorough use of the system, and they do so because it pays." Mr. Gleeson stated that the small parcels from 8 pounds down were most frequently sent. The maximum limit is 11 pounds in size up to 2 feet 8 inches by 3 feet 6 inches.

Here is an admission from the Post Office officials that the Parcel Post system is a failure. Last year the then Postmaster-General, L. P. Pelletier, in arguing for increased revenue for his department, stated that the Parcel Post was not yet paying its way.

The Bill establishing it was forced through Parliament after many set-backs; the fight extending over a number of years. It was strongly opposed by the business press of the country which showed that it was of value only to a few big stores in Montreal, Toronto and Winnipeg, and that it would build up these cities at the expense of the other centres and particularly the small towns and villages, which are so essential to satisfactory rural conditions. The Post Office officials and others promoting the Bill finally overcame the opposition by representing that under the zone system the proposed Parcel Post system would be of no value to the big departmental stores; that it was really in the interests of the smaller cities and towns.

The Bill was based on one adopted by the United States, but neither there or here has the zone system been found of value to the public at large. Instead, the big mail order houses send their goods and catalogues by express to Post Offices in zone centres from where they are distributed at a lower rate than the efficiently managed express companies can afford to carry them. It is apparently not paying in the States. A representative of one of the largest mail order houses in Chicago volunteered the information recently that the system was a great advantage to them, but some day the country would employ a good cost accountant who would discover that the business was being done at a heavy loss; that the country was paying much more to carry the parcels than they received from the shippers.

The present Parcel Post system is clearly transferring the business of centres to a few big cities, and if this business is being done at a loss, it is up to the Government and M.P.'s outside the big cities to deal with this matter. If these are the facts, as they undoubtedly are, in these times of heavy and increasing taxation, it would be a great public economy to abandon the present Parcel Post system entirely and establish one on a self-sustaining basis.

VALUE OF SMALL CENTRES

THE VALUE of the smaller centres to the farming population of the country is often overlooked. The fearful loneliness of farm life in new districts in Western Canada where villages with their churches, schools, stores and halls for entertainment, have not sprung up, is clearly depicted in a story recently published in London by that clever Scottish authoress, Miss Macnaughton. The story of rural England, with its numerous cases of insanity and murder, due to isolation, are ample confirmation of this. Europeans often build their homes in the villages and go out each day to work on their farms. In Canada the weekly visit to the town store, to the church, or to bring the children to and from the High School, brings a change that makes farm life, on which our future so much depends, worth living. The fact that it is the local business man who is the main support of these public institutions must not be overlooked. Such profits he makes are expended chiefly in this way. His taxation goes entirely to local objects. He is therefore entitled to all the support that can be given in assisting him to develop the community in which his business is located. Conducting a public utility, like the Parcel Post system in such a manner, that the large mail order houses are the chief bene-

ficiaries will prove disastrous to the rural communities upon which Canada, as a nation, is largely dependent.

NET PROFITS COUNT

EVERY time a merchant is tempted to make a sale at a cut price he should remember that it is the net profit that counts, not the total sales. The business exists solely for the profit it makes. If it makes no profit it is not a success. The merchant's business can grow only by making a profit. Every new thing that comes into the store must be paid for out of the profit. Every dollar you take out of your store outside of your salary must come out of the profit. Otherwise you will meet trouble sooner or later.

"It is the net profit that counts, not the total sales." Every sale made at a loss takes away that much profit from a profitable sale. Every sale made at cost means that much opportunity for making a profit gone. Every sale made at a profit adds that much to your other profits. If you don't get the profit, how can you ever have it? If you don't ask a profit, how can you ever get it? Better small sales with some profit than large sales with no profit. Make your sales as big as you can, but always make the profit just as big in proportion.

THE BUSINESS OUTLOOK

THE ADVENT of fall and the good news from the war zone during the early part of the week have had a decidedly beneficial effect on trade generally. Fall hardware lines are moving in a very satisfactory manner and retailers are buying a little more freely than formerly. There is a hesitancy in placing orders for future delivery on some lines, owing to uncertainty regarding future prices. The recent cool weather has stimulated the demand for small heaters. Other lines of stoves, with the exception perhaps of furnaces are moving satisfactorily. Retailers stocks are still very low, due to the hand-to-mouth buying policy which has been carried on for many months past. The steel trade in Canada is now in a prosperous condition, as shown in the annual statements of some of the steel companies recently issued. The steel plants continue working to capacity on bars and forgings for shells, there being practically no limit to the demand. The merchant bar business has improved to some extent, but the demand for structural shapes is still very light.

The successful termination of the Anglo-French loan negotiations in New York and the rise in sterling exchange to a more normal basis is expected to have a beneficial effect on the metal market. There has been, however, up to the present, no marked improvement. Reports from Western Canada indicate that there is a marked improvement of late in all branches of the hardware trade. A more optimistic feeling exists at the present time than at any time since the outbreak of the war, more than a year ago. Referring to the business outlook in the United States, one of the Republic's large banks in its monthly review of business, just issued, states that evidences of permanent betterment in business are multiplying so rapidly that mere hope has given way to a conviction that the next twelve months will witness a very real prosperity and one which need not be synonymous with inflation. What remnants still remain of the spirit of ultra-conservatism in business may be ascribed to the psychological effect of war news. The letter states:

"True, dissensions arising from conflict of policy of this and European Governments are ever present, and with the continuation of the war, likely to remain so. But American industry has arrived at a point where general expansion must naturally follow liquidation of the past three years. The favorite speculation as to what might happen were the war to end suddenly has been replaced by a more widespread belief that even in that eventuality there would still remain the bigger opportunities of the reconstruction period which would naturally follow."

SHOWCARD WRITING

IN THIS issue appears lesson No. 10 of a series on showcard writing prepared for Hardware and Metal by R. T. D. Edwards. The value of showcards for assisting in attracting attention and creating sales cannot be over-emphasized. In the large stores, and in a fair percentage of the smaller ones, showcards are used extensively. There is, however, a tendency on the part of some merchants to overlook the importance of showcards. A man who has made a close study of retail conditions, in a recent address, stated as follows:

"I find a large number of small advertisers seem to be overlooking the merits of interior and show window cards. Very often you will see sales advertised in newspapers in spread-eagle style, yet you will find by visiting the store advertising in this manner that things are going along, both inside and out, just the same and with no more enthusiasm or action than if nothing unusual had been advertised. The use of attractive showcards catches the customer's eye who may or may not have read the newspaper advertisement. Customers responding to advertised sales are frequently compelled to cross-examine clerks in order to learn what should have been on display cards in a conspicuous place. The card in front of the prospective purchaser is a powerful reminder at the psychological moment."

MANY IMPORTANT price changes are announced in the weekly market reports from buying centres, which appear elsewhere in this issue. For many months past, important price changes have taken place almost every week.

A PLEA FOR THE RETAILER

(Continued from page 28.)

his deputy or some other official who are inexperienced in the clothing business to deal with.

If the sun takes the color out of the cloth, if the lining drops below the material, or if it shrinks after the first shower of rain, who should the blame be placed upon? It should be placed upon the inexperienced Government ministers, or the men who undertook to enter into a contract about which they knew nothing. If business men were asked to enter into a similar contract, they would first find out a capable well-posted "Middleman," one who has a well-known reputation and an established business, and one who knows the quality of goods that every manufacturer makes; one who would know the makers of good cloth and those who make goods for the cheap bargain trade, as well as those who know how suits should be made. By doing this there would be someone to put the responsibility on, and someone to check up any manufacturer who might be tempted to take an unfair advantage.

The Experienced Retailer Knows

This same plan could and should be followed in all Government purchases: boots, optical goods, automobiles, etc., and it is the only plan to insure good and proper value. But some prejudiced minds might say: "Oh! I see, you want to give those 'Middlemen' a chance to make something!" Our answer is: "Who can tell you about the quality of any article but the man who is skilled by experience in handling all lines of that article?" A grocer can tell nothing about gold, jewelry, or good quality silver-ware. A jeweler knows nothing about the quality of soap; and while there are only a few brands of what might be termed good soap in Canada, if the Government approached all of the soap manufacturers, they might all say that theirs was the best. But the skilled grocer knows, and he can tell you, and the manufacturers know that a skilled grocer knows what he is talking about. To still more strongly impress the importance of this argument, we ask you, if you are not a merchant tailor, to try to guess what make of cloth your clothes are made out of, and likely you have been wearing clothes for many years, but unless you are experienced you will be sure to guess wrong.

The merchant tailor who knows his business can tell you, because he has learned his business. Outside of the particular business that we have learned, we know very little, and this applies to Major Generals as well as to Cabinet Ministers, and to all others. The middleman who desires to build up his business and to keep his name over his door untarnished, and who has a knowledge of the quality and make of goods in his line, stands between the manufacturer and the consumer, and in his own self-interest would naturally see that his customer got the best value, and the best make for the price that was paid.

Customer's Interest Comes First

The great majority of retailers or "Middlemen" as they are called, have no financial interest in any manufacturing concern. They gather the products of the various manufacturers together, and this gives them an opportunity to make comparisons and to find out what their customers say about certain lines that they buy, and if the experience of the customer proves that certain lines do not wear well, they discontinue handling these lines.

With an intelligent retailer the customer's interest is his first consideration, as the only way in which he can increase his business is by having satisfied customers, and those who will continue to give the merchant his patronage.

The "Middleman" is therefore not only necessary, but essential, and his services can never be dispensed with.

MASTER CUTLER ACKNOWLEDGES RECEIPT OF RAZORS—STATES NEED IS STILL GREAT

Canadians have responded nobly to the appeal for old or spare razors, for the use of troops at the front. To date over 20,000 razors have been forwarded to England. An effort is being made to make a total of 25,000. It is felt that if every hardwareman would send in his collection without delay, a total of 25,000 would be reached in a week's time. The following letter from the Master Cutler, Sheffield, in which he acknowledges receipt of the first consignment of razors has been received by Mr. T. B. Lee. The letter reads as follows:

Cutler's Hall,
Sheffield, Sept. 21st, 1915.

Thomas B. Lee, Esq.,
Toronto.

Dear Sir:—

I have been much gratified to hear of the success of your effort in collecting razors for the Troops mentioned in your letters of August 12th, 26th and Sept. 3rd, and on the arrival at Liverpool of the 4,500 I telegraphed you congratulating you.

I have delayed writing until now expecting the first consignment to arrive here any day, but various delays have been caused, which is quite natural at the present time, and I have received them the last two days.

They are certainly a very fine lot of razors, and your many friends have been most generous in parting with them.

The most of them are in such good condition that very little will need to be done to them in order for sending forward, and most of them will be in the hands of the War Office within the next week.

I am daily expecting the arrival of the second consignment of 5,500, and which are probably already on the way.

I felt sure that when you first brought the matter to my notice that Canada generally would respond generously to the Appeal if the opportunity was given them, and I do heartily congratulate you on being the sender of the largest number of razors received from one source.

For your information, the razors already received from other sources amount to 123,000, in addition to which there are the 5,500 from yourself not yet to hand, and we have already put in good condition and sent forward to the War Office for the Troops 80,000.

There is such a very strong feeling of gratitude existing between Britain and Canada in connection with the response of both men and munitions that I am sure they will be pleased to recognize this valuable effort.

I am remaining in office of Master Cutler for a second year, and as the demand for Razors is still very great, I am continuing the collection, and hope that I may still have some future assistance from yourself.

With most grateful thanks for your efforts,

Yours faithfully,

(Sgd.) W. H. Ellis, Master Cutler.

Hardwaremen will note in the letter that the demand for razors is still very great.

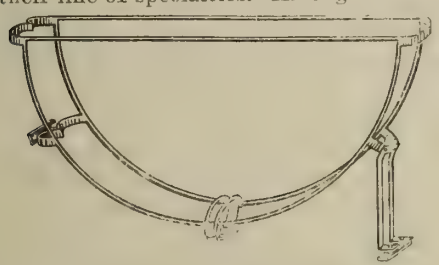
Every hardwareman can "do his bit" to relieve the situation by forwarding his collection (small or large) without delay. Kindly forward razors addressed to Thos. B. Lee, 30 Front St. E., Toronto.

New Hardware Goods

Offered Canadian Hardwaremen

TIRE HOLDERS

The McKinnon Dash Company of St. Catharines, Ont., and Buffalo, N.Y., are adding several new auto accessories to their line of specialties. Among them are



McKinnon Tire Holder

two tire holders for Ford cars—one for a single tire, the other for two tires.

They are made of steel electrically welded—light, yet strong and durable. Their Japan finish carefully baked on makes them bright and attractive. They can be easily and quickly attached to the running board and fender at the left of the front seat where the tires will be kept cool and clean—well away from heat, dirt and oil. They hold the tire securely with no "side sway" to loosen the fender or running board.

They have a simple locking device to prevent theft. They can be used for smooth or non-skid tires, with or without covers, and detachable rims.

The company has also produced the new McKinnon Storage Stands for automobiles. They are made in two sizes; one for large cars and one for smaller cars, such as Fords, etc. They are designed to be placed outside of the wheels, so that the hub will rest securely in the pocket at the top of the stand. They

McKinnon Storage Stand

are claimed to be better than jacks for they won't tip over, the base being 7 in. x 8 in. Made of steel electrically welded, they are light yet exceedingly strong. They are guaranteed to hold any car weighing up to 8,000 pounds.

No. 50 is 15¼ in. high, and a set of four weighs 10¼ lbs. The larger size, their No. 60, is 17 in. high, and weighs 11 lbs. per set. They nest nicely for shipment, and a good stock of them can be carried in a small space. They are finished in black japan carefully baked on, making them very resistant to rust. Complete details will be mailed upon request.

SCREWDRIVER DISPLAY

The Peck, Stow & Wilcox Company, Southington, Conn., is now offering to

Peck Stow & Wilcox Screw Driver Display Rack

the retail hardware trade a screwdriver display rack.

This selling aid is designed to show to advantage Pexto Solbar screwdrivers, a solid bar tool that stands up under hard usage, and has a bearing surface that prevents the hand from slipping.

The fixture is of handy size, 9 x 12 inches, and made to stand or hang. It is constructed of metal and enameled in colors, orange, blue and white, the lettering being in black. The tools are arranged on the rack to show the different talking points. A spring-clip ledge holds the screwdrivers firmly in place. These display racks usually are first used in the window, after which they are hung up or stood on the counter inside the store.

ANGLO-AMERICAN COUNTER DISPLAY

The Anglo-American Company, Pittsburg, Pa., are offering to the trade an attractive display shield, containing an assortment of insulated flashlights.

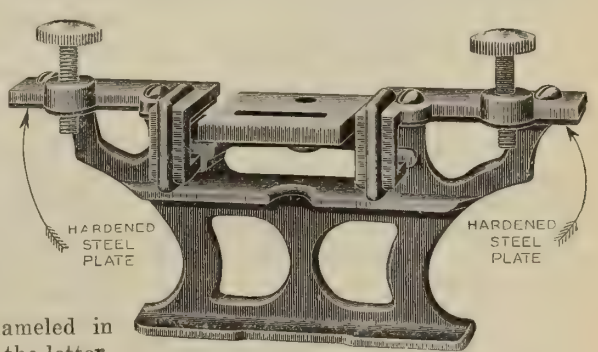
The shield is lithographed in three colors, and is fitted with a strong easel back. The assortment of flashlights contain six popular selling sizes.

Assortment "A" contains ten complete flashlights, with batteries and a battery tester. Assortment "B" consists of fourteen complete flashlights, with batteries, eleven extra batteries and two display shields, one for window and one for counter.

Complete details can be had from the Anglo-American Co., Pittsburgh, Pa.

IMPROVED SAW TOOL

The Simonds Canada Saw Company, Montreal, offers to the trade a new saw tool called the Simonds Crescent Saw Tool. The makers claim that the difficulty with some saw tools is that the hard teeth of a saw rubbing across it will cut into the softer metal of the casting. It is said that it soon alters the rather exact adjustment which governs the amount of filing to be done on each tooth or raker in a cross-cut saw, and consequently the best filing results are not obtained. The improved Crescent saw tool is now fitted with a hard steel



Simonds Crescent Saw Tool.

plate, against which the teeth of the saw rub. It is claimed that this prevents the teeth from cutting into the plate and altering the adjustment. The makers state that expert filers greatly appreciate this feature.

Events in the Trade

Readers are requested to send in, for publication on this page, news items of interest to the trade.

Personal

W. L. Helliwell, of Winnipeg, manager of the Gurney North-West Foundry Co., was in Toronto during the week on business.

W. C. Jackson, who has been connected with the Hobbs Hardware Co., of London, Ont., for a number of years, has joined the staff of Brandram-Henderson, and will commence his duties on the road within the next few days.

Friends of Joseph Bradley, manager of the Canada Paint Company at Red Mill, Que., will extend sympathy in the death of his eight-year-old son, who was killed, as the result of being struck by an automobile, on Volontaire Street, Three Rivers, on Monday evening.

Business Changes

Fort William, Ont.—Estate of Hallenberg Bros., hardware and furniture, has been sold to P. Galinet.

Carberry, Man.—Estate of B. McCormick, hardware, has been sold to Harvey & Nash.

New Firms

Walkerville, Ont.—A. Long, who was with the Walkerville Hardware Co. for fourteen years as purchasing agent, has formed a partnership with Ald. Herbert Wilson, of Windsor, and will open a hardware and mill supply house in the new Oddfellows' Temple. They expect to open up about October 20.

Open Calgary Branch

Calgary, Ont.—D. Ackland & Son, Winnipeg, manufacturers and wholesalers of carriage hardware, are opening a branch here at 720 11th avenue, west. A new three-storey building 50 x 80 is under construction, and is expected to be ready for occupation about the middle of the month.

Winnipeg Notes

J. C. Craig and L. C. Marr, of the Miller Morse Hardware Co., returned on Saturday from a trip through the three prairie provinces.

Jas. Ogden, who for several years has been in the employ of L. Naismith, of Morse, Sask., has taken over Mr. Naismith's business, and will conduct it in future.

Ontario Incorporations

Standard Toys, capitalized at $40,000, head office Toronto, to manufacture and deal in toys, etc.

Norfolk & Rochester Hardware Co., capitalized $40,000, head office Haileybury, to carry on in all its branches the business of hardware merchants, both retail and wholesale.

The Capital Electric Company, Limited, has been incorporated with a capital stock of $40,000, head office Ottawa,

Industrial Notes

Windsor, Ont.—The Kelsey Wheel Co. will make an extension to their factory at a cost of $10,000. Wells & Gray, of Windsor, are the general contractors.

Collingwood, Ont.—The Imperial Steel & Wire Co. will start operations at their plant early in October. Some delay has been experienced in connection with the contracts.

Dominion Steel Foundry Co.—An addition, 100 x 160 feet, to the main foundry building of the Dominion Steel Foundry Co., Hamilton, Ont., is nearing completion. The company has installed in this addition one 25-ton acid open-hearth furnace and one 30-ton Shaw electric 4-motor crane. The company has also installed a complete outfit for machining 3-inch British shrapnel shells and machinery for finishing 4.5 howitzer shells.

Dominion Incorporations

Electro Zinc Company, capitalized at $24,000, head office, Sherbrooke, Que., to own and operate mines, smelters, etc., and to deal in ores, metals, etc.

Specialty Paper Bag Co., capitalized at $100,000, head office Toronto, to manufacture jute, cotton, paper and all kinds of bags and containers.

The Sorel Steel Foundries Company, capitalized at $100,000, head office, Sorel, Que., to take over the business now carried on at the City of Sorel by Beauchemin & Fils, and to carry on the business of iron smelters and brass and steel founders, etc.

Dominion Brake Shoe and Foundry Co., capitalized at $200,000, head office St. Thomas, to manufacture all kinds of brake shoes.

Canadian Duplex Steam Trap Company, capitalized at $40,000, head office, Walkerville, Ont., to manufacture, buy, sell and otherwise deal in steam traps, iron, steel and other metal goods generally.

Chevrolet Motor Co. of Canada, capitalized at $500,000, head office Toronto, to manufacture automobiles, etc.

Montreal Engine Packing Company, capitalized at $20,000, head office Montreal, to manufacture, import and export preparations and articles made of asbestos and other materials, belting, mill supplies, etc., and to take over as a going concern the business of the Montreal Engine Packing Co., Montreal.

Retail Merchants Organize

Neepawa, Man.—At a meeting held recently at this place, a local branch of the Retail Merchants' Association was formed. W. E. N. King, hardware merchant, was appointed secretary, and J. C. Card as president.

Obituary

Sunderland, Ont.—The death occurred recently of Robt. Charter, hardware and furniture merchant.

Toronto, Ont.—After an illness of two weeks' duration, George Gouinlock, for thirty years treasurer of the Toronto Hardware Co., died at his home, 165 Jameson Avenue. Deceased was in his 83rd year. The late Mr. Gouinlock was born near Seaforth, Ont., where he resided until thirty years ago, having been connected with the salt mines there for some time.

Convention Postponed

The convention of the Brandram-Henderson sales staff has been postponed from the 13th and 14th of October to the following week. October 26 and 27 are the dates set for the convention at Toronto.

Joins the Colors

Regina, Sask.—James McGeorge, who was connected with Messrs. Peart Bros., hardware merchants of this place for some time, was presented with a wrist watch on the occasion of his leaving their employ to join the colors.

Trade Inquiries

The Department of Trade and Commerce has received the following inquiries relating to Canadian trade. Addresses may be secured from the Department, or from the Editor, Hardware and Metal, Toronto, Canada. Please quote reference number when requesting addresses.

1066. **Toys, dolls, etc.**—An English firm desires to communicate with Canadian firms in a position to supply them with leading novelties in toys, dolls, etc., suitable for the coming Christmas season. They do a cash trade and are open to take up an agency for Canadian goods. Illustrated catalogues with prices are desired.

1067. **Enamelledware.**—A firm of hardware merchants in the south of England desires to get into communication with Canadian manufacturers of enamelledware.

1068. **Bentwood chairs.**—A Midlands firm asks to be placed in touch with Canadian manufacturers of bentwood chairs.

1071. **Ironmongers' supplies.**—A British firm inquires for bolts and nuts, wire nails and screws. Quotations c.i.f. Liverpool.

1073. **Hardware and wood handles.**—An English firm is open to purchase all kinds of hardware on a cash basis. Catalogues should be sent and prices must be delivered Birmingham. They also desire to get into communication with Canadian exporters of wood handles.

1074. **Household utensils, ironmongery, wooden handles.**—A British firm would like to hear from manufacturers of the following articles: All kinds for domestic use made of wood, tin or iron; mechanics hand tools; wire nails; nuts and bolts; wooden handles. Prices should be delivered Birmingham.

1075. **Ironmonger's supplies.**—A firm in England is in the market for the following: stamped steel butts, stamped steel blackflaps, bolts and nuts, wire nails, tower pincers, all kinds of plyers, washboards, all sorts of enamelware, tee hinges, all kinds of cycle goods, wrenches, cycle bells, hand bells and cycle pumps, etc. Prices must be delivered Birmingham.

1081. **Ironmongery, wooden handles.**—A firm in England inquires for all kinds of tools, wire nails, nuts and bolts, wire netting, etc. They are also in a position to purchase large quantities of miners' pick handles, manure folks, hay forks, etc., Prices must include delivery at Chesterfield.

1082. **Rope and string.**—A British firm is prepared to consider samples and prices c.i.f. Liverpool.

1084. **Brass rods.**—A British firm inquires for high-speed brass rods for military purposes. Full particulars required and prices should include delivery Birmingham.

1085. **Weaving wire.**—A firm in England is in the market for weaving wire.

1086. **Washers and rivets, fencing wire, brass and copper goods.**—A firm in Birmingham inquires for copper washers and rivets. Samples should be sent with prices delivered c.i.f. Birmingham. They are also in the market for galvanized wire netting for poultry runs, in rolls 50 yards by 1 yard. (Prices must include delivery, Liverpool) and brass and copper sheets and brass and copper wire. Full particulars and samples requested. Prices delivered Birmingham or Liverpool. The brass sheets should be polished one side. Size, 4 feet by 2 inches, 28 and 30 w.g.

1087. **Steel sheets.**—A British firm can buy large quantities of steel sheets, 30 inches by 21 inches, various thicknesses, nickelled one side.

1089. **Hemp, twine, etc.**—A British firm would like to hear from any Canadian firm in a position to offer hemp, jute and cotton twines, jute covered cords. Manila cords, plain and coloured Hessians and tarpaulins. Samples must be sent with prices delivered Liverpool or Bristol. State earliest delivery.

1090. **Wire nails.**—A firm in Birmingham submits the following specification. Canadian manufacturers please quote lowest prices and best export cash term c.i.f. Penang for:—

Four shipments at 250; 1,000 kegs best round wire nails with flat chequered heads, each keg to contain 45 pounds made up into 25 packets. Kegs to be made as large as possible and with iron hoops.

Sizes:	1½	2	2½	3	4	5	6 inches
Gauges:	12	10	9	7	6	5	3
	40	60	60	40	20	15	15-250 kegs

Please state earliest delivery first lot.

1092. **Accumulators, screws and bulls-eyes.**—A Birmingham firm is open to purchase 200,000 accumulators for pocket-flash lamps. They are also in a position to buy yearly 300,000 gross of brass and iron-wood screws principally ½-inch by 4-inch round heads (samples should be submitted; prices delivered Liverpool) and are prepared to place orders for large quantities of glass bulls-eyes for pocket-flash lamps.

1093. **Brass globe holders.**—A firm in England can place an order for one million brass electric globe holders. Quotations should include delivery Birmingham. (Samples can be seen at the Department of Trade and Commerce, Ottawa.

DO YOU THINK OF SAFETY?

When you leave your home for your day's work, do you remember that constant care is necessary? Do you, when you arrive at the office, factory, or shop, bear in mind your own safety and that of others? To think first of safety means consideration for others; it means lives spared and fewer vacant chairs.

Most accidents can be prevented, but what is each one of us doing to prevent accidents? We must not expect that care will be taken for our safety, and never take thought for that of another.

It is estimated that a man's average earning power is $700 per annum. Some of us receive more and some less, but whatever we earn each year will be reduced after a serious accident and will be stopped by death. What are you going to do about it? The obvious thing to do is to learn safety—to insist upon others doing their work in the safe way—to point out to the proper officials unsafe practices and unsafe machines—to take no chances. It may seem unnecessary to tell you this, but what of each year's toll of life and limb? Get the safety habit and pass it along as a heritage to the children.—Bulletin issued by Ontario Safety League.

CATALOGUES AND BOOKLETS

Beach Foundry Co. Stoves, Ranges and Furnace Catalogue

The Beach Foundry Co., Ottawa, Ont., has just issued catalogue No. 20, featuring the company's extensive line of Maple Leaf stoves, ranges and furnaces. The catalogue, consisting of 112 pages, is handsomely gotten up. The illustrations show up splendidly on coated paper. The cover is exceptionally attractive. A pocket has been provided in the inside back cover for holding the price list, which has also been attractively gotten up in book form. In addition to prices on stoves, ranges and furnaces, there are prices on all repair parts. One decidedly interesting feature in connection with the catalogue is a description of "how the Maple Leaf line is made." Six pages have been devoted to illustrate and describe the process of manufacture of the company's products. The illustrations reproduced in colors are very attractive. The description is interesting and educative.

Walkerton, Ont.—H. A. Havill, of this place, has sold his hardware business to Patterson Bros., of Chesley.

Weekly Market Reports

Statements From Buying Centres

The Markets at a Glance

MANY important and far-reaching price changes have gone into effect during the week. The advance predicted last week in bolts, cap screws, nuts, etc., has taken place. Other lines which have advanced during the week are iron and steel, including forged, refined, horse shoe and Norway iron and mild, sleigh shoe, tire, toe calk and high-speed steel. Lower quotations are in effect on some brands of galvanized sheets. Cotton rope has advanced 1 cent per pound. Following recent advances in the price of certain makes of guns and rifles, another maker has announced an advance. Poultry netting has been placed at 45% discount for spring delivery from Montreal, Toronto and London. Quite a number of other price changes and adjustments are referred to in the market reports from various buying centres. Attention in the paint trade is being focused upon the future situation of mixed paints. Some definite action will probably take place about the 1st of November and a price reduction would not be unexpected in some quarters. The metal markets are still quiet, but weakness is exhibited in some metals. Fall hardware lines are moving well and stove manufacturers report that business is fully up to expectations. Further details are reported this week regarding the many price changes which were announced in last week's report. The wet weather, fairly general throughout the three prairie provinces a week ago, caused a slight falling off in business, but with the advent of finer weather, there has been a noticeable improvement.

MONTREAL

MONTREAL, Oct. 7.—There is a further noticeable improvement in country trade. This covers both shelf and heavy hardware. In general lines there is an indication that the crop returns are having effect, and that there is a disposition to place orders more freely. However, it is still noticeable that the bulk of the buying is in staples rather than in luxuries. In heavy materials the demand has been accentuated by the late fall movement by water, there being good booking for the last boats. In the city, business continues dull. From Western Canada there are indirect reports through Eastern manufacturing concerns that there is a better spirit, and that buying has recommenced on a broader scale. However, it is expected that it will be some time before this improvement is important. Stove dealers report sustained activity, and particularly in heaters there is a marked improvement over a year ago. In paints the movement still drags, and there is evidence that the uncertainty of the price situation is a deterrent factor.

A number of important price changes have been announced covering some broad features of the market. Common iron has been advanced 10c, and there have been proportionate increases throughout the whole range of iron and steel, including forged refined, horse shoe and Norway iron and mild, sleigh shoe, tire, toe calk, and high-speed steel. Otherwise the metals have been comparatively quiet, although there has been an important reduction in zinc. Bolts and nuts are up about 5 per cent. through the entire range. Set and cap screws are on a new basis. Large pressed spikes have gone up 10c. Remington rifles are increased 10 per cent. through the range. Cotton rope has advanced 1c to a base of 23c, and there have been important increases in the prices of sash cord in sympathy. Poultry netting has been placed at 45 per cent. discount for the spring business. Prices on boiler tubes and plates are said to be subject to readjustment in the near future, and the paint trade is looking forward with interest to the announcement of zinc producers as to future prices, which will be an influence in the spring quotations on mixed lines.

Tin.—Although there has been no important change in local tin quotations, the tendency has been downward in sympathy with the London and New York markets. The situation generally continues dull, particularly for futures, and such have been the conditions recently as regards consuming interest that an American metal journal makes the remark that it would seem as though large users had gone out of business entirely. New York has dropped something over a cent during the week, and of the local figures of 41c to 42c the latter is more generally followed, and some business has shaded under it.

Spelter.—The situation in spelter shows little change, and the local quotation of 19c to 20c holds nominally, although it is reported that some business is being done slightly below. New York reports the situation as being quiet and quite steady, with little change in quotations; altogether prices are slightly lower than a week ago.

Lead.—The local market for lead at 6¼c to 6¾c remains steady and firm. New York shows small net changes for the week, although there was considerable strength shown at different periods. Second-hands are still getting better prices than being quoted by the Trust, and advances are being expected in some quarters. However, late reports indicate that there is a tendency in London to ease off on the advances which were made last week.

Copper.—On the favorable influence of the completion of the negotiations

MONTREAL QUOTATIONS.

Tin	41c-42c
Spelter	19c-20c
Copper	21½c
Lead	6¼c-6¾c
Antimony	35c
Solder, ½ x ½	25c-27c
Solder "strictly"	27c-29c
Aluminum, Ingot	55c lb.
Wire Nails	$2.50 base
Cut Nails	$2.50 base
Pure Manila Rope	16c base
British Manila Rope	13½c base
African Hemp	13½c
Sisal	11¼c
Lath Yarn	10¾c

For quotations on other hardware goods see weekly report and current quotations.

for the floating of the allies loan in the United States there has been a renewed inquiry for copper. London has shown advances, and these have been reflected in higher figures in New York. Locally 21½c is being quoted still, although advances are likely to be made at any time. However, generally speaking, it is not the opinion of those closely in touch with the situation that increases will not be great, as the statistical position of the market does not warrant much higher prices than now current.

Antimony.—The local quotation for antimony of 35c continues as a nominal indication of the market for Chinese and Japanese varieties. For Cookson's or Hallett's the stocks available are so small that prices are practically at the dictation of the seller. The fact that 44c is quoted in New York for these brands gives some idea of the heights to which the market has gone.

Aluminum.—It is difficult to make quotations for aluminum, and any figure must be considered as nominal. Locally 55c is being quoted, but when New York reports 48c to 50c on ton lots with the market strong, it will be understood that prices here depend very much upon the attitude of the seller and the cost of his stocks.

Solder.—Solder has been without material change in the general quotations, and the costs of the principal raw materials have continued comparatively steady. For half-and-half the figures are 25c to 27c, and for strictly 27c to 29c, with the lower figures generally favored.

Iron and Steel.—Advances in iron and steel are a feature of the week. Practically the whole of the list is affected. Bar iron is up 10c; forged iron, 15c; refined iron, 5c; horse shoe iron, 15c; Norway iron, 25c; mild steel, 15c; sleigh shoe steel, 20c; tire steel, 10c; and toe calk steel, 10c. Following is the new list of prices:

Common bar, per 100 lbs.	$2.20
Forged iron, per 100 lbs.	2.45
Refined iron, per 100 lbs.	2.45
Horseshoe iron, per 100 lbs. ..	2.45
Norway iron, per 100 lbs.	4.75
Mild steel	2.25
Sleigh shoe steel	2.30
Domestic	2.30
Reeled machinery steel	2.75
Tire steel	2.35
Toe calk steel	2.85
Mining cast steel, per lb.	0.07¾
High-speed steel, per lb.	1.00
Cammell Laird, lb.	
Sheet cast steel, lb.	0.15
Black Diamond tool steel, per lb.	0.08
Silver tool steel, lb.	0.13½

Bolts and Nuts Advance.—The rolling mills announce a general advance on bolts and nuts, the revision taking the quotations to the trade up about five per cent. Following are the new discounts:

Carriage bolts ($1), list, ⅜ in. dia. and smaller, 65 and 5 p.c.
Carriage bolts ($1), list, 7-16 in., 55 p.c.
Machine bolts, ⅜ in. dia. and smaller, 65 and 10 p.c.
Machine bolts, 7-16 in. dia. and larger, 57½ p.c.
Sleigh shoe bolts, ⅜ in dia. and smaller, 60 p.c.
Sleigh shoe bolts, 7-16 in. dia. and larger, 50 and 5 p.c.
Coach and lag screws, 70 p.c.
Skein bolts, 70 p.c.

NEW DISCOUNTS ON BOLTS AND NUTS

Applying to Standard Lists

Carriage Bolts ($1.00 list) 3-8 in. diameter and smaller	**65, 5%**
Carriage Bolts ($1.00 list) 7-16 in. diameter and larger	**55%**
Machine Bolts 3-8 in. dia. and smaller	**65, 10%**
Machine Bolts 7-16 in. dia. and larger	**57½%**
Sleigh Shoe Bolts 3-8 in. dia. and smaller	**60%**
Sleigh Shoe Bolts 7-16 in. dia. and larger	**50, 5%**
Coach and Lag Screws	**70, 10%**
Skein Bolts	**70%**
Square Head Blank Bolts	**57½%**
Bolt Ends	**57½%**
Plow Bolts	**55, 5%**
Elevator Bolts	**60%**
Fancy Head Bolts	**50%**
Shaft Bolts ($3.00 list)	**50%**
Step Bolts, large head ($3.00 list)	**50%**
Whiffletree Bolts	**50%**
Nuts, square	**4c off list**
Nuts, hexagon	**4½c off list**

Terms: 2 per cent. off 30 days from date of shipment.

Square head blank bolts, 57½ p.c.
Bolt ends, 57½ p.c.
Plow bolts, 55 and 5 p.c.
Elevator bolts, 60 p.c.
Fancy head bolts, 50 p.c.
Shaft bolts ($3), list, 50 p.c.
Step bolts, large head ($3), list, 50 p.c.
Whiffletree bolts, 50 p.c.
Nuts, square, 4c off list.
Nuts, hexagon, 4½c off list.
Stove rods, per lb., 5½ to 6c.
Stove bolts, 80, 7½ p.c.
Tire bolts, 75 p.c.

Set and Cap Screws Advance.—The new and advanced prices on set and cap screws have now gone into effect. The new quotations are as follows:

Set screws, case hardened, 65 and 10 per cent.
Square cap, 60 and 10 per cent.
Hexagon cap, 60 and 10 per cent.

Galvanized Products.—The market for galvanized pipe, sheets, etc., is generally steady on the prices which have been in force for some time. The disposition to cut prices, which followed the very unsettled conditions regarding spelter and the slow demand, is not strongly evident, and quotations are holding fairly well, all things considered. Taking the present basis of spelter, it is claimed that lower prices are not warranted, but there may be a considerable difference as to the cost of various stocks in the hands of jobbers. Plants turning out certain galvanized products, including galvanized ware, state that the spelter market is not yet low enough to encourage operations, in view of stocks of product on hand and the high prices which continue to discourage consumption.

Lead Pipe.—The quotations on lead pipe and lead sheets are being maintained. This is in the face of the weaker market for raw material which has prevailed for some time. It would seem to be the intention to maintain prices as follows:

Lead pipe	$ 0.9½
Lead waste pipe	0.10½
Sheets, 3-lb. sq. ft.	8.25
Sheets, 3½-lb. sq. ft.	8.00
Sheets, 4 to 6 lbs. sq. ft.	7.75

Cut sheets, ½c per lb. extra.
Cut sheets to size, ¾c per lb. extra.

Nails and Screws.—An advance has been made on pressed spikes, ⅝-inch in diameter. The increase is 10c and the new base is $2.95 Montreal. Screws are very firm, but the looked for advance is still deferred. There is a continued shortage of the sizes being used in the manufacture of ammunition boxes.

Mechanics' Tools.—The very satisfactory business in mechanics' tools continues, indicating that the manufacture of munitions of war continues to spread. Prices on some lines are very firm.

Sheet Zinc.—The zinc market has dropped to a basis of 18c. The situation is unsettled owing to the attitude of producers in refusing to quote on futures. It is expected, however, that in the course of a week or so there will be some indication of what stocks for next spring will cost, and this should clear the atmosphere to some extent as regards prices to the trade.

Arms and Ammunition.—Following the action of other manufacturers of firearms, the Remington Company have announced an advance of about 10 per cent. on their full line of rifles. This will mean a large number of readjustments. This company quotes list prices and no discounts.

Boiler Plates and Tubes.—It is reported that in the near future there will be a general readjustment of the prices on boiler plates and tubes, but it is not

known to what extent changes will be made.

Belting.—Owing to the high prices prevailing for leather belting, there has been an increased demand recently for varieties manufactured of other materials. This is especially the case for use in the operation of agricultural machinery and light manufacturing plants.

Rope.—An advance of 1c has been made in the price of cotton rope, the basis now being 23c for 3-16 and larger. Other rope quotations are unchanged as follows:

Pure Manila rope	16c base
British Manila rope	13½c base
African hemp	13½c
Sisal	11¼c
Lath yarn	10¾c

Sash Cord.—Following the advance in the price of cotton rope, there has been a general readjustment of the prices quoted for sash cord. The increases are from 1½c to 2½c, and the new quotations are as follows:

Cord (Sash)—

No. 5, special	$0 55
No. 6, lb.	0 28½
No. 7, lb.	0 27½
No. 8, No. 9, No. 10, No. 12	0 28

Sheets.—Attention is directed to a slight change in the Montreal quotations on black sheets. The 26-gauge is now made $2.95, instead of $2.59. The error was due to a typographical slip, by which two figures were transposed.

Poultry Netting for Spring.—The discount on poultry netting has been set at 45 per cent. discount for the spring business. This is a decline in price of 5 per cent. Wholesalers are now in a position to go ahead booking orders on an established basis; there has been uncertainty for some time as to what the developments might be.

Flashlights.—Jobbers report that there is a good demand for flashlights. This business is steadily on the increase, and it is evident that in both the fall and spring there is a popular call. Spring demand seems to be more for the types used for the pocket or for automobile travelling, while in the fall the utility line which replaces the oil lantern for stable use is an added favorite.

Electric Utilities.—The trade reports that in the city the return of many citizens from summer homes has resulted in a good demand for electric utilities, including electric irons, toasters, etc., etc. These fixtures are commanding a growing popularity in the hardware trade.

Seasonable Lines.—With the warmer weather of the past week there has been less interest displayed in such winter lines as skates, snow shovels, sleigh bells, etc., but there has been a steady and strong call for cow ties, lanterns, horse blankets, and such lines as are regarded as staples in the fall country trade.

Utensils.—A revival of buying in useful utensils is reported. The call is strong for enamelware and tinware, but the high price of all galvanized products has interfered with the sale of galvanized ware in comparison.

Stoves.—Stove dealers report a continuance of good business from country districts. The demand is particularly good for heaters, but ranges and furnaces are getting a share of the improvement. Altogether the volume of business compares very favorably with a year ago.

TORONTO.

TORONTO, Oct. 7.—A number of important price changes and adments have taken place during the week. Details are given under various headings in this report. Hardware jobbers are unanimous in the opinion that business generally is showing considerable improvement. September business with us, stated one jobber, is ahead of the corresponding month of last year. Good news from the war zone during the early part of the week, had a beneficial effect on trade generally. October business has opened up in a very satisfactory manner, and substantial orders of fall and winter lines are being shipped. Collections have shown considerable improvement especially in the country districts. The metal trades are quiet, but inclined to weakness. In the paint trade considerable speculation exists as to future prices on ready mixed paints. Unless some unforeseen development occurs, it is altogether probable that a price reduction will take place.

An encouraging feature is the continued increase in our export trade, although this has not much improved domestic business. The improvement in the steel trade, referred to later in these columns, is a good indication of the development that is taking place. While the principal development has been in the export trade, it will obviously be of the greatest benefit to the country generally, and will in due course help to stimulate internal trade. There has been for some time, and there still is, a decided tendency to economize in all directions, and consequently development will be restricted until conditions are on a more stable basis, which can hardly be expected until the war is over.

It is, however, satisfactory to note that the Dominion revenues for September promise to be even greater than anticipated. In the Customs revenue alone there is an increase of over two million dollars for the month of September over the corresponding month last year, and an increase of about $1,750,000 for the first half of the present fiscal year. All indications point to a gradual improvement in domestic trade, due largely to war business of various kinds and, of course, to the excellent crops.

The output of shells is rapidly increasing. It is estimated that Canadian plants are producing one million shells per month, and that of this number 17,000 are being turned into fixed ammunition per day.

Steel Market

That the steel trade in Canada is now in a prosperous condition is proved by the reports of the Dominion Steel Corporation and the Nova Scotia Steel Co. issued recently. As regards the first mentioned concern. the indebtedness to the bank is being rapidly wiped out by means of profits made principally in export business. It is stated that heavy orders have been received for bars, billets, wire and nails, and that contracts for T.N.T. have proved exceptionally profitable. The coal trade has also been the best in the history of the company.

The steel plants continue working to capacity on bars and forgings for shells, there being practically no limit to the demand. The merchant bar business has improved to some extent, but the demand for structural shapes is still very light. Prices on steel products generally are very firm and may go higher. The high-speed tool steel situation is unchanged, and prices will no doubt advance further. The most serious aspect of the situation, however, is the difficulty of obtaining supplies in sufficient quantity, as an enormous amount of high-speed steel is now being used.

The steel trade in the States is very active, and the demand for steel products of all kinds is increasing. The mills are full up with business, and the export demand for steel rounds for shell, barb wire and other steel products is enormously heavy. There is a great scarcity of Bessemer and open-hearth billets, and prices are very firm, forging billets having advanced to $33 f.o.b. Pittsburgh. Steel hoops are now being

TORONTO QUOTATIONS.

Solder, Wiping—	
Acme	20c
Commercial	21c
Easy	20½c
Star Extra	23c
Strictly standard wiping	23½c

quoted at 1.50c Pittsburgh. Prices on bars, plates and shapes are very firm, with an upward tendency.

Pig Iron

The situation, generally speaking, is unchanged. There is a good demand for steel making pig iron, but foundries are quiet. It is reported that some pig iron is being exported to France. There are no price changes to note this week.

Scrap Metal

The scrap metal market is stronger, particularly for heavy melting steel, copper, brass and zinc scrap. Copper and brass scrap have advanced ½c to 1c per pound; zinc ½c per pound, and heavy melting steel $1 per ton. Wrought iron scrap is now being quoted at $9, and machinery cast iron at $11 per ton. Heavy lead is easier at 4½c per pound.

Machine Tools

The situation in the machine tool trade is practically the same as has prevailed for some weeks. Machine tool builders are working to capacity to fill orders on their books, but deliveries are still very backward.

Metals.

There is very little change in the local metal markets since last week. Trade is very quiet outside of the demand for metals used in making war supplies.

Tin.—Is slightly firmer, although local demand is not heavy. Quotations ruling locally range from 37 to 38 cents. There is nothing new in the copper situation, and prices locally range from 19½ to 20 cents. The spelter market is easier but continues to fluctuate from day to day. Local prices are unchanged at 16½ to 17½ cents.

The lead market is very dull. Foreign markets are very dull. Lead was quoted at $4.40 at St. Louis, during the middle of the week. Locally, quotations range from 6 to 6¼ cents. Antimony is unchanged at 35 to 36 cents, while aluminum is firmer, and is quoted locally at 55 cents pound. Solders are weaker and have declined 1 cent per pound. Quotations are shown in the accompanying panel.

Tin Ware Lines Advance.—The price of tin tea kettles and boilers with copper bottoms has also advanced. The discount is now 20 per cent. off list, as against 33 1-3 per cent. formerly quoted.

Copper Pits Advance.—An adjustment in the price of copper boilers and tea kettle bottoms has been made. The discount previously was 20 per cent. off list. These figures have been replaced by a new quotation of 15 per cent. off list. This quotation is general among the trade.

Cotton Rope Advances.—A new base price for cotton rope has been made, and is given at 23c per pound. This is an advance of 1c per pound.

Sash Cord Advances.—An advance in the price of sash cord is in effect with the local jobbers. The following prices are now ruling:

No. 6 .....28½c per lb.
No. 7 .....27½c per lb.
No's. 8, 9, 10, 12 .....27 c. per lb.

Bolts and Nuts Advance.—As predicted by Hardware and Metal last week, an advance has taken place in the price of bolts and nuts. The advance amounts to about 5 per cent. all round. New discounts are shown in the accompanying panel

Galvanized Sheets.—Local jobbers of galvanized sheets are displaying much interest in the galvanized sheet business. For several weeks there has been difficulty in securing even quotations on standard lines of sheets, owing to alleged price cutting. Several jobbers state that the low prices which are being quoted, are not based on present costs of material, but have been made for the purpose of securing the small amount of business that is passing. Quotations on "Premier" sheets have been reduced and are as follows:

14 gauge, $3.90; 16 gauge, $4.00; 18 to 22 gauge, $4.20; 22 and 24 gauge, $4.40; 26 U. S., $4.70; 28 U.S., $5.00; 10¾ oz., $5.25; f.o.b., Toronto and Hamilton.

New quotations are also given on "Queen's Head" sheets, and are as follows:

16 to 20 gauge, $5.35; 22 to 24 gauge, $5.45; 26 gauge, $5.70; 28 gauge, $5.95.

Waste.—The price of waste is still very firm and it is predicted that the price will hold firm for some time. Although the stocks of raw cotton are glutting the southern markets, this does not, as would be expected, relieve the situation in regard to the price of waste. This is due to the fact that since cotton was declared contraband, there has been very little raw thread to be obtained from the English and American cotton industries for the manufacture of waste, owing to the demand of the Allies for raw threads for gun cotton. Also the demand for waste made by American factories that are working on shells and ammunition for the Allies, has been a big factor in maintaining the price of waste.

Stoves—Manufacturers of stoves express satisfaction with present conditions in the stove trade. Business is said to be about normal, but with the advent of cooler weather, it is expected that the stove business will benefit considerably. There is every prospect for a good fall trade owing to the splendid crops that have been harvested, and the fairly good prices that are being paid for the same. Country districts are making a fairly good showing as compared with other years. Furnaces are moving a little slower than was expected. Ranges, heaters and oil heaters, are the lines in which interest is being shown.

Rifles.—As predicted in last week's issue of Hardware and Metal, that an advance in the price of rifles and shot guns was very probable, we have received the announcement of a further increase of 10 per cent. on one line. Other makers will follow suit, and a further general advance on all lines is expected.

Canada Plates.—A decline in the price of "Canada Plates" is announced on the local markets. The new prices are as follows: Ordinary, 52 sheets, $3.15 per case; all bright, 52 sheets, $4.50 per case.

Metal Laths.—Adjustments have also taken place in the prices of metal laths. Quotations in Toronto are as follows:

26-gauge painted metal lath 11c
24- „ „ „ „ 13c
23- „ „ „ „ 15c
24- „ Galvanized „ 19c
23- „ „ „ „ 21c

Ladders.—A reduction in the price of common extension ladders is reported. The decline is about 1c per foot, but full particulars are not available, and prices will be ascertained during the coming week.

Seasonable Lines.—Seasonable lines are moving well. Cold weather requirements such as weather strips, for which there is a good demand—and horse blankets, snow shovels, ash sifters, coal hods, etc., are all moving. Small shipments of hockey sticks and other winter sporting goods have been made of late.

English Cutlery Lines.—Although there is still considerable difficulty experienced in getting supplies of English cutlery lines, several shipments have recently reached Toronto. The jobbers who have received these shipments are well pleased with the class of goods obtained, and are quoting prices that are not considered high, when extra insurance and increased cost of production are taken into consideration.

Rope.—Although it is generally expected at this season of the year that rope sales are not so good as during the summer months, local jobbers state that business has improved rather than fallen off. The demand for all kinds of rope is good, especially from the country districts. The prices are being maintained and are shown in the current quotations:

LONDON

LONDON, Ont., Oct. 7.—Business among local hardware jobbers is very good. This applies to the selling of regular fall lines, also to the

orders that are being booked for spring. Collections are also good, and present indications are that a normal trade this fall will be experienced. There have been several price changes during the past week.

Linseed Oil.—The prediction in last week's reports that the price of linseed oil would probably advance again in the near future has proved correct; an advance of 4c per gallon is now in effect. This makes the price of oil 72c for raw and 75c for boiled per gallon, in single barrel lots. The following prices are ruling at present on the London markets:

	Raw.	Boiled.
1 to 2 barrels	72c	75c per gal.
3 to 5 barrels	71c	74c „ „
6 to 9 barrels	69c	72c „ „

Turpentine.—There is little improvement shown in demand for turpentine. Prices are holding firm and stocks are moving slowly. The following prices are quoted:

	Per Imp. gal.
1-barrel lots	64c
2 to 4-barrel lots	63c
5-gallon lots	71c

White Lead.—The decline that was expected in the price of white lead has gone into effect, and quotations are now made on a base of $9.60 per 100 lbs., in ton lots. Less than ton lots add 30c per 100 lbs.

Poultry Netting.—Orders for spring booking are now solicited, with a new discount of 45 per cent. off list. This is a decline of 5 per cent., the old discount being 40 per cent. off list.

Spades and Shovels. — Orders for spring delivery are being taken for shovels and spades at the following discounts:

1sts ..... 60 per cent. discount
2nds .....55-2½ per cent. „
4ths ..... 45 per cent. „

These quotations are firm, and an increase in the price would not be unexpected in some quarters.

Bolts.—The price of bolts and nuts has advanced 5 per cent. This change was predicted in a recent issue of Hardware and Metal. The new discounts are as follows:

Carriage bolts, up to ⅜ in., 65-5 per cent.
Carriage bolts, 7-16 and larger, 55 per cent.
Machine, up to ⅜, 65-10 per cent.
Machine, 7-16 and larger, 57½ per cent.
Plow bolts, 55-5 per cent.
Coach screws, 70-10 per cent.
Sleigh shoe bolts, up to ⅜, 60 per cent.
Sleigh shoe bolts, 7-16 and larger, 50-5 per cent.
Nuts, square, 4c off list.
Nuts, hexagon, 4½c off list.

Nails.—Wire nails are still quoted at $2.45 base. There is some talk of a further advance, but nothing definite can be ascertained in connection with this. Cut nails are quoted at $2.70 base.

No change has been made in the price of rope for some time, and a fair volume of business is reported by local jobbers. The prices locally are as follows:

Pure Manilla .....16 c lb. base
British Manilla .....13½c lb. base
African hemp .....13½c lb base
Lisal .....11½c lb. base

Fence Wire.—A fair movement of fence wire is going on locally. The prices are firm on all lines. The following quotations are general:

Barb	$3.20	per 100 lbs.
No. 9 Galv.	2.80	„ „
No. 12 „	2.95	„ „
No. 13 „	3.05	„ „
No. 9 Coil Springs ..	2.85	„ „
No. 10 O. and A.	2.76	„ „
No. 11 „ „	2.82	„ „
No. 12 „ „	2.90	„ „

Fence Staples.—The following prices are firm for fence staples:

	Per 100 lbs.
Galvanized, 100-lb. kegs	$3.70
Galvanized, 25-lb. boxes.....	3.95
Bright, 100-lb. kegs	2.85
Bright, 25-lb. boxes	3.10

Galvanized fence hooks are quoted at:
$3.70 per 100 lbs., in 100-lb. kegs.
$3.95 per 100 lbs., in 25-lb. boxes.

WINNIPEG

WINNIPEG, Oct. 7, 1915.—The rainy weather, which has been fairly general throughout the three prairie provinces, has had its influence on business, and a slight falling off in the number of orders has been noticed. However, with the weather fine now, threshing should be in full swing again, and it is to be hoped that the biggest crop in the history of the country will not be unduly affected.

Threatened advances in wire products have materialized, and a notice was included in Hardware and Metal last week advising what lines had been affected.

Wire Nails are now quoted at $3.05, Winnipeg, and $2.65, Fort William, representing an advance of 10c per keg. This does not cover the advance in cost on this line, and further advances may be recorded before long. No orders are being accepted for spring shipment at present prices, and it is hard to say when a price will be made.

Barb Wire prices for spring shipment have not been made as yet, and there may be advances on this line before the first of the year. The warring nations are absorbing the output of the American factories, and though undoubtedly the Canadian demand will be met during 1916, it can easily be seen why they will not consider contracts for next season. The prices to-day are:

	Winnipeg.	Fort William.
Lyman	$3.10	$2.75
Glidden	2.93	2.60
Baker	2.90	2.58

Galvanized Wire has also taken a 10c advance, as is shown by the following prices:

	Winnipeg.	Fort William.
No. 9 plain ...	$3.35	$2.95
No. 12 plain..	3.55	3.15
No. 9 coiled...	3.40	3.00

Annealed Wire has perhaps been the most active as far as sales are concerned. An exceptional demand has been felt, due to the erection of granaries throughout the country. In sympathy with other lines following advanced prices are in effect:

No. 0-9 base	$3.00	per 100 lbs.
No. 10 „	3.06	„ „
No. 11 „	3.12	„ „
No. 12 „	3.20	„ „
No. 13 „	3.30	„ „
No. 14 „	3.40	„ „
No. 15 „	3.55	„ „
No. 16 „	3.70	„ „

Bale Ties have taken a 15c advance.

14 gal. single loop, 9 ft. 6 in.—Winnipeg, $4.05; Fort William, $3.65.

Fence Staples. — Winnipeg, Bright, $3.30; Fort William, $2.90.

Linseed Oil has once more advanced and seems to be enjoying its usual variation in the markets. Orders are being booked for spring at to-day's prices, and it would seem to be good buying.

Raw oil ..... 83c single barrel lots.
Boiled oil ..... 86c single barrel lots.

In 5-gallon cans an extra of 5c per gallon is made, with the usual charge for containers.

Bar Iron is now quoted at $2.60 base.

Mild Steel is now quoted at $2.70 base.

Loaded Shells and Metallics, for big game shooting are in good demand, and it is expected that sales will exceed last year's figures. Orders for 22 ammunition are being accepted for next year at to-day's prices.

WINNIPEG QUOTATIONS

Solder	29c-30c lb.
Linseed Oil, raw	83c gal.
Linseed Oil, boiled	86c gal.
Turpentine, in bbls.	75c
White Lead, ton	$11.50
Poultry Netting	50% off
Copper, plannished, per lb. ..	40c
Copper rivets, No. 7.....	41½-42
Rope, Pure Manila	17½c
Sheet Zinc	25c
Black Sheets, 10 and 12 gauge	$3.15
Apollo and Fleur de Lis	$6.00
Queen's Head	$6.25
Iron Pipe:	
Galvanized, 1 inch	$9.90
Black, 1 inch	$5.95
Paris Green:	
1-lb. pkgs. (case lots).....	27½c

Glass:	Sgle.	Dble.
Up to 25 in.	$6.25	$9.00

Putty, 100 lb. drums.....$3.25

Dealers are already looking forward to Christmas, and what the trade will have to offer. The toys from the countries at war can not be had, and it is doubtful if Canadian and American manufacturers can cope with the demand. This will mean undoubtedly that various new and old games will be taken up, and a demand has already been felt for game boards and playing cards.

The hardware store is being recognized more and more as the legitimate source of supply for Christmas gifts. Merchants should see that their stock includes doll carriages, kindergarten sets, skates, hockey sticks, air rifles, 22 rifles, pocket knives, table cutlery, scissors, silve-plated ware and cut glass. These lines are easily sold, show a good margin of profit, and place the stamp of quality and progressiveness on the store.

Christmas is less than three months away, and merchants whose business has been more or less quiet throughout the early part of the year may now be able to make up former year's totals by aggressive sales tactics.

Lanterns and Chimneys are experiencing a good demand just now. Booked orders have all been taken care of, and repeat orders are being placed. Prices have not changed since the first of the year, and are as follows:

No. 2 cold blast	$7.50
Trulite, short globe	7.50

Stoves.—With the coming of the cold weather, business in stoves has shown considerable improvement, and jobbers are in hopes that last year's business will be exceeded.

Carriage Heaters.—Booked orders for this line are already being shipped, and indications point to large sales.

Other seasonable lines which are beginning to move are skates, hockey sticks, snow shoes, leather strip, cow ties, and sleigh bells. The demand for horse blankets and various lines of threshers' supplies still continues very good.

White Lead has been reduced one cent per pound, and the following are today's quotations:

	Ton lots.	Less than Ton lots.
Elephant genuine	$10.50	$10.80
Decorators' pure	10.20	10.50
Decorators' special	9.20	9.50

OILY RAGS

A great many fires are caused by accumulations of rubbish, oily waste and rags. Particularly is this true of accumulations of rags which have been saturated with linseed oil or furniture polish and used in dusting. These are very often left in some closet or under a stairway, frequently causing serious trouble.

A VETERAN SALESMAN

ONE of the best known salesmen in the hardware trade of Western Ontario is Richard Thomas, of Beatty Bros., Limited, Fergus, Ont. For 34 years he has been closely in touch with hardware stores in Kent, Elgin, Essex, Lambton, Middlesex, Huron and Perth, and their interests are very dear to him. His experience is such, particularly with the pump line, that his advice is highly valued by the trade.

Mr. Thomas has made a special study of the pump business. For many years he was in business himself at Aylmer, making the Little Giant Windmills, a large number of which are in use around these parts. In this connection he sold each year many thousands of dollars of

RICHARD THOMAS
of Beatty Bros., Limited

well pumps and these he obtained from the Wortman & Ward Co., of London. He continued in this line for 19 years when he accepted a position with Wortman & Ward. He remained with them 12 years until they sold out to Beatty Bros. in 1912. Mr. Thomas has been with Beatty Bros. ever since, and expects to continue his rounds for many years to come.

Mr. Thomas has always a cheery and a kindly word for every man he meets. "Try to let the other fellow know he knows something," is his motto. "Never dictate to a customer," he says, "but if he asks your opinion, tell him what you think. Get at his points because there is a lot to learn from the customer. Always remember that the man who pays for the goods is the man who should have the say as to what he wants."

Mr. Thomas thinks this is a very promising pump year. Pump sales in his territory have been better than ever before, and he states that the general feeling of the trade is most optimistic. He thinks there is a big field in pumps for the hardware trade, for there are so many old wood pumps still in use in every village and the country around it. These must soon play out. The hardware man who is on the lookout will get the trade.

Mr. Thomas has a son in the hardware trade in Toronto.

DRAWING TIGHT LINE OVER CREDITS

(Continued from page 27.)

trade. This can be easily estimated—and in many cases it will be found that the amount will be more, rather than less.

When the retailer gives credit he must extend this credit either out of his own funds or he must get a line in return from the wholesaler. When the wholesaler extends credit it is at a price. The wholesaler does not add interest to cover the amount for the time outstanding; he adds the interest in on the sale price. The retailer pays his interest through not being able to take advantage of discounts.

The moral is to reduce the credits to the minimum and where goods are given on account to make the term as short as possible and insist upon settlement when the time is due. This is not an argument for or against the policy of doing business on a cash basis. That is a subject which has long been argued and will no doubt be argued long into the future. There are many good arguments on both sides. Under the existing conditions the majority of merchants have decided that it is necessary to do a certain amount of credit business and if this credit business is to be done the merchant should remember that it is costing him money and that collections hold an important relation to buying.

FOUR WONDERS

A salesmanager who doesn't think he pays the old man's salary.

A salesman who thinks that perhaps the quality of the material may have something to do with his making those large contracts.

A stenographer who knows punctuation, and will look in the dictionary when she is uncertain about the spelling.

A purchasing agent who doesn't think he does you a favor when he asks you to quote.

Paint Department

Letting the Public Put One Over

Hardware Merchant Relates Experiences With Dissatisfied Customers — Clerk's Carelessness Causes Trouble With a Paint Customer— Nearly Lost Customer Over a Brush Sale

By NORMAN LOWE

IT is strange how one thing leads to another. In this case it was a jump from the bucket to the mop. The dealer (we will call him Johnson, and his store is located in a residential district of Montreal), was busy driving one or two nails into the hoop of a wooden bucket—a bucket equipped with an appliance for wringing a mop between rollers—which had been ordered by the bank around the corner.

The bank messenger boy, a cheeky young kid, had looked on amused, ever since the bucket fell to pieces on account of looseness at the hoop. When the operation was completed, he ventured to remark that it would fall to pieces again.

"No sir," said Johnson emphatically; jerking it up from the counter; "that bucket will last as long as you are messenger boy at the bank."

That led me to ask how many repair jobs they received, and he was just telling me, when one of his clerks approached, and whispered something in his ear about a mop. He spoke loud enough for me to learn that a lady was making a complaint. Johnson excused himself, and walked over to a well-dressed woman, and started to address her. Eventually I saw the lady leave with a satisfied look on her face.

"Do you get many cases like that?" I asked.

"Did you hear what she said?"

"Not a word," I replied. "I should like to know."

Story of the Mop

"Well, this is the story," he began. "About two months ago, that lady declares she gave our driver a mop to be repaired. Yesterday she called up and asked where it was. The driver was asked, and he replied that he had never received a mop from her. The clerk must have told her this in a rather curious way, because she insists that he tried to make her out to be a liar. 'Oh, I said, trying to smooth it over, 'but he could never have meant it.' However, she was positive that the driver received it, and the only thing to do was to make restitution. 'What shall I pay you for it?' I asked. 'You can credit to my account whatever you think fair,' she said haughty like. 'No sir,' I said, or when the account comes round, you'll not be satisfied!'

"In our conversation, I learned that she had paid seventy-five cents for the mop, and I suggested in a way that would bring a certain reply, that we credit her with the full amount. 'That would hardly be fair to you,' she said, adding that it had been used quite a lot. Probably it was not worth twenty-five cents, but I wanted it settled right there. I suggested half its value, and with a faint smile she agreed, and departed."

"Is her trade worth all that?" I asked.

"No," said Johnson emphatically. "They're hard customers to handle. Her husband came in here the other day, and ordered something for which we had to run all over town. He returned it inside of two days. This is the point: If I had let that woman go outside dissatisfied, she would have lost me more trade in a week than she would bring in here in a year. I've settled with her, so her mouth is closed.

"Look at it as regards yourself. Suppose you went to a store for a suit of clothes, and when you got them home, you found that misfit was no word for them; supposing you went to the store and had them altered, and they charged you good and steep, you'd never go back. If you met me, and I said, 'I want a suit. I'm going over to Jones for it,' you'd say immediately, 'Don't go there, I got stung last time.' That tailor loses ten or fifteen dollars profit right there."

Way to Lose Customers

Johnson then started to tell me a case which clinched his argument. It was irrefutable evidence that a customer who thinks he has had "one put over on him," will shake the dust of that store from his feet forever. Johnson had a partner, whose notions of merchandising were different. One day a man came into the store, purchased a paint brush, and within an hour brought it back as defective. The clerk who made the sale referred the matter to Johnson's partner, who refused to exchange it or refund the money, declaring that the article was sound when it left the store.

"As he was leaving the store," said Johnson, relating the incident, "he stopped and said to me, 'I'm never coming into this store again.' He told me his story, whereupon, I said, 'Just leave that brush here. We'll give you another.' 'But,' he said, 'Mr. Smith says that you can't do that.' 'Never mind what Smith says,' I told him, 'I'm running this store.' 'You wouldn't be taking that out of your own pocket?' he asked. I told him no.

"He left the store pleased. He has never been in the store since, and will not darken the doors as long as Smith remains. He gives me business over the phone, though. The very next week he asked me to send up a baby carriage. I said, 'Why not run down and look at them? He refused. Eventually, he bought one at fourteen dollars. If I hadn't caught him as he was going out, we wouldn't have had a smell of that order.

Unreasonableness of Woman

"I tell you, selling is a wonderful business. A man can be shown, but a woman seldom. If I find that a woman is not amenable to argument, I close right there, and make full amends as far as possible.

"I'm selling five times as much varnish as I did a year ago. I've got a good line, with lots of talking points. But, if a customer complains, which is very seldom, that it won't stand up, I know it's not the fault of the varnish, but I give him some more to try again. The manufacturer stands back of me in this and I lose nothing by it.

Replacing Floor Finish

"I remember quite well a case we had to deal with last spring," said Johnson.

The Bristles that can't come out.

(Patented)

This advertisement is No. 3 of a series giving

Fifteen Reasons for the Superiority of SHERWIN-WILLIAMS PAINTS AND VARNISHES

"Because of our specially constructed mills and other equipment, designed and built by ourselves."

TO-DAY versus YESTERDAY

Electric Light—brightness vs. Candles.

Automobile—speed and power vs. The one-horse shay.

Telephone—convenience vs. Slow communication.

Typewriter—neatness and speed vs. Quill and ink horn.

Adding Machine—accuracy vs. Long and tedious headwork.

Specially designed paint machinery—powerful and thorough vs. Hand stirring with paddle in a bucket.

COMPARE in your mind these modern improvements with their counterparts of yesterday.

Think of the wonderful development of the electric light, automobile, telephone, etc., during the last generation. You know the improvements that have taken place in them, but you probably have never seen a modern paint mill, water-jacketed, geared, and perfectly adjusted to grind fine, or extremely fine by a twirl of a screw control.

Sherwin-Williams paint mills are improved mills—as different from the paint mills of ten years ago in construction, design, control, and power, as a luxurious car of to-day is ahead of its predecessor of a few years ago.

In the manufacture of Sherwin-Williams paints, first of all huge and powerful mixers stir the lead, zinc, coloring pigments, and linseed oil until the paint appears to be as smooth and uniform as cream. After this preliminary stirring the batch is ground through a special mill that breaks up all particles of pigment which may have escaped in the mixer. From this mill the paint is led into the heavy grinding mill, which thoroughly combines the pigments and oil under pressure. This extra fine grinding imparts durability, easy working, great spreading capacity, and uniformity in every respect. Finally the paint runs into the large filling tanks, where the proper quantity of oil is added and the paint is again thoroughly mixed by power-driven steel paddles until it meets the approval of our skilled testers.

S-W paint mills and equipment are unique, as no other manufacturers in Canada have mills, etc., of their own special design and build.

FACTORIES: MONTREAL, TORONTO, WINNIPEG, LONDON, ENG.

"A lady came into the store and said she wanted to paint around the border of a floor. She had a very fine rug, but the floor being of soft wood, had been painted a very dark brown color by a previous tenant. Unfortunately a new and rather careless clerk, who was later discharged, waited on the woman. She explained her needs—told him that the floor in its present state was a very dark brown, and she would like to have it finished in some light color. The clerk showed her a sample card of a well-known floor varnish stain. The lady immediately picked on light oak as the suitable color. She asked the clerk how it should be applied. He told her to simply put it on with a brush. She bought a quart of stain at $1 and a 40-cent brush. She ordered the goods sent to her home and phoned to the maid giving her instructions to stain the floor as soon as the stain and brush arrived. The maid did as instructed—applied the light oak stain over the very dark brown paint which was on the floor. Imagine the disappointment of the lady when she returned home late in the afternoon and found that the result obtained was altogether different to that shown on the color card. The lady immediately phoned to the store. She was very angry. Company was expected at the house in a couple of days, and the floor looked terrible. I called the clerk, and after hearing both the story of the lady and the clerk, I knew that the latter very foolishly sold the lady a quart of light oak stain and told her to apply it over the dark brown paint. Instead, he should have sold her a can of suitable ground color to cover the dark brown paint, and instructed her to apply the stain after the ground color had dried. I told the lady I would sent a man up to her house to explain matters. I sent up one of my best clerks. He took along a quart of ground color, a quart of light oak stain and another brush. After matters were explained the lady bought the can of ground color and we gave her a quart can of the light oak stain. Thus we lost the cost of a quart of stain but it was good policy for us to do so. Our clerk was entirely at fault in not giving proper instructions. Had we not straightened out the matter to the customer's satisfaction we would, I am sure, have lost all her future business, and probably some of her friends. As it is, she is still a customer of ours, and since the transaction referred to took place, she has purchased, I should say nearly two hundred dollars' worth of hardware, including paint, floor wax, cutlery, a gas range, washing machine, and many other articles. Every hardwareman is up against the same problem. You have to do all you can within reason, to keep your customers from becoming disgruntled. Occasionally you have to let a customer put one over on you, but cases of this kind are very rare. I find that a great many of the misunderstandings originate in our store, and are due to insufficient details and instructions being given to customers by clerks despite the fact that we try to educate and train our clerks to give efficient service to the purchasing public.

WEEKLY PAINT MARKETS

(Continued from page 48.)

good demand for flat wall colors for inside work and retailers appear to be pushing sales of this line very hard.

Stove pipe enamel, aluminum, linoleum varnish and other sundries are moving well.

White Lead

The demand for lead has improved slightly since the recent price decline, but even at that the demand is far below normal. The pig lead market is very dull and all lead products are more or less weak. Pure lead is now quoted at $9.60 per 100 pounds, in ton lots, and $9.90 per 100 pounds in less than ton lots.

Linseed Oil

While practically the same conditions exist in the flax-seed market as those of a week ago, the price of linseed oil has again advanced 2c per gallon. The majority of dealers are now quoting 74c for raw and 77c for boiled, in single barrel lots, while the price that was in effect last week is still being maintained by some dealers. The general trend of the linseed oil market is inclined to be firm, on account of the reported shortages of flax-seed in the West, also the inclement weather which has been so prevalent is also said to be a big factor in the recent advances in the price of linseed oil. The prices quoted by the majority of the trade are as follows:

	Raw. Per gal.	Boiled. Per gal.
1 to 2 barrels	74c	77c
3 to 5 barrels	73c	76c
6 to 9 barrels	71c	74c

There are some jobbers quoting last week's prices, which are as follows:

	Raw. Per gal.	Boiled. Per gal.
1 to 2 barrels	72c	75c
3 to 5 barrels	71c	74c
6 to 9 barrels	69c	72c

Turpentine

The volume of business passing in turpentine is practically unchanged from that of the last two or three weeks. The primary markets are a little firmer than they were a week ago, as several fairly large shipments have been made to England during the past week. The following prices are firm:

Single barrels	64c per Imp. Gal.
2 to 4 barrels	63c per Imp. Gal.
5-gallon lots	71c per Imp. Gal.

Glass.

An improvement in the amount of glass moving is announced by the local jobbers. There have been several fairly heavy shipments made during the past week to the country districts, also the city trade has revived a little. The prices are still quoted as firm and are shown in the current market quotations.

Putty

With the impovement in glass which has been noticed recently, the call for putty has also been more pronounced.

Prices are firm and are quoted on the local markets as follows:

	Per 100 lbs.
Bulk, in casks	$2.50
Bulk, in drums	2.70
Bulk, in 25-lb. drums	2.80
Bladders, in barrels	3.10

Gasoline

A further advance in the price of gasoline has gone into effect. Shortage on the American markets is given as the cause for the frequent advances. Prices quoted in Toronto are as follows:

	Per gal.
Any quantity, in barrels	21c
Drums, 40-gal.	19c
Tank wagon	18½c

Benzine

In sympathy with the advances in the price of gasoline, the price of benzine has also advanced. Benzine is now being quoted at 20c per gal. in any quantity.

ATTRACTIVE STORE IN LUMBERING TOWN

(Continued from page 26.)

Many lines of household hardware including tin and enamelware, aluminumware, etc., occupy considerable shelf space at the rear of the store, facing the main entrance. This department is located at the rear of the 5, 10, 15 and 25c counters. It will be noticed in the accompanying views that there appears to be an abundance of display space in the store. There is ample room for display purposes, owing to the fact that the main store interior is very large, and almost square, being 50 x 60 feet. In the basement there is ample space for storing nails, glass, oils, etc. A freight elevator is used for transporting goods from one floor to another.

The store, which is exceptionally bright in the daytime, is illuminated at night with electric lights.

In a lumbering town there is always a large sale for leather mitts. A special display stand near the entrance is used for displaying leather mitts and gloves.

This store is an exceptionally attractive one for a lumbering town of 1,800 population.

Buck Brothers, of Millbury, Mass., original makers of Buck edge tools, have bought out the firm of Charles Buck Tool To.

Handle your Oils and Gasoline with the

WAYNE PUMP

IT PREVENTS WASTE DUE TO EVAPORATION, LEAKAGE AND SPILLING AND MAKES THESE GOODS MORE PROFITABLE.

It saves time and labor, as there is no constant filling and handling of measuring cups, and does away with dust and unpleasantness.

Throws a pint, quart, half-gallon or gallon, and measures exactly.

Works easily, and when not in use can be securely locked. Gears are completely housed. All parts accurately machined and thoroughly tested, and are interchangeable.

If you are interested in a clean, safe, money-saving way of handling oils and gasolines, jot down a line for full particulars on the Wayne System NOW.

Weekly Paint Markets

MONTREAL.

Montreal, Oct. 7.—Attention in the paint trade is being focused upon the future situation of mixed paints with zinc as the uncertain and likely to be the deciding factor in whether the present high prices are to be continued into the spring campaign or whether there will be some reduction. It is recognized that the present quotations are abnormally high, owing to the conditions which have prevailed since the opening of the war, and during the fall selling there has been noted a reluctance on the part of the trade to book more than assured requirements. Manufacturers like the retailers, therefore, are interested in bringing the market to a lower level. However, until there is some definite indication of what supplies of zinc are going to cost no forecast can be made with certainty.

The zinc producers have promised to give quotations on futures in the course of a week or so, and manufacturers will then be able to figure with some degree of definiteness on the cost of supplies for spring selling. Whether these quotations are lower or whether they maintain their present high level will be the main deciding influence in the price policy. Too much importance can be given to the recent decline of $1.00 in white lead, although it will, of course, be a big influence. The cost of zinc will offset it to a more or less extent, and then there is the higher market for oil, the stronger position of turpentine, and the scarcity and higher cost of coloring materials.

The present outlook would appear to be hopeful for some reduction in prices but, as previously stated, it will depend to a large extent upon what course may be taken by the zinc producers.

Business continues to drag. Better than a year ago, and fairly satisfactory under the general conditions prevailing, it is still below normal. There is some business developing in special lines as the result of activity on munitions of war, but the general quietness in industrial and building trades continues, and in the country, while there is a slight improvemet in sentiment, the price situation seems to encourage a continuance of hand-to-mouth purchasing.

Linseed Oil.—The oil market is firmer to higher in sympathy with the position of the raw material, which has advanced to high levels. Some firms have increased their quotations a couple of cents, and this has created the old condition of a spread in the prices to the trade. However, this may only be temporary because the tendency now seems to be to follow the flax market more closely, and it is stated that, even at the highest figures given, advances would be warranted. The following prices cover the range:

	Raw.	Boiled.
1 to 2 barrels	68-70c	71-73c
3 to 5 barrels	67-69c	70-7c2
6 to 9 barrels	68-68c	69-71c

White Lead.—The market for white lead is steady and firm on the low level, established a couple of weeks ago, there is nothing to indicate that there will be further declines, prices evidently having reached a basis on a par with costs of raw materials; in fact the prediction is heard that the present outlook indicates a rising rather than declining tendency. The quotation for ton lots is $9.45, with an advance of 30c for less quantities.

Zinc.—The zinc market is being regarded with a great deal of interest in the trade. At the present prices it is the sustaining factor in the mixed paint situation, and the basis upon which the spring campaign will be conducted will depend to a large extent upon the quotations for future supplies to be announced by the producers in the course of a week or so. In relation to spelter, lower prices would appear to be logical, but then war times bring their own coditions and everything is uncertain.

Turpentine.—Despite the firmer influence in turpentine referred to last week, and the tendency to advance the lower quotations within the wide range existing as between different jobbers, the low figure of 58c is still being given, although 60c would probably be nearer the present market. The range is as follows:

	Per gal.
½-barrel lots	61-65c
1-barrel lots	58-62c
2 to 4-barrel lots	57-61c
5 to 10-barrel lots	56-60c

Gasoline and Benzine.—Again there is another advance recorded for gasoline, the price now being 18½c in drums and 18c for tank wagon. At the same time there is an important re-adjustment in the quotations for benzine, the basis being established at 1c under gasoline, or 17½c in drums and 17c tank wagon.

Red Lead.—In sympathy with the white lead market, there has been a reduction in the quotations on red lead to 9¼c in large casks and 9⅝c for small casks. The change would probably have been more pronounced were it not that Canadian products have been eliminated to a large extent, and the market is therefore dependent upon imports.

Glass, Putty, Etc.—There is a better demand for glass of window varieties with the cooler weather, and an attendant improvement in the putty business. There is always a good movement in putty in the fall, and while the small building showing this year has had its effect, the consumption is regarded as fair. There is practically no change in the unsettled condition as regards dry colors.

TORONTO

TORONTO, October 7. — Although there is little or no improvement in the demand for oil, some jobbers have advanced prices two cents per gallon during the week and predict that further advances may be expected. The recent further decline in white lead has stimulated buying to some extent, but many in the trade feel that even at the reduced price, white lead is very high, considering present conditions. There is a very fair sorting business going on in ready-mixed paints and sundries. There is a general feeling that ready-mixed paint will decline in price before spring booking commences, although nothing definite can be said, owing to the uncertain conditions which prevail in connection with certain products which enter largely into the making of ready-mixed paints. It is altogether likely that some move towards a re-adjustment of prices will be made in about a month's time. Recent fine weather has had a tendency to create more activity in outside work. There is a

(Continued on page 46.)

"O. K., GO AHEAD!"

There is no time wasted with doubtful enquiries and wasteful experiment when

B-H "ENGLISH" PAINT

is chosen.

The architectural profession, the painting trade and the public in general are awaking to the fact that

B-H "ENGLISH" PAINT

is really more convenient and better in *every* way than hand-mixed paint.

It is more uniform, and it contains the best materials,

70% of Brandram's B.B. Genuine White Lead and

30% of Pure White Zinc

in White and all tints.

It is ground much finer and altogether gives a better finish and more lasting protection than any other kind of paint, hence its rapidly increasing sales.

The Barton-Netting Co., Ltd.

9 and 11 Pitt St. East, Windsor, Ont.

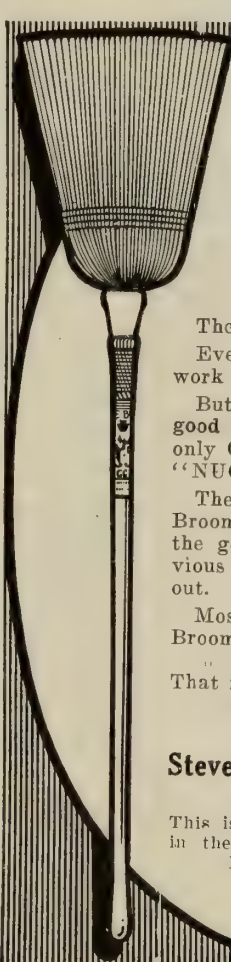
The Magnet Two Styles

A Hand or Power Washing Machine you can place practically in every home in your community. particularly where gasoline, steam engine, electric or windmill power is available.

The mechanism is the same on both style machines, except the fly wheel, which for the power machine has a flat rim for belt. The gearing is all on side of tub instead of cover, which can be raised without removing belt or stopping the machine. Get a full description anyway. Made only by

The DEMAND, the MARKET and the PROFIT are all there.

CUMMER-DOWSWELL, Ltd., Hamilton, Canada



TRADE MARK KEYSTONE BRAND REGISTERED

"Nugget" Brooms SELL THEMSELVES.

They're so light!

Every woman wants a light broom to work with.

But the trouble has been to make a good broom that is light, and there is only ONE made in Canada to-day—the "NUGGET."

Then the women like the "Nugget" Broom because of the smoothness of the golden yellow handle, and the obvious superiority of the finish throughout.

Most important of all, the "Nugget" Broom stands up under hard use—the [illegible] doesn't turn at tip or fall out. That means a satisfied customer returning to your store for another!

A Rock-Bottom Foundation For Better Paint Business

Martin-Senour quality is to your paint business what a rock foundation is to a house. It affords unlimited opportunities for your paint department to increase in value, and shuts out all possibilities of depreciation.

SELL

MARTIN-SENOUR PAINTS AND VARNISHES

Made in Canada But Sold on Merit

and you'll give satisfaction that will cinch the future orders of the best painters and largest paint users.

You'll increase your sales in all other lines through the prestige you establish and from the greater number of customers who will be attracted to the Martin-Senour exclusive agency store.

Ask the man who sells them

Not the least interesting feature is the extensive Advertising and Sales Promotion campaign especially arranged to aid our Dealer Agents. It comprises effective ideas in Interior and Exterior display, Mailing campaigns, Follow-up systems. In fact, nothing left undone to boost your sales.

Our message of quality and value in Martin-Senour products reaches nearly every possible user in Canada through the mediums of the largely circulated Daily and Weekly Press, Magazines, Farm and Religious Journals, etc.

Drop a card for proposition.

I am a Kyanize Dealer

KY-AN-IZE

"THE year before I took hold of Kyanize I sold 2,000 gallons of *all kinds of varnish*. The year I first handled Kyanize I sold 2,400 gallons altogether and sold about 300 gallons of Kyanize. Then I put in a *full line* of Kyanize and had the advantage of your advertising co-operation—In seven months I sold over 3,000 gallons of Kyanize. Your advertising did *wonders* for me.

I can't see why every dealer isn't a Kyanize dealer. Talk about co-operation! The Boston Varnish Company *do* more, *sell* more for the dealer than any manufacturer I know of. Kyanize has got the quality and the right price. This year will be a sales record breaker."

This Kyanize Dealer is speaking right out from the shoulder.

Boston Varnish Company

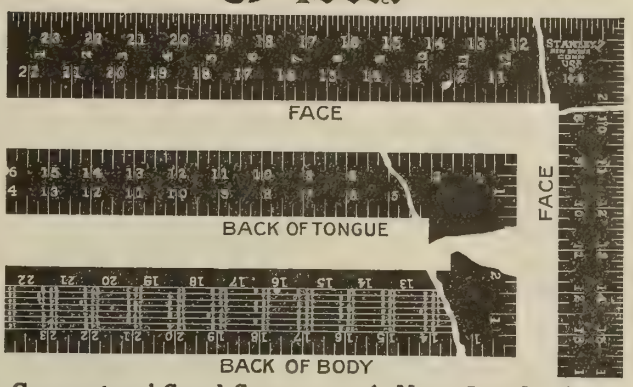
Stanley Tools



Carpenters' Steel Squares—A New Stanley Line

Stanley Steel Squares are made with the same careful attention to detail and the same high quality of material and workmanship as distinguishes all STANLEY TOOLS.

Every square is weldless, or, in other words, made from *one* piece of steel, and all four edges are machined. Particular attention is called to the finish of all numbers and the depth and accuracy of the graduation.

Special care has been given to the simplifying of all tables used, so that the workman can get the measurements he desires with ease and rapidity.

They can be furnished in a number of different styles and the variety of finishes offered include Royal Copper, Blued, Nickel Plated, Galvanized and Polished. All Royal Copper and Blued finished Squares have white enamel figures and graduations.

Each Square is packed in an anti-rust wrapper and this stamp STANLEY appears on the face of all numbers.

THE PLANT BEHIND OUR PRODUCTS

Since 1835 John Chatillon & Sons have been making Scales. These scales have acquired a wide reputation because of their superiority of workmanship and construction.

The Universal Sale of CHATILLON SCALES

is constantly increasing. Our products stay sold. They have a number of imitators, but no superiors. All our scales are warranted to be accurate and perfect in workmanship. Our policy is quality products and fair prices.

Our complete line of BUTCHERS' CUTLERY

knives, cleavers, steels and cutlery for hotel, restaurant and kitchen use, has acquired a reputation for excellence. The users of our line of cutlery are universally satisfied.

For twenty-five years our skilled workmen have been producing this cutlery. The steel is especially adapted for the purpose—tempered by our own process. The high standard of quality that has made John Chatillon & Sons' products world-famous is maintained throughout this line.

Interesting illustrated catalogue upon request.

DIRECTORY OF MANUFACTURERS

Hardware and Metal receives, almost daily, enquiries for the names of manufacturers of various lines. These enquiries come from wholesalers, manufacturers and retail dealers, who usually intimate they have looked through Hardware and Metal but cannot find any firm advertising the line in question. In many cases these firms are anxious to secure this information at once. This page enables manufacturers to keep constantly before the trade lines which it would not pay to advertise in larger space.

"AYLMER" Force Pumps

They are certain to sell easily because it has several advantages over the ordinary style.
Has longer stroke, more power, and works easier.
While designed for hand use it can be readily converted into a Windmill Pump by the addition of a flat bar, which screws into the cross head at top.
It will be to your interest to write for full particulars now.

THE PROGRESSIVE MANUFACTURING CO.
Torrington, Conn., U.S.A.

FORSTNER BITS

bore their way right through tough, hard, knotty, cross-grained wood and leave a smooth hole and a clean surface. That's performance. THEY DIFFER FROM ALL OTHER BITS, BEING GUIDED BY THE RIM INSTEAD OF THE CENTER. That's scientific construction. They bore any arc of a circle and can be guided in any direction. That's adaptability.

Made for Brace—made for machine. Packed singly—packed in sets. That's convenience. And they sell to Wood Workers, Carpenters, Cabinet Makers and others. That's why you should sell them. Order through your jobber to-day.

TWO CENTS PER WORD

You can talk across the continent for two cents per word wtih a WANT AD. in this paper

Stopping an advertisement to save money is like stopping a clock to save time. Advertising is an insurance policy against forgetfulness—it compels people to think of you.—*Galveston News.*

"Comfy" Weather-Strip

sells at a quick selling price

IS IN EVERY WAY AS EFFECTIVE IN KEEPING OUT THE COLD AS THE ORDINARY WEATHER-STRIP. AND IT SELLS AT A VERY LOW FIGURE IN COMPARISON.

A display of the goods and the price is sure to effect many sales.

Put up in cartons of one pound each, or 35 feet in carton

You can talk across the continent for two cents per word with a WANT AD. in this paper.

A Straight Talk from the Manager

One Way to Pay Expenses

IN a Western Ontario city the proprietor of the leading cigar store and billiard parlor pays the whole running expenses of his establishment out of the profits derived from selling salted peanuts.

Similarly, a hardware merchant could make one specialty pay his rent; another, his delivery expenses; and still another, his telephone bill; or an aggressively managed specialty department (such as automobile accessories) might easily be made to pay all the incidental expenses of the business.

In this very issue of Hardware and Metal there are many articles advertised whose profits would pay certain fixed expenses in your store if you put them into stock and pushed their sales. Why not give this idea a trial? The first step is to carefully read the advertisements in this issue before you think of laying it down.

J. G. L.

Condensed or "Want" Advertisements

Those who wish to sell or buy business or stocks, obtain competent help, connect with satisfactory positions, or secure aid in starting new enterprises, should not fail to use the Want Ad. Advertisement Page of HARDWARE AND METAL. It is the central market place of the hardware trade throughout Canada. There is always someone somewhere looking for just such proposition as you have to offer. RATES (payable in advance):—2c. per word first insertion, 1c. per word subsequent insertion, 5c. additional each insertion, when Box Number is required. Each figure counts as one word.

POSITION WANTED

MARRIED MAN OF FORTY, WITH TEN years' retail and twelve years' wholesale hardware, also travelling experience, open for engagement as traveller for hardware or paints, or manager and buyer for retail. Best of references. Apply Box 219, Hardware & Metal. (42)

FOR SALE

FOR SALE—FORTY-SIX FEET OF SHELVing and facing, including two glass cases with lower section of sliding doors. Butternut wood, stained dark green. Original cost over $300; will sell for $150. Will send cuts showing fixtures or cuts may be seen at any office of Hardware and Metal. Box 199, Hardware and Metal. (41)

BUSINESS CHANCES

MANUFACTURER OF PROFITABLE SHEET metal specialties, wishing to extend business, offers quarter interest to competent sheet metal man with one thousand dollars. The Simplex Co., Owen Sound, Ont. (45)

MISCELLANEOUS

FIRE INSURANCE. INSURE IN THE HARTford. Agencies everywhere in Canada.

WAREHOUSE AND FACTORY HEATING systems. Taylor-Forbes Company, Limited. Supplied by the trade throughout Canada. (tf)

ADDING TYPEWRITERS WRITE, ADD OR subtract in one operation. Elliott Fisher, Limited, Room 314, Stair Building, Toronto.

DOUBLE YOUR FLOOR SPACE—BY INstalling an Otis-Fensom hand-power elevator you can use upper floors as stock room or extra selling space, and increase space on ground floor. Costs only $70. Write for catalogue "B." Otis-Fensom Elevator Co., Toronto.

GOOD STENOGRAPHERS ARE WHAT every employer wants. The place to get good stenographers is at the Remington Employment Department. No charge for the service. Remington Typewriter Co., Ltd., 144 Bay St., Toronto.

HARDWARE STORE BUSINESS METHODS —The authors of the articles in this book are for the most part practical and progressive hardware merchants. The embodiment in these articles of the experience of such able and enterprising men and the suggestiveness of the principles and maxims presented make this volume of infinite value to that trade. The 40 subjects discussed include: Rules and Regulations for the Hardware Store; Hardware Buyer; Good Methods in Stock Taking; Prices and Catalogues; Collecting Accounts: The Merchant and His Employees; Changing Business Conditions and How to Meet Them; Profit Figuring System; Starting in Business; Changing a Credit into a Cash Business, etc. 220 pages. Price $1.10, postage paid. MacLean Pub. Co., 143 University Ave., Toronto.

HARDWARE WINDOW DRESSING—THIS is the first book ever written devoted exclusively to Hardware Display. There are 256 pages and over 200 illustrations with full working descriptions. It is the purpose of this book to illustrate and explain how hardware windows may be dressed to the best advantage—how they can be made to sell goods. It is not a theoretical work but a collection of specimens of the best work and ideas of the most expert window dressers in the world. These men have contributed their experience covering the many phases of hardware window display. This volume, therefore, represents the sum total of information on this subject presented as concisely as is consistent with clearness. By following the simple illustrated directions given in "Hardware Window Dressing" any clever clerk can put in good hardware displays at no cost whatever. Size 8x11 inches. Price $2.60 postpaid. MacLean Pub. Co., 143 University Ave., Toronto.

Delta Files

The kind you'll sell again

because they cut faster and retain their cutting edge longer than any other file on the market. This is a claim that is not made at random—it is based on the results of exhaustive tests against other makes under precisely the same working conditions.

There's a shape and size for every purpose. Look for the Delta trademark on the tang—it's a "Satisfaction or money back" guarantee.

We supply "Delta" agents with very attractive advertising matter.

Write your jobber; if he cannot supply you, write us.

Who Wants Your Order?

¶ The firms that are most likely to appreciate your order are the ones that are keenest to get it.

¶ The firms that advertise are bidding for your business in a broad, yet personal way—the modern way. They are proud of their goods and are not ashamed to show them in public to the most critical.

¶ Patronize the firms that advertise.

¶ A firm that appreciates your order will serve you well.

The Financial Post of Canada

"The Canadian Newspaper for Investors."

143-153 University Avenue
TORONTO

The Most Information The Most Entertainment —and all Made-in-Canada

Here are a few of the features which make the October issue of MacLean's the best number yet put out by this aggressive magazine.

"The Woman Question," by *Stephen Leacock,* an article that presents a new viewpoint on a vexed question. It is presented in the virile, readable style of Canada's great humorist.

"Canada's Opportunity," by *Agnes C. Laut,* a powerful article on financial and trade conditions arising out of the war.

"Tryst," by *Alan Sullivan,* a short story that for sheer perfection of style equals anything that Mr. Sullivan has ever done.

"The Wicked Partner," by *H. F. Gadsby,* a light sketch of the Hon. Robert Rogers, written not from the political but from the human side.

"The Years of the Wicked," by *Hopkins Moorhouse,* a short story that is different from anything you have ever read before—one of the best things yet turned out by this rising young author.

"The New British Columbia," by *Norman Lambert,* an article on the Northern part of the mountain province which for vivid descriptive power has never been excelled. This is illustrated by a series of remarkably beautiful photographs of the Rockies.

"The Next Man Up," by *W. A. Craick,* an article on the men who are second in command of the big corporations of Canada. It gives an inside picture of the workings of some of the big railways and banks.

There are nine other stories and articles, all of a high order, and *our Review of Reviews Department, which contains condensed versions of the best articles which appeared during the previous month in the magazines of the world. This is one of the biggest features of MacLean's Magazine and is in itself of such value that you need MacLean's for this department alone. There are twenty articles in the October issue carefully selected as the most informative and interesting, published the world over.*

Special Offer—To new subscribers only. In order to introduce MacLean's Magazine into homes where it is not now read, we are giving the magazine for eighteen months for price of twelve—see coupon below.

MACLEAN'S MAGAZINE

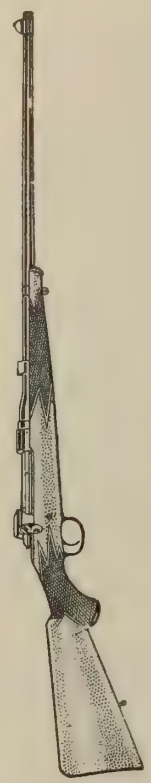
THE MACLEAN PUBLISHING CO., Limited
143-153 University Ave., Toronto, Ont.

A Special Offer to You.

MacLean Publishing Co., Ltd.
Dear Sirs:
Enter me as a subscriber to MacLean's Magazine for eighteen months, starting with your October number, and on receipt of invoice I will remit $2.00.

Name .....

Address .....



"I will say to anyone who is looking for the best thing in rifles, get a Ross and you will never be disappointed."

JAS. L. McLAUGHLIN, Hunter and Guide
Valley, Wyoming, U.S.A.

Mr. McLaughlin adds:—"Killed his first elk at 400 yards and the second at 300, and did it the easiest of anything I had ever seen. Such killing power I had never witnessed before, and when you hit an animal in the body he never gets away."

This experience is common to all users of the Ross .280. In his enthusiastic praise Mr. McLaughlin only echoes the appreciation of most skilful big game hunters the world over. No dealer in Canada can afford not to lay in a stock of Ross Rifles. Each rifle sold means a satisfied customer. Retail price $55.00.

Ross .303 Sporting Rifles are handsome, well-balanced and accurate weapons, hard hitting and reliable. The retail price is most moderate. $25.00-$35.00.

The Ross .22 Cadet Rifle is the official government arm for Cadet Corps. It is strong, reliable and accurate. Unexcelled for use on camp and trail. Retails at $12.00

Dealers' discounts are sufficient to make the sale of any Ross Model a real help to the day's profit.

ROSS RIFLE COMPANY - QUEBEC

A Clean, Safe and Economical Gas Lamp

The Wells Patent Self-Generating Acetylene Lamp gives a pure, soft white light, free from smoke or smell. Burns from 5 to 8 hours on one charge, and is particularly suitable for farm-houses or places far removed from city gas supplies.

The Lamp is easy to operate and clean; is more economic than oil, and has a very attractive appearance.

We have a handsome proposition for wholesale and retail selling agents.

Write to-day for particulars.

Household Utilities Manufacturing Co.
Room 215, Dominion Savings Building

More-Profit Pumps ---Real Profit

No use to sell a pump that makes trouble for a dealer with his customer.

The trouble is remembered The cost of repairs is dead loss of time and temper. The dealer suffers.

"Aremacdee" hand and motor metal pumps for force or lift use, every kind, are shown in the big catalogue.

Dealers, ask for prices and terms. Get real profits on your metal pump sales.

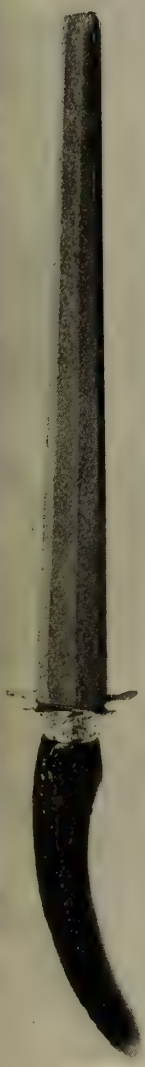
Might We Suggest That You Stock Up On Carborundum Knife Sharpeners Right Now?



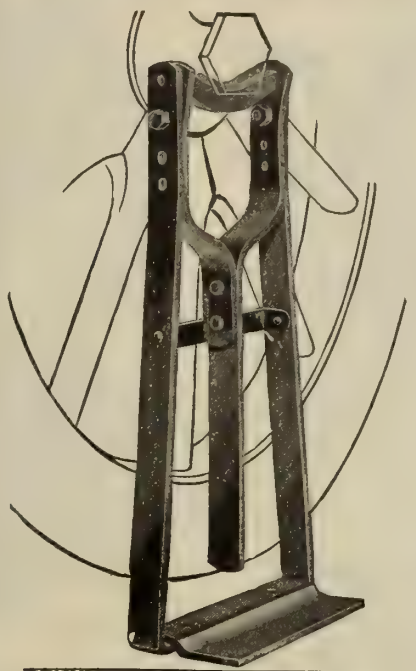
OF course, they sell any time, but in the fall when turkey carving days come you have the logical time to push Carborundum Knife Sharpeners still harder. Show them in your windows along with the carving sets—display them on your counters—your customers will surely be interested in a sharpener that puts an edge on any household knife in a twinkling. A sharpener that really cuts—faster, cleaner than the old-time steel.

Made with genuine stag or wood handle—put up in attractive display cartons.

Better stock up now and be prepared for the carving season. Incidentally they help YOU to a nice slice of profit.

The Carborundum Company
Niagara Falls, N. Y.

TIME TO GET BUSY



on "R-W" 501 STORAGE JACK and TIRE SAVER

Every car owner needs a set. Sell on sight. Save blocking up car during winter. Used as Tire Savers during summer, saving a third on mileage. Adjustable for wheels of all sizes.

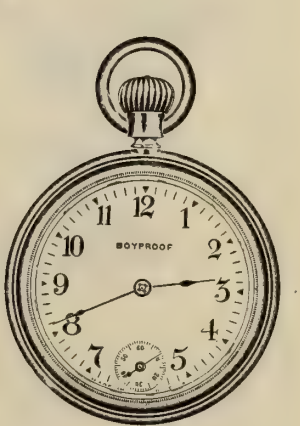
We Are QUICK SHIPPERS



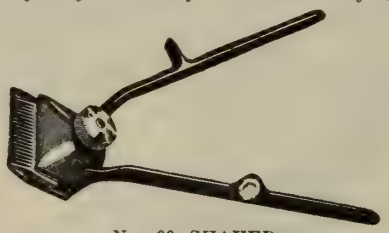
LEWIS BROS., LIMITED, MONTREAL

PRIEST'S HORSE and TOILET CLIPPERS

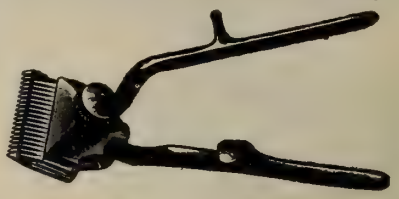
Made by American Shearer Mfg. Co.

present a complete line at a range of prices covering all requirements of the trade. They are all quality goods, and represent best designs and highest standards of workmanship, regardless of price.
Some styles of Toilet Clippers are illustrated below. All are heavily copper plated and polished before nickeling, thus giving a higher finish, which lasts much longer than ordinary plating. The utmost care is used in grinding and tempering the cutting plates, giving cutting qualities whose superiority may be readily demonstrated by comparison. No. 00 and No. 000 Shaver for beard and neck trimming, are clippers of the utmost lightness and refinement, not paralleled by any other American manufacturer.

STANDARD No. 0, No. 1 and No. 2.
Retailing at about $2.50. High-class barber's clipper.



No. 00 SHAVER
A light and elegant Clipper for beard and neck trimming. Retailing at about $2.25.



SPEED
Best low-priced Clipper made. Retailing at about $1.00.

IMPROVED COLUMBIAN
with grooved bottom plate, retailing at about $1.50.

If you are not familiar with these goods, send for samples and compare them with others.

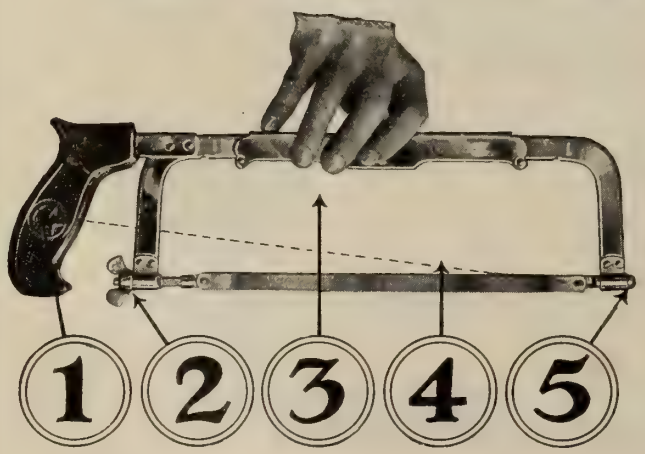
And these 5 points mean MORE sales and MORE Profit!



MILLERS FALLS
STAR HACK SAW No. 1027

MILLERS FALLS TOOLS

Again, as usual with Millers Falls Tools, it's a matter of being able to offer MORE! To furnish at a price that is entirely reasonable a tool of exceptional advantages. For instance in this Millers Falls Hack Saw No. 1027—No. **1** is an indurated composition rubber PISTOL grip moulded in one piece and shaped to FIT the hand, so that the user can AIM his cut, and work without tiring the muscles of hand and forearm. **2** is the tension nut placed at the REAR, where the worker can reach it conveniently. **3** is the doubly reinforced channel back that gives rigidity and strength even when frame is extended to full limit of span. **4** is angle of depression, DOWNWARD because the pistol grip is connected at the top of the frame and not at the bottom. This causes the teeth to "bite-in" and CUT, without crowding the saw. **5** is the fine-nosed tip of the frame, free of encumbrances, so that with this frame one can cut in extremely narrow places.

In addition to the above, the blade of No. 1027 can be set to four angles. Every detail made to MILLERS FALLS Standard of Quality—and backed by our guarantee of satisfaction.

Let Us Show You
some of the other 200 Millers Falls Tools that will help you make MORE money more easily. Write for our catalog and for booklet explaining how Millers Falls helps you SELL.

Buck Brothers

Milbury, Mass., U.S.A.

TOBOGGANS—"THE CANADIAN MAID"

TWO GREAT FEATURES OF "THE CANADIAN MAID"

First—The Raised Front. For about eighteen inches the front of the toboggan has a gradual slant. Result—the toboggan does not PUSH the snow in front of it, and thus you have GREATER SPEED, AN EVEN AND COMFORTABLE MOTION and a LONGER RIDE. Note this sketch—which shows how other toboggans without this feature shove the snow along.

Second—The Three Runners—which give emphasis to the above-mentioned feature and which guarantee safety, as it aids in controlling the toboggan. The runners hold the toboggan to the track. With two, six or eight passengers, the "Canadian Maid" No. 4 toboggan is equally easy to control, the runners helping materially. Accidents have occurred which can be explained by the fact that the usual flat-bottom toboggan was used. Iron and steel Runners fitted at slight additional cost.

PACK-TOBOGGANS A SPECIALTY. Full information on request. Write for Prices and Dealers' Discounts.

WALTER DEAN, ∴ Foot of York Street, ∴ TORONTO, CANADA

Here's the load for DUCKS

IT'S the favorite load of those wise ones who come home with the fattest bags. Also it's the shell to be seen prominently displayed by the knowing merchant who anticipates the demands of his customers — the merchant who knows that his biggest profits come from satisfied patrons.

The CANUCK, the fastest of all shot shells, is only one of a large family of thoroughly dependable Dominion shells. You have long been acquainted with the many superior features of IMPERIAL, REGAL and SOVEREIGN, all smokeless brands, made from the standard powders and double chilled shot. And then you know the old stand-by, CROWN—the low-priced black-powder shell that has travelled in the pockets of nearly every shooting coat in Canada.

Put them all in your window. Let your customer choose. Simply guide him that his selection may be made from your stock of "The Ammunition made wholly in Canada"—Dominion Ammunition.

57 in.	7 in.	14 in.	3.25

40% DISCOUNT TO DEALERS FOR DOZEN LOTS F.O.B. ST. CATHARINES. Terms 2% 30 days.

A Quick Sales Producer

The steering is done by simply bending the runner and NOT the wooden frame.

The runner (patented) is made of BEST SILVER SPRING STEEL and for that reason it will always keep its shape, is flexible, lasting and has a smooth running surface and being GROOVED is guaranteed NOT to skid.

The sled bench (patented) is a solid stamping of WROUGHT STEEL, being lighter, neater and stronger than ANY OTHER method of construction.

The top (patented) DOES NOT MOVE, thereby enabling the operator to guide the sled much easier without danger of pinching the fingers as is common with OTHER flexible sleds.

The safety sled is made from the best suitable material and EVERY PART riveted. They are neatly striped and decorated.

Packed two in a bundle. No shipment made of less than 1/6 of a dozen. The best assortment to buy in dozen lots is:—

1/6 of a dozen, 33 inches. 2/3 of a dozen, 37 inches.
1/6 of a dozen, 41 inches.

RE-ORDERS

In any business, the best test of success is re-orders.

With few exceptions, the house that has to get its trade each year from entirely new customers is under suspicion. If the dealings were fair, and the price right, and if the goods stood up and proved their quality, the same customers ought to come back and order again and again.

Some of our customers have been buying our rubber goods, week in and week out, for over fifty years.

Our line-up is complete, our quality is unexcelled and our prices are right. Let us show you what we can do.

IT IS OUR DESIRE TO SERVE YOU

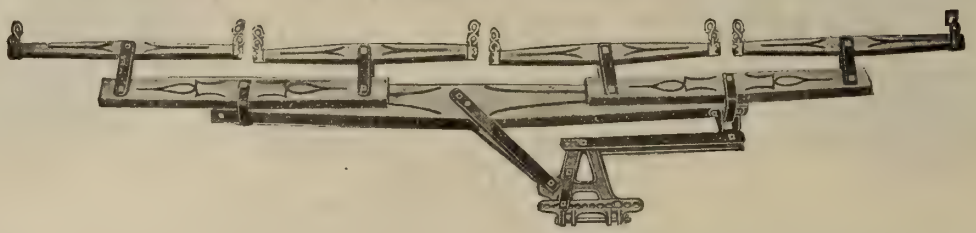
No. 20 Heider Four-Horse Gang, Sulky and Disc Plow Evener



THIS Evener works four horses abreast on either gang, sulky or disc plow, with one horse in the furrow and three on the unplowed ground. Is made very strong and durable in every respect; castings of malleable iron; straps of steel; works free from side draft; all four horses pull equal; coupled very short; made very simple, nothing to get out of order, easy to attach. Owing to the way our Four-Horse Evener is constructed, the draft straps have very little slant, which causes the Evener to work very freely. The length of the eveners and singletrees on this Four-Horse Evener gives the horses plenty of room to walk and pull freely. Can be attached to any gang or sulky plow that has a cross clevis, or disc plow that has a broad, flat draft bar, and with our Clevis Attachments can easily be attached to frame hitch gang or sulky plows, or plows that have a vertical clevis. Can be used on either right or left hand plows. Weight, complete, 55 lbs.

Advertised in all the leading farm journals—Let us refer enquiries to **YOU.** Ask about our mailing propositions **(in your name)** direct to the farmer.

"Heider" Eveners, Singletrees, Doubletrees, Neckyokes, are all Fast Sellers.

Details Regarding War Orders

Resume of What Agent of British War Office Has Been Doing in Canada Outside of Munitions—Hardware, Foodstuffs, Footwear and Drygoods in Demand —Orders to the Extent of $5,000,000 Placed

By J. W. Tyson

WITH all branches of trade more or less dislocated from their usual channels and unprecedented business conditions prevailing, the attention of the manufacturer and the producer is being largely occupied in an analysis of this commercial confusion with the idea of taking advantage of any development which may work to his compensation and advantage. The predominant factor in the Canadian situation at the present time is War Orders. In the readjustment of affairs new markets for our natural products abroad and new demands for our manufactured goods at home will undoubtedly materialize, but while the great conflict lasts the needs of the armies in the field will form the great incentive to our energies.

Manufacturing war supplies is practically a new departure for Canadian industry and the supplying of food stuffs requires the production of many "rations" which are new to us. A careful study of the whole situation is, therefore, required if Canada is to secure her share of the war business. The production of munitions has been carried out on a broad scale, because the situation was one where there was practically unlimited demand for certain standard shells and manufacturers worked to that standard, but in addition to ammunition there are hundreds of articles which enter into the equipment of the fighting forces in the field, and in this connection it would appear that in a large degree the share of business coming to Canada will depend upon the ability of our manufacturers to rise to the emergency. In view of this, Hardware and Metal has been keeping closely in touch with the agent of the British War Office in Canada and recently has been able to secure many details regarding the nature of the orders which have been placed and, what is more important, certain requirements which present new possibilities.

The arrangement through which the British War Office secures its miscellaneous war supplies—excluding ammunition, horses, fodder and other munitions—has been previously outlined. Working along practical lines, an arrangement was reached through the Canadian Pacific Railway by which Edward Fitzgerald, of the company's purchasing department and a buyer of many years' experience, was made agent of the War Office. His machinery is a unit of the C.P.R. system which is acting directly under the control of the British authorities. Thus Canadian manufacturers and producers seeking a share of war business need not consider such factors as political influence, second-hand commissions, etc. They will be dealing with the War Office just as they would deal with the Canadian Pacific Railway. This means that goods are bought on their merits, the three important points being quality, appearance and price. The first two must be up to the Government's samples or close enough thereto to favorably pass inspection and the latter must face competition from other available sources—with, of course, some slight favoritism for the colonies as compared with foreign countries.

THE BRITISH WAR OFFICE IS SEEKING TO PURCHASE—

Snowshoes,
Special barbed wire,
Needles for knitting machines,
Snap fasteners, type 22,
Special meat mincers,
Special brass eyelets,
Enamelled steel wire,
Spelter.

Manufacturers of these and other lines suitable for the use of the Allied troops should communicate with E. Fitzgerald, British War Office Purchasing Agent, Windsor Station, Montreal.

Since his appointment, Mr. Fitzgerald has placed orders for about $5,000,000. In relation to the reports which have been heard of the immensity of the shell orders, this amount is comparatively small; but when it is remembered that it is for miscellaneous articles and when it is considered in relation to peace times it will be recognized that is represents a big volume of business. However, there is reason to believe that it might have been greater with a wider field and with a better appreciation in England of our possibilities. This is indicated by the fact that when Sir Thomas Shaughnessy went to England to interview the war authorities early in July, the arrangement with the C. P. R. had been in effect for about three months and only $500,000 of business had been placed. This has increased to ten times the amount since, and it is expected that with Mr. Meldrum, who was appointed to the C. P. R. London staff some time ago, co-operating at the other end, it will be possible to bring the possibilities of Canada more directly to the attention of the British War Office.

The information which is now given out by Mr. Fitzgerald lacks in details as to prices paid, quantities ordered and successful bidders. These particulars will not be made public for the time be-

ing, Mr. Fitzgerald taking the stand that they might tend to interfere with future bids and cause dissatisfaction as to past orders.

As regards the amount of money involved, the most important items of the purchases made cover the following:

Woolen sox and cotton drawers.

Shovels, axes, electric wire and handles.

Cheese, rubber boots, matches.

The orders for sox and drawers were about the most important of all and covered several million pairs. In connection with this business Mr. Fitzgerald explains that the exact standard of the War Office was not reached but that he obtained samples from Canadian manufacturers and the orders were authorized by the War Office from the standpoint of quality and price and in relation to the capacity of the plant securing the business.

Shovels and spades were secured in large quantities, the orders running over 12,000 dozen. The business was divided between manufacturers at Hamilton and Gananoque, these being about the only two plants prepared to handle orders of this magnitude, considering price and date of delivery.

Handled axes of many kinds, and totalling hundreds of thousands, were purchased in many parts of the country, practically every manufacturer from Nova Scotia to Ontario getting a share. They were of several styles, including felling, hand, and hammer-headed. The latter is a formidable instrument and is evidently intended for the destruction of barbed wire barricades, etc.

Electric cable of a special insulated variety and suitable for field work was purchased in large quantities, upwards of a thousand miles being secured.

Hundreds of thousands of hickory handles of all varieties have been purchased, this being one of the lines in which there has been a very strong demand.

Cheese has been ordered in considerable quantity. These orders have been practically closed for the time being and there is but a very small proportion which has not been sent forward. Supplies have largely been secured in original markets and the buying was spread over a considerable period.

Rubber boots of the full hip pattern have recently been in strong demand. Every Canadian manufacturer capable of supplying got a share of the business and practically every plant in Canada had orders for unlimited quantities to be turned out between September 1st and the 16th of October.

Large quantities of safety matches are being shipped from the Eddy plant for the use of the troops. This business was placed as soon as the Canadian samples of matches had been seen by the authorities in England.

New Lines Developed

Articles which have been turned out in Canada for the first time or which have never been exported in quantities before include:

Helmets and drums.

Shoepacks.

The order for helmets, which included nearly 90,000 of this style of headgear, was unique for Canada as was also that for drums which embraced six hundred of large and small military designs. Drums have been largely imported into Canada heretofore.

The market which has developed for shoepacks is an outstanding example of how business may be developed by direct methods. A Canadian manufacturer took a small lot of this type of footgear to England and interested the War Office officials. The boot, which is specially designed for the use of lumbermen and others who have occasion to do much rough travelling, is a very substantial one, and is, besides, warm and water-tight. The first samples were followed by a substantial order in August which evidently gave satisfaction, for there was a repeat inquiry in September. Already several thousand pairs have been purchased and shipped and these represent a lot of money, the packs being very high-priced footwear.

TRADE PAPER PUBLICITY COUNTS

The articles which have appeared in the trade papers of the MacLean Publishing Company, recommending manufacturers to get into communication with the British purchasing agent, have, according to Mr. Fitzgerald, resulted in a large number of communications.

He estimates that about twenty-five manufacturers or their representatives who have called upon him have made reference to what has appeared.

The shoepacks, like the helmets and drums, indicate the possibilities of the war supply business developing a demand for Canadian products which have never found an outside market before, and there is a strong probability that this special type of Canadian boot will find a permanent demand after the war is over.

Lines Being Developed

The following are some products with regard to which steps toward manufacture are now being taken or are being considered:

Evaporated vegetables.

Snowshoes.

Barbed wire to special specifications.

Needles for knitting machines.

Snap fasteners, American type No. 22.

There are evidently great possibilities in the supplying of food stuffs if Canadian producers can turn out the varieties which are peculiarly suited for use on the battle field. There is to-day a big demand for evaporated vegetables including potatoes and onions, particularly the former. Mr. Fitzgerald is desirous of getting into touch with firms that can produce these evaporated potatoes, but it is doubtful if there will be a big volume of business with tubers at their present prices. Already one Ontario firm has done a big trade in this line with the French government. Another variety of prepared food for which there is inquiry is Julienne, a kind of dessicated soup preparation. Firms capable of making such products should get into touch with Mr. Fitzgerald at once.

Barbed wire has been purchased in large quantities, but there are greater possibilities as regards this product if specifications are more closely followed. The War Office calls for a wire with 4-point barbs not under one inch long and much closer together—say an inch and a half apart. The spools must also be smaller and should carry only about twenty-eight pounds of wire. This size evidently is much more convenient for handling in constructing barricades. Some of the Canadian mills are now considering plans to meet these specifications and it is expected that substantion orders will follow.

For needles for knitting machines and for snap fasteners, American type No. 22, there have been inquiries from the War Office, and Mr. Fitzgerald is now in communication with several firms which may be able to meet the requirements.

There is a demand for snowshoes and all firms who can manufacture them would do well to get into touch with Mr. Fitzgerald at once.

Unfilled Inquiries

There have been a number of inquiries sent out by the War Office which could not be fulfilled in Canada from any information which Mr. Fitzgerald could obtain. In the event of any manufacturers being interested he would be pleased to hear from them. They include:

Rubber sponges.

Chemical and laboratory glassware.

Meat mincers of special design.

Cotton and linen webbing.

Special brass eyelets.

Enamelled steel wire and spelter.

Other Lines Purchased

Other Canadian-made goods which Mr. Fitzgerald has secured include:

Reaping hooks, large and small.

Cement sacks.

Steel wire rope.

Planning for Retailers' Convention

Next Convention of Ontario Retail Hardware and Stove Dealers' Association to be Held on Feb. 22-23-24—Advisory Committee Recommends That Toronto be the Meeting Place—Many Members in Favor of Toronto

THE eleventh annual convention of the Ontario Retail Hardware and Stove Dealers' Association will in all probability be held at Toronto on Feb. 22, 23, 24. At a meeting of the Advisory Committee of the association, held at the King Edward Hotel, Toronto, on Monday of this week it was decided to recommend to the executive that the convention be held at Toronto on the above dates. It is understood that a majority of the members of the Executive Committee, and a large number of retailers who attended the convention last year

C. W. CONN,
President O. R. H. & S. D. A.

are in favor of Toronto as a meeting place for the 1916 convention.

The Advisory Committee dealt with a number of important matters referred to later in the article.

That the association has made considerable headway under the present plan of working is shown by an increase of 119 in membership since April 1st.

Members of the association and readers of Hardware and Metal, no doubt remember that at the convention held in February last, at Toronto, Past President Macpherson, who was appointed secretary of the association, stated that he was working on a new price book for members. The book was to be supplied free to members of the association. That it has met with the approval of the trade is clearly shown in the letters which have been received from members, acknowledging receipt of the price book. The price book has also been responsible for the securing of a large number of new members.

President C. W. Conn, Secretary Macpherson, and other officers of the association, have been working hard since the last convention to create a greater interest on the part of the individual members in the work of the association.

Among the new members of the association are eight or ten members from Western Canada, who joined in order to secure a copy of the price book, and other services which are offered to members of the association.

The Meeting

The minutes of the last meeting were presented in typewritten form, and list of the names of new members were supplied to the committee.

Secretary Macpherson reported that since April 1st, 119 new members had been added. Of the new members 78 are retail hardwaremen and 41 are travelers and clerks. Most of the new retailer members were influenced to join by the issuance of the members' price book. The receipts from new members for fees amounted to $234. The cost of price lists exclusive of postage amounted to $198.80. The treasurer reported that cash on hand amounted to $617.75.

In addition to the lists already supplied with the members' price book, it was deemed advisable to issue lists for the following: Wood screws, pipe fittings, machine bolts, iron pipe, brass goods. It was also decided to purchase 1,000 additional ruled sheets for use in preparing price lists.

It was decided to purchase a machine for printing circulars for distribution to members and thus effect a saving in printing costs. Secretary Macpherson outlined a number of new services to members, which he hoped to introduce at a future date. One of the new features referred to is a freight classification list. It was also decided to send a letter to members of the association asking for suggestion as to how to make the next convention successful, practical and interesting.

Another meeting of the Advisory Committee will be held in January and a meeting of the Executive one day before the opening of the convention.

The Next Convention

A letter was read from Secretary F. M. Tobin, of the Canadian Hardware Manufacturers' Exhibitors' Association, advising that he was trying to get suitable quarters in London, Ont., for the exhibition and convention for 1916. The Advisory Committee of the retailers' association decided that as the best buildings in London were being used by the military authorities for housing and training troops, and also on account of a very strong feeling among members of the retail association that they should next year have a convention similar to

W. F. MACPHERSON,
Secretary O. R. H. & S. D. A.

the one held this year, it would be advisable to recommend that the 1916 convention be held at Toronto on Feb. 22, 23, 24. The matter is being put before the executive of the Ontario Retail Hardware and Stove Dealers' Association and will probably be definitely settled next week.

The Members' Price Book

That the members' price book has been favorably received by the trade can be judged by the many replies which have been received from retailers acknowledging receipt of the price books. Extracts from a few of the letters are here appended:

Tate Hardware Co., Hamilton, Ont.—"The convenience of the folio is worth the price of membership alone, and we believe that a suggestive retail price list would also be effective towards establish-

ing uniform prices, and to encourage the weaker ones to get a profit that would put the hardware business on a more solid paying basis."

Clements & Co., Milton, Ont.—"We are making use of lists; this scheme is a good one and a step in the right direction, and more lists will be much appreciated."

N. Turner & Son, Cornwall, Ont. — "We have received the price lists and are under the impression that they are a good thing."

J. C. Wanless, Chatham, Ont.—"This is a real service to the hardware men of Ontario, and so much has been accomplished that I am sure every hardware man in Canada will be glad to become a member of the association, and receive the benefits derived."

Mills Hardware Co., Hamilton, Ont.—"These forms are well constructed, and are very necessary to place any hardware man in a position to render quicker service to the public. These forms alone are worth the association fee to any hardware man who is not already a member."

F. F. Balsden, Cargill, Ont.—"Folio and price lists received, and am delighted with same. I would not be without this feature for a good many times the membership fee, not speaking about the many other aiding features the Association give us. Wishing you continued success."

John Stewart, Westboro, Ont.—"I acknowledge folio of Price Lists, thank you very much, and am making good use of them."

L. C. Wideman, Charlton, Ont.—"I received price lists and think it is the best idea for price lists I have ever seen, combining economy and convenience, and will be a great time-saver to the retail merchant. The folio of price lists that are given, and that will be issued from time to time alone are worth more than the price of membership."

I. W. Bennett & Son, Gananoque, Ont.—"Received lists issued by you some time ago. We figure they are worth at least ten dollars of any hardware man's money, and are sure that your efforts will bring a large number of new members into our Association."

La Compagnie Martineau, Quebec, Que.—"We have received price lists; they are very useful and well made. It is a great help to the retail trade and we could not do without them once we have begun to use same."

W. D. Stinson, Omemee, Ont.—"I have received lists and am very much pleased with them, and, as soon as the busy season is over, will fill them in and put them in operation."

H. H. Otton & Son, Barrie, Ont.—"It is an excellent help and service to all hardware clerks and saves much time."

A. B. Bottum, Bobcaygeon, Ont.—"We appreciate the Lists very much; would suggest adding the wood screw list when possible."

R. H. Blackmore, St. Thomas, Ont.—"It is a step in the right direction; I think they are fine."

G. A. Binns, Newmarket, Ont.—"My impression is that the Lists received are one of the greatest helps to the hardware man. If he will spend a little time to put them in shape he will be surprised how smoothly things will work, especially along those lines which formerly have been so difficult to have the staff quote uniform prices."

E. W. Chard, Toronto, Ont.—"I think that the Price Lists will be a great help to a large number of hardware men; it will be to me."

H. Occomore, Guelph, Ont.—"I think the Lists are just fine, and, while I will not need all of them, those that I can use will be of great help. Our members should appreciate them very much."

A. M. Oldham, Weston, Ont.—"First class. Complete the binder with all lines possible."

Estate D. Doyle, Hawkesbury, Ont.—"A very useful Price List; I beg to compliment you."

T. M. Nash, Wellington, Ont.—"These Price Lists are fine and should increase the membership of our Association."

Geo. Tate Hardware Co., New Liskeard, Ont.—"How about a general hardware loose-leaf Price List covering all the standard lines? We are sure it would be worth considerable to every merchant."

A. L. Shiells, Kincardine, Ont.—"I am much pleased with the binder and lists that you sent. It is a fine way to have our costs and retail prices looked up so easily."

Morgan Hardware Co., Peterborough, Ont.—"Would it not be practical to have a more durable binder to supply with these lists, even if there were a little extra charge for same?"

C. A. Elliott, Brantford, Ont.—"The

(Continued on page 36.)

A novel and attractive display of Fall and Winter sporting goods arranged by C. H. Smith for the J. H. Ashdown Hardware Co., Winnipeg. Although the display may be on too elaborate a scale for use by merchants whose window display space is limited, there are many splendid suggestions offered which could be used in arranging displays of hunting equipment, which are very seasonable at present. The background of the display representing a hunting scene is painted on canvas. The layout of the camp, and the position of the hunter taking aim at a moose swimming across the lake increases interest in the display. In the foreground is shown a dog hitched to a toboggan. On the toboggan is a deer. The floor of the window is covered with cotton batting, representing snow. Included in the goods displayed, and accompanied by price tickets are rifles, electric flashlights, hunters' and campers' axes, revolvers, flasks, knives, cartridge belts, snow shoes, toboggans, shoe packs, etc.

Interior view of the hardware store of Gordon and Dubuc, Fort Saskatchewan, Alta.

Attractive Store in Western Town

Exceptionally Well Displayed Stock, of Alberta Hardware Firm, Located in Small Town—How Goods are Displayed—Doing a Large Plumbing and Heating Trade—Agency for Automobiles

DURING the past few months an exceptionally large number of attractive hardware stores, in various parts of Canada have been illustrated and described in Hardware and Metal. Many of the stores featured have been those of merchants who are located in small towns in agricultural districts.

The illustration on this page shows an interior view of another small town store—that of the Gordon & Dubuc Hardware Co., Fort Saskatchewan, Alberta. Fort Saskatchewan is located 18 miles from Edmonton, has a population of about nine hundred, and is surrounded by a wealthy farming community.

P. D. Gordon became a resident of Fort Saskatchewan about twelve years ago, and has been engaged in the hardware business ever since. Five years ago Mr. Gordon and W. A. Dubuc purchased the hardware business owned by A. T. Chambers & Co., and have worked up a large business connection.

The store proper is 100 feet long by 40 feet wide allowing considerable space for display purposes. The store has a full size basement in which light oils are kept in tanks equipped with self-measuring pumps. Other goods such as roofing, glass, nails, etc., are also stocked in the basement.

A gasoline filling station has been placed in front of the store and attracts the attention of autoists. In connection with the hardware business, the firm does a large plumbing and heating business, the shop being placed at the rear of the store and measuring 40 x 50 feet. Several men are employed the year round in this department. Heavy supplies such as plumbing supplies, steam and hot water boilers, furnaces, ranges, heaters, etc., are carried in stock in a warehouse. also at the rear, and measuring 40 x 60 feet. The stock carried at present is about $26,000.

Main Store Interior

A close examination of the accompanying view of the main store interior reveals a modern store in many respects. Practically all the stock is on display and there are no hiding places or dark corners.

To the left on entering, the visitor is impressed by the large and orderly arrangement of various hardware lines which are displayed in the wall cases and roomy shelving which have been provided for storage and display purposes. Guns and ammunition, both big selling lines in Western Canada, occupy a prominent position near the front of the store. Following the display of guns there is a splendid display of mechanics' tools, all in full view. Various lines of shelf hardware occupy the shelving to the rear of the tool department. Paint also occupies a very prominent position towards the rear, on the left side. Portable ladders are used to reach the high shelves. Two silent salesmen near the main entrance are used for displaying table and pocket cutlery, case goods, alarm clocks, plated ware, etc. To the rear of the silent salesmen, a table is used to display household lines including food choppers, etc. A special display stand is used for displaying mounted lock sets.

Near the paint department a display board is used for showing a wide range of paint brushes.

At the rear of the store, may be seen the harvest and garden tool department, where tools of various kinds are neatly and attractively suspended from large wall brackets.

To the right, in entering the store, is located the stove and kitchen utensil department. Almost one whole side of shelving is used for displaying enamelware, tinware, galvanized and aluminum ware, and various lines of kitchen utensils.

Stoves are prominently displayed on the side of the store. The office is elevated at the rear of the store and from this point a view can be secured of all sections of the store interior.

(Continued on page 47.)

HARDWARE & METAL

CANADA'S ONLY WEEKLY HARDWARE PAPER

Vol. XXVII. TORONTO, OCTOBER 16, 1915 No. 42

A BRIGHTER OUTLOOK

EVIDENCE that money from the new crop has begun to circulate is to be found in the fact that last week there was an increase in the bank clearings in Western Canadian cities as well as in the East. In Winnipeg this increase amounted to nearly $4,000,000, and several other Western cities also made good showings. Trade indications point in the same direction. For staple lines there is a marked increase in the demand from country districts, as compared with a year ago, although in the cities there is little change in the conditions. The marked improvement in the demand for staple hardware lines is an indication of this. Manufacturers of stoves and furnaces, also report business better than a year ago. Western retailers are replenishing their low stocks, and manufacturers in that country are buying more freely in view of the brighter outlook.

Last week figures were given out by the Department of Trade and Commerce respecting the trade for August, and they show an increase in practically every division with the exception of that of agricultural products. Mines, fisheries, forest, animal, manufacturers and miscellaneous exports, all show a substantial gain as compared with the figures of the previous year. From comparative figures it is noted that the export of manufacturers is more than double the figures for August, 1914, or those of 1913. Animal products show a total double the exports of 1913, and $1,000,000 in excess of those for August, 1914. The aggregate of merchandise exports is $48,998,484 as against imports of $40,832,822. It is thus quite evident that when our agricultural products begin to find their way across the Atlantic, our trade returns will show continuously increasing balance in Canada's favor.

A statement issued from official sources in Vancouver is to the effect that no less than 30,000,000 feet of lumber is being shipped on vessels especially secured for this purpose, this quantity represents slightly less than the total provincial exports for 1914. The pleasing feature of this business is the large proportion of low-grade lumber marketed. The timber sales in British Columbia recorded during the month of August cover an estimated total of 10,100,857 feet of saw logs, 85,000 lineal feet piles of timber, and 1,234 cords of pulpwood, cordwood, etc.

THE PAINT SITUATION

THE FUTURE of ready-mixed paints is a subject which is being discussed at considerable length by retailers at the present time. It is recognized that present prices are abnormally high, as a result of conditions which have prevailed since the outbreak of the war. During the fall there has been a reluctance on the part of retailers to order more than would meet immediate requirements. Manufacturers and retailers alike are awaiting an announcement regarding the future prices on ready-mixed paints, and it is not unlikely that something definite will be announced before the end of the present month, and that lower prices in ready-mixed paints will go into effect. That the price of paint to-day depends upon the cost of zinc is a statement which requires qualification, but the fact remains that the paint trade is to-day looking to the announcement of the producers of zinc in the United States as to the charges to be made for future supplies before a decision can be reached as to a reduction, or the extent of a reduction, to be made in the quotations on mixed paints. Under these circumstances a little light on the zinc situation is interesting. Prior to the war very little was said or heard about the zinc business. Then came the war, and now all things are changed. The zinc producer finds that he has an indispensable product in war times, and so he has become a factor in world events. Some of the largest smelting concerns have sold their entire output for this year and for several months in 1916 at prices higher than the prevailing figures, and the prevailing figures are beyond comparison with those at the opening of the war.

Before the war the world's production of zinc was 1,100,000 tons, and of this the United States produced 340,000 tons. Outside of Belgium and the United States, the entire world produced only about 25,000 tons. The United States will be unable to increase its production of zinc to 400,000

tons this year, although it will probably do so in 1916. Thus we see where the zinc producer of the United States occupies a very important position today in relation to the manufacture of munitions in America and in the European countries bound to the cause of the Allies. However, the opinion has been expressed that the United States will be able to keep pace in the output of zinc with the production of other raw materials essential for the welfare of the Allies, and if this is the case, the present prices will probably hold or decline. The abnormally high quotations which prevailed for a time during the war-fever demand for metals were obviously the result of manipulation and it is not likely that such a game can be played again.

THE RETAILER'S CONVENTION

IT IS almost certain that the 1916 convention of the Ontario Retail Hardware and Stove Dealers' Association, will be held at Toronto, and that the dates will be Feb. 22-23-24. At this year's convention held in February at Toronto, it was intimated that if the war were over before plans for the 1916 convention were made, the convention would be held at London, Ont., at the same time as the proposed hardware exhibition of the Canadian Hardware Manufacturers' Exhibitors' Association. Difficulty has been experienced in securing a building large enough to hold the mammoth hardware exhibit, owing to the fact that the military authorities are using the armouries and other large buildings for training and housing troops. The coming convention should be the most successful in the history of the association. President Conn, Secretary Macpherson, and other officers of the association, have accomplished a great deal since the last convention; both in securing new members and in creating a greater interest in the association on the part of individual members. The result has been that since February, 78 retailers and 41 travelers and clerks have been added to the membership. Many of the new members have joined as a result of the campaign carried on some time ago, in which the association services to members, and the new association price book, were offered as extra inducements.

EXPORT TRADE

IN THIS week's bulletin, issued by the Department of Trade and Commerce, the acting Trade Commissioner at Leeds, Eng., states that interviews with local merchants engaged in the iron and steel trade clearly indicate their desire to obtain, if possible, supplies of iron and steel goods from Canada. The stoppage of imports from European sources brought about by the war and the fact that the production in the United Kingdom is, to a large extent, being diverted to military purposes, has curtailed the supply for commercial use. Merchants hesitate to rely on United States firms owing, it is asserted, to the constant difficulties which arise in regard to deliveries when once an order has been placed. It is further intimated that if Canadian makers of such lines as steel wire rods, steel billets, copper or brass rods are able to land these goods at United Kingdom ports at prices which would compete with other sources, a unique opportunity now awaits them. With the approach of the season, the attention of Canadian oil-cake manufacturers may again be drawn to the prospects of trade with this market. So far this year, the United Kingdom has imported 257,672 tons of cotton seed, linseed, rape-seed, and miscellaneous oil-cake, and of this amount linseed cake was responsible for 42,339 tons. Last season, Canadian linseed cake was frequently quoted in market reports, and it is interesting to state that the annual imports from Canada during recent years have averaged 12,345 tons.

PORT OF MONTREAL

IN AN address before the New York State Waterways Association Convention held at Syracuse, N.Y., last week, Frank S. Ellsworth, secretary of the association, speaking on the subject, "The Commerce of New York," quoted figures to impress the businessmen of New York with the fact that New York as a port, in rate of progress, has been losing commercial supremacy. Canadian businessmen will be particularly interested in the reference made to the rapid expansion of the port of Montreal. The speaker contrasted the steady increase in the volume of grain tonnage handled through the port of Montreal since 1901, amounting to 68,897,394 bushels in 1914 over 1901, which was an increase of about 2,000,000 bushels in excess of the decrease shown in the grain tonnage of United States ports from 1907 to 1914, although the port of New York showed an increase of 22,481,119 bushels for the fourteen-year period. These conditions reflecting a decrease in the volume of grain tonnage handled at such ports as Boston, Baltimore and Philadelphia aggregating over 75,000,000 bushels from 1901 to 1914, Mr. Ellsworth said, should direct attention to the importance of emulating Canada's avowed policy to "conduct Canadian commerce through Canadian channels. There is a quiet struggle in progress, he continued, between Canada's principal ports and American Atlantic ports for commercial supremacy. This fight, Mr. Ellsworth declared, has been going on apparently without notice for a number of years, and one of the principal "preliminary engagements" was that successfully conducted by the New York Produce Exchange in 1910 and 1911 against the "practically prohibitive railroad rates on ex-lake export grain at and east of Buffalo." The contest, however, said the speaker, is no affair of a day, a month or a year, but is endless and calls for the most earnest thought, strategic ability and resourcefulness of the business men in the United States.

WAR ORDERS CONTINUED

(Continued from page 30.)

Field forges.

Miscellaneous tools.

The tools referred to embrace many varieties such as chisels, screw-drivers, vises, brass drifts, drills, shears, augers, hand hammers, punch-cutters, farriers tools, etc., etc.

The field forges have proven very acceptable to judge by the business which has been done and there are strong indications that the Canadian type supplied has met with favor.

The cement sacks referred to numbered about 8,000,000 and were secured from the Canada Cement Company.

Unfruitful Negotiations

While negotiations started from this side of the Atlantic have resulted in considerable business there have been a great number of articles which have been brought to the attention of the British authorities which have not yet figured in the orders placed. However, this information will be on file and should the need arise Canada should figure in the business developing. Mr. Fitzgerald states that there is on this list some forty items including tinned fowl, woolen manufacturers, etc., etc. It is the desire of the purchasing agent to get into touch with every manufacturer who may think that he is capable of turning out useful war supplies of any kind and he will at once place his proposition before the officials of the War Department.

How Orders Are Placed

In connection with the placing of orders, Mr. Fitzgerald explains that in practically every case there is a sealed sample submitted with the requisition but that it is not always possible to exactly duplicate it. He usually calls for samples and if it is found that similar products cannot be secured he submits what he considers to be a good substitute and if this is satisfactory orders are accordingly placed. In other cases business has been developed as the result of the initiative being taken on this side and then it is not a case of trying to duplicate a sample but of sending something that will be favorably passed upon.

PLANNING FOR RETAILERS' CONVENTION

(Continued from page 32.)

Price List is a move in the right direction and fills a long felt want."

W. C. Johnson, Fort Frances, Ont.—"While the Price Lists are not altogether suited for our trade, we will be able to use most of them to our best advantage. Kindly send more letter forms 1 and 2, same as we received from you before."

R. H. Bradfield & Co., Morrisburg, Ont.—"These lists we find very convenient for checking up invoices; every hardware merchant should have them, they will save him money. Thanks to you."

Sylvester Bros., Stouffville, Ont.—"We appreciate the lists very much; wishing you every success."

Eugene A. Lapierre, Buckingham, Que.—"Lists received are very highly appreciated and will be a great help in retailing the different lines mentioned."

Frank R. Jackson, Toronto, Ont.—"We feel that the lists you are supplying fill a long-felt want, particularly for the small, busy hardware man, who finds it hard to keep and make lists for himself without outside help. Your Association, in publishing these lists, is showing a business-like co-operation that should deserve the hearty appreciation of all its members."

Brocklebanks, Ltd., Arthur, Ont.—"This work is one of the best the O. R. H. and S. D. A. have done. Will look forward to the receipt of other lists."

John Caslor, Toronto, Ont.—"The Price Lists should bring in some members; they are very handy; ought to pay for themselves."

C. Caswell, Straffordville, Ont.—"Lists received, am sure they will be very useful."

Brownlee & Atkinson, Unionville, Ont.—"This is a splendid book."

Merrill & Hubbard, Barrie, Ont.—"No one can say the O. R. H. and S. D. A. have not accomplished anything. We are putting the lists in use at once, and hope to receive the others as they are prepared. Accept our thanks for same."

J. Henry & Son, Orono, Ont.—"They are certainly going to be a great help to us; wishing you and the Association every success."

St. Mary's Hardware, St. Mary's, Ont.—"First class; will be able to use them every day."

Young & Cross, Hanover, Ont.—"We thank you for Price Lists and folder."

Frank Dafoe, Madoc, Ont.—"Note you are preparing other Lists and trust in time you will get out lists for practically everything that is not easily marked. After looking over lists received, I hardly think more than the above suggestion is necessary, unless it would be that I consider the lists worthy of a better binding."

Hermiston & Comrie, Cornwall, Ont.—"They are very good, and worth price of membership fee."

F. C. Bishop, Horwich, Ont.—"We received Price Lists and are very much pleased with the same."

Campbell's Bay Hardware Co., Campbell's Bay, Ont.—"Price Lists have been of some asistance, but we find your Collection Letters to be of much more moment. We have received good results from a fair trial of Nos. 1 and 2 letters."

Hodson Hardware Co., Maple Creek, Sask.—"We received Price Lists and forms in connection with your Association and might say that we find them very valuable to any retail dealer, and it seems to us that your members get a lot for three dollars."

Fowler & Winsor, Sudbury, Ont.—These forms reflect great credit on the parties forming same, and think that they could not be more complete."

McNab Bros., Orillia, Ont.—"These lists look pretty complete and certainly will be a great convenience to the retail merchant and well worth the price of the Association fee, if nothing else."

F. S. Hendershot, Mount Forest, Ont.—"Price Lists were duly received, and I feel they are going to be a great help, although I will be better able to speak of them a little later. If we had something similar in pipe fittings, I would like it."

Wright's Hardware, Hamilton, Ont.—"You are to be congratulated on being able to place in the hands of the members of our Association so complete and satisfactory a list. We feel that our membership fee has been returned to us two-fold."

R. A. Wells, Dresden, Ont.—"I am well pleased with the Price Lists I received. They are good for all hardware men and will greatly assist in helping to maintain one retail price."

Bernhardt & Spalding, Preston, Ont.—"Price Lists received; we have put same into use and find them very satisfactory. If the same could be extended to cover all ordinary tin-shop fittings, and especially steam and plumbing fittings, it would be a big help to the majority of us."

FORMIDABLE AXES

Modern Soldiers Use Implements Akin to Those of Crusaders

In connection with the orders for axes which have been placed in Canada for the British War Office it is stated that a great proportion of them have been of a hammer-headed type. These are indeed formidable looking implements, and are somewhat similar in design to the battle axes of the Crusaders. However, they are not useful for the same purpose in the days of modern warfare and are being used by the troops in France for the destruction of barbed wire entanglements and other obstructions. The head rises above the handle centre with the blade below, but it is broad and very thick as compared with the usual hammer-headed hatchet and is evidently intended to add weight to the swing. The axes secured in Canada were from Canadian makers in practically all of the Eastern Provinces.

Sheet Metal Workers Course

Article No. 54. By Charles Sievers

IN this article is shown how the patterns for a round to oblong offset are developed. There are several methods, more or less complicated, but the student will find this method very simple, and with fewer useless details to trouble him.

First of all, the elevation must be drawn to exact size, as shown in Fig. 1, and the usual method followed out for developing the large round piece and small oblong piece as is followed when developing the regular elbow patterns.

Possibly, however, some of our readers would be interested in having full and complete instructions. Therefore, the next step to follow will be to draw the two lines A, B, C, D, E, F, which are part of the elevation, from these lines drop other lines at right angles with which to draw the two plans.

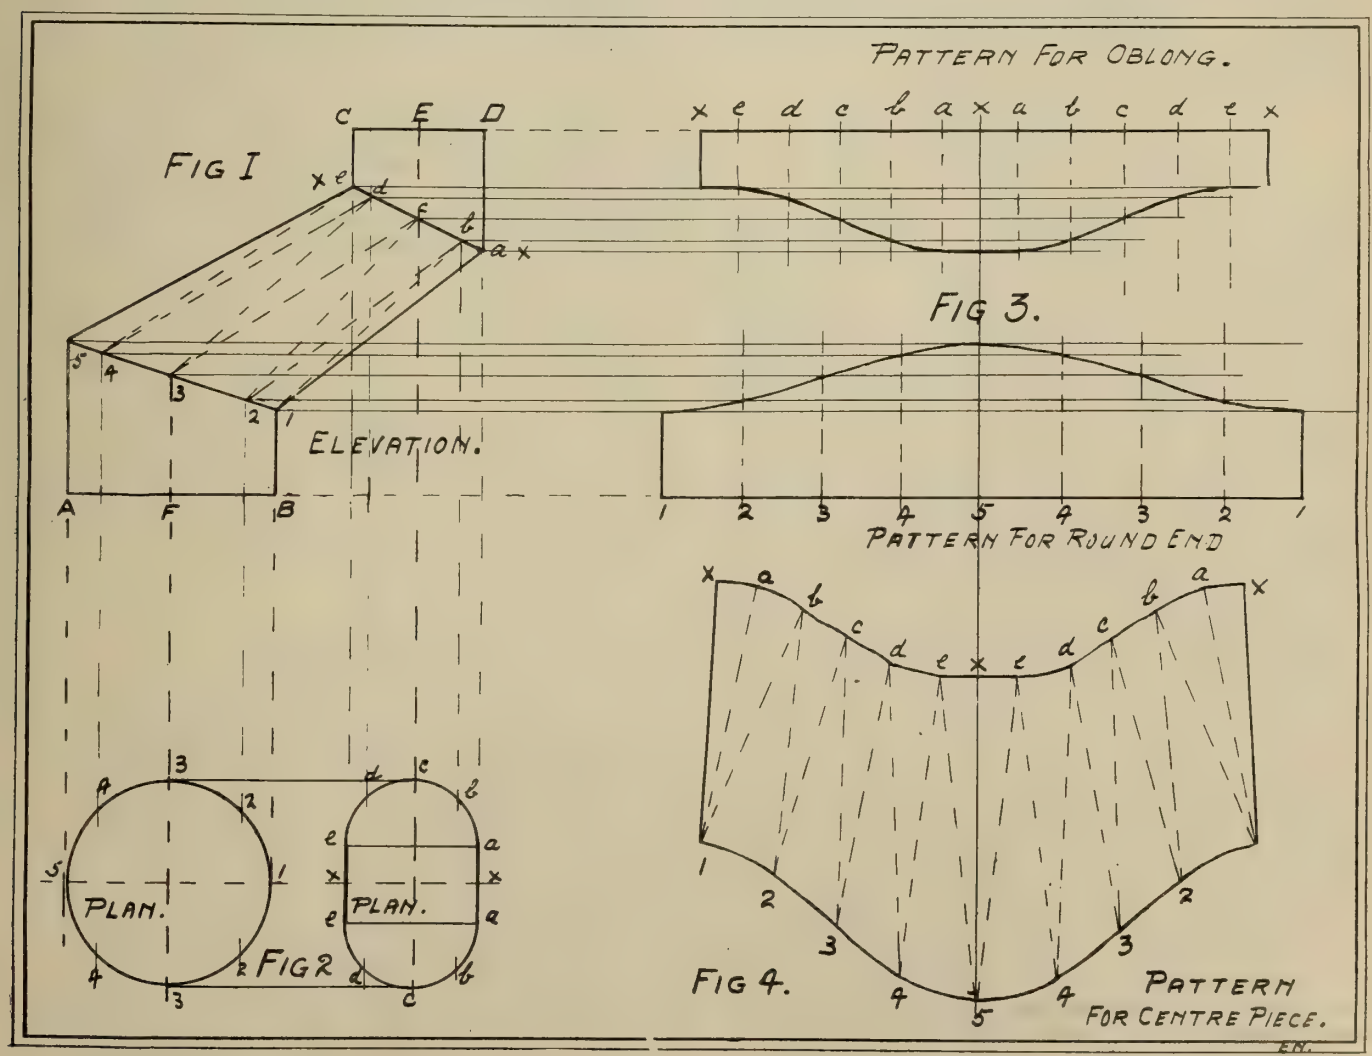
It would be complicating matters to attempt to draw plan of centre piece, and as it is really not necessary we will proceed with the patterns.

Divide the plans (Fig. 2) off as shown at 1, 2, 3, 4, 5 for the round large end and a, b, c, d, e and x in oblong plan. It will be seen in the latter plan that between e, x, e and a, x, a are two straight portions, the rest of the plan is two true half circles.

From x, a, b, c, d, e and 1, 2, 3, 4, 5 must be drawn a number of straight lines parallel to each other as shown from the mitre lines in Fig. 2 to Fig. 3, and extend the solid lines C, E, D and A, F, B, the two latter lines being base lines for patterns of oblong top and round bottom pieces.

Now transfer the various measurements which are shown and marked off in the two plans Fig. 2, beginning at X in the centre of Fig. 3, and working to each

(Continued on page 47.)



What Other Papers Say

Items of Interest From Other Papers—In Each Instance Credit is Given to the Paper From Which the Item is Taken—Go Slow—Trade and the War in Australia —A Chance for Efficiency

GO SLOW

From New York Commercial.

RUMOR whispers that the Chicago packers whose cargoes of meat were seized and condemned by a British prize court do not wish the Federal Administration to make too strong a protest to the British government. They fear that the British government may withdraw its patronage and leave them worse off than ever. They have invested large sums in Argentina packing houses and they have already been taught that they depend absolutely for transportation on British shipping and that the British government can by a single word leave their meat on their hands five thousand miles away from their market. Too much "bluffing" and too many changes in position have weakened our case in regard to these meat shipments and our Department of State evidently believes that the grounds of complaint are not sure. Some American exporters have been tricky, as witness rubber in cotton bales and ingots of copper in flour barrels; and they have furnished the Allies with all sorts of excuses for holding up shipments from the United States. As in the rubber cases, a few sharp practitioners have seriously injured the interests of the whole country and have tied the hands of our President and his Secretary of State.

A CHANCE FOR EFFICIENCY

From New York Journal of Commerce.

THERE has been a good deal of illumination of late on the value of efficiency, of which a vivid exhibition has been before the world for some time and a special opportunity is now presented for the United States. At a meeting of the New York section of the American Chemical Society the other evening the president of a chemical manufacturing company predicted that when the European war was over there would be an extensive demand for benzol as a substitute for gasolene. The demand for war purposes has resulted in a large increase in its production in this country. Steel works which never before took the trouble to recover it from by-products are now disposing of large quantities at high prices. The stimulus has no doubt come from the high prices caused by the exceptional demand, but this speaker expressed the belief that the increased production will continue, and at normal prices benzol will be used largely for the manufacture of other products which will develop with it, so that the "German domination" in this product will be "a thing of the past."

Another speaker at the same meeting, who is engaged in the manufacture of paints, varnishes, colors and enamels, told of the rise that had taken place in the barium industry since the outbreak of the war in Europe. When the supply of this material from Germany was interrupted it was discovered that the mineral from which barium is derived could be obtained in liberal quantity from certain lands in Tennessee. Speedily works were established which have been engaged night and day for months in supplying the material for the color works. A very hopeful view was taken of the possibilities of development, but —the speaker is quoted as saying—"owing to the economic differences between Europe and America" it was imperative that tariff protection be given the new domestic barium industry, "as well as an adequate anti-dumping law." Now why this everlasting plea for "protection"? Capital and labor and science and skill are no longer infants in this country, and, while competition in the industry is in abeyance, why not show what efficiency will do in the new field? It is to that that Germany owes every superiority she has attained in industrial activities and not to protection. Economic differences are mainly what people make them. Pleading the baby act for industries is getting tiresome.

TRADE AND THE WAR IN AUSTRALIA

From Australasian Hardware and Machinery.

ELSEWHERE in this issue we deal with the effects of the Great War upon trade and industry throughout Australia and New Zealand. The general position as revealed by the statisticians of the two countries is checked and illustrated by information from men handling hardware and machinery in different parts.

After 12 months of strife, what is the position here? To what extent has this greatest war in human history affected the commercial life of these distant but participating countries? So far as Australia is concerned, it is not easy to answer that question, for in addition to the struggle abroad the country has had to face a severe drought at home, and a due apportionment of the results is quite impossible. But this much is clear, that business goes on with remarkably little difference. The volume is considerably reduced, but so far there has been little in the way of makeshift or deprivation. Many imported articles are difficult to obtain, and cost a good deal more. Metals and other heavy lines are a matter of 50 per cent. higher, and shelf goods 15 to 20 per cent. higher in price. Transport is less reliable and more expensive. The goods hitherto imported from Germany and Austria-Hungary are being obtained from different quarters, most of them from British countries, including Australia and New Zealand themselves, some from allied countries like France and Japan, and some from neutral countries like the United States and Scandinavia.

COBALT PLATING

From Saturday Evening Post.

NEW colors for cloth which may catch the fancy of fashion and make fortunes for the discoverers are constantly sought by the chemists, and to some extent new metal finishes are sought for somewhat similar purposes. A new metal finish of this kind is cobalt plating, as a variation from silver and nickel-plating. The cobalt plate polishes white with an attractive blue tinge.

Plating with cobalt has been considered very difficult, but recently some Canadian chemists, who have undertaken to develop new uses for this metal, worked out some practical methods of operation and found the scheme to be economical as well. Their formula they have made public, and already cobalt plating is being tried out by various manufacturers on automobile parts and hardware.

THE JUNIOR CLERK'S PAGE

Business Based on Reputation

By Dr. Orison Swett Marden

A LARGE part of the business of the world is based on reputation. Bankers make loans, or refuse them; jobbers give credit or refuse it, largely on a man's reputation. Is he reliable? Can you depend on his word? Will he do as he agrees? These are vital questions on which credit is based.

A well-known bank president says: "Millions of dollars are loaned on character, for there are men of such high standing, though not rich in this world's goods, that they will not borrow more than they can repay."

Another banker says he would rather lend money to the honest poor man, than to the rich knave who could give substantial security.

I know two young business men who have very little property, but who have a credit of a quarter of a million dollars because their bankers believe in them. They bank upon their character and their ability to succeed more than upon the assets in sight. Their known honesty and their reputation as hustlers, indefatigable workers, is worth more to them as capital than many thousands of dollars in cash.

"It is the judgment of your contemporaries that is most important to you," says Charles W. Eliot, ex-president of Harvard University. "It is made up in part by persons to whom you have never spoken, by persons who in your view do not know you, and who get only a general impression of you; but always it is contemporaries whose judgment is formidable and unavoidable."

During the Civil War in America, when General Lee was consulting one of his officers as to a certain movement of his army, a farmer's boy overheard the general remark that he had decided to march on Gettysburg instead of Harrisburg. The quick-witted boy at once telegraphed the fact to Governor Curtin. "I would give my right hand," said the Governor, "to know if this boy tells the truth." A corporal replied, "Governor, I know that boy. It is imposible for him to lie. There is not a drop of false blood in his veins." In fifteen minutes the Union troops were marching toward Gettysburg. The world knows the result.

There is nothing like a clean record, the reputation of being square, absolutely reliable, to help a young man along. There is nothing comparable to truth as a man builder. Nothing else will do more toward your real advancement than the resolve in starting out on your career to make your word stand for something, your signature to mean something, to always tell the truth, whether it is to your material interest or not. Truth and honesty make an impregnable foundation for a noble character.

Running through a list of genuinely great characters at random, we always find there is a strong backbone of purpose in them. We sense the temper of their manhood, the stamina of their character. We sense the great moral force in them, regardless of ther vocations, something which they consider more sacred than money making, business considerations, or even life itself. When talking with them you feel they cannot be bought, they are not for sale. You know well that it would be useless to try to bribe them or to influence them, for they stand on the bedrock of principle, immovable as the Rock of Gibraltar. Such characters are the salt of civilization.

Some of the world's noblest characters have sacrificed their all for principle, and for its sake many have cheerfully gone to the stake and to the gallows.

Things are so planned in the moral universe that in order to get very far, or to accomplish very much in this world, a man has to be honest. The whole structure of natural law is pledged to defeat the lie, the deceit, the sham. Ultimately only the right can succeed, only truth can triumph. The whole lesson of life goes to show that no amount of smartness, of brilliancy, of scheming, or long-headed cunning, can take the place of downright honesty, or be a substitute for personal integrity.

When Marshall Field was burned out in the great Chicago fire, while his store with all he possessed lay in ashes, Eastern financiers telegraphed him to draw on them for what he wanted. The fire which destroyed Chicago could not burn up the reliability that stamped his character. His name was a synonym of honesty.

When young Field, a poor farmer boy, began to build up what ultimately became one of the greatest merchandise concerns in the world, he had no other capital than honesty. With this he started to do business in a perfectly legitimate way, without any chicanery, without cunning or deceit, without misrepresentation or falsehood of any sort. He declined to have anything to do with questionable trade methods, or illegitimate "get-rich-quick" schemes. His ambition was to sell goods for the smallest possible profits, to cover up nothing, to hide nothing. No one in his employ was permitted to misrepresent or cover up anything. A clerk who misled a customer for the sake of making a sale was discharged, no matter how advantageous for the time being that particular sale might have been for the house. He knew that, despite the profit made out of the transaction, a deceived or dissatisfied customer would be a perpetual enemy to his house, and might be a great injury to his business.

This was why customers flocked to buy at Marshall Field's store. They knew they would get a "square deal." They knew that if there were anything wrong, if anything had been misrepresented by clerks, if for any reason they were dissatisfied with their purchases, the house would make it right, for that was the Marshall Field policy.

There is something about honesty of purpose, truthfulness and sincerity in our friendships, in our lives, in our vocations, in our dealings with others, that compensates for deficiencies or lacks in other directions. Even though we have but one talent and fill a very humble station in life, integrity of character helps us upward, because it gives mental stability and public confidence; without these, success in any direction is impossible.

There are multitudes of people in the world who have no bad habits and yet they do not amount to anything. They are flat, insipid, flavorless, people; they carry no weight. They are too negative to make any impression on their community.

Men who amount to anything in the world, who stand out distinctively, must have force of character, a strong positive individuality. This can only be gained by persistent, vigorous doing of the right,

(Continued on page 41.)

EVENTS IN THE TRADE

Hardwareman Married

Swift Current, Sask.—J. H. Gray, hardware merchant of Viceroy, Sask., was married recently to Miss Janet Annie Woods, of Milestone, Sask.

New Hardware Firm

Renfrew, Ont.—The hardware business carried on until recently by W. A. Moore has been sold. Messrs. Harry Totten and Adam Lindsay are the new proprietors.

To Make Scythes

The James Smart Mfg. Co., Brockville, Ont., has purchased the right to manufacture and sell in Canada Bartlett All Steel Scythes. The scythes are made in a variety of styles and sizes.

To Build Magazine

Fredericton, N.B.—Messrs. R. Chestnut & Sons have applied to the city council of this place for authority to erect a building, to be used as a magazine for explosives.

Lead Mines Reopen

Kingston, Ont.—The properties of the North American Smelting Company, which consist of lead mines near Kingston, have been sold, and it is understood that the mines will shortly be opened up again, after a suspension of work for about two years.

Business Change

Southampton, Ont. — After twenty years in the retail hardware business at this place, W. H. Johns has disposed of his interest to Messrs. Trelford Bros.

N. Y. Trelford was associated with Mr. Johns for a number of years in connection with the hardware business.

Join the Colors

A number of the members of the staff of Beatty Bros., Fergus, Ont., are serving the Empire at the front. Two more have joined recently, W. Ayerst and A. Sullivan have enlisted with the 71st Battalion. Word has been received that Bob McNally, who previous to enlisting had traveled for Beatty Bros. in the Maritime Provinces, is in the hospital at Shorncliffe.

Leased New Store

Sydney, N.S.—Bent & Cohoon, of North Sydney, whose large store was burned about two years ago, have leased a new stand on Commercial street, and are opening out a full line of general hardware. Mr. Cohoon, the manager, has been in the hardware business for thirty years, the firm commencing in New Glasgow in 1885. Subsequently they opened a branch in North Sydney in 1899, which they successfully operated till their unfortunate fire two years ago. Mr .Cohoon has been a reader of Hardware and Metal ever since it was first published.

Obituary

Renfrew, Ont.—The death occurred here recently of J. E. H. Barnet of the Barnet Mfg. Co., manufacturers of refrigerators, etc.

Hardware Burglarized

Guelph, Ont.—The Blue Hardware Store was recently visited by burglars. Cutlery seems to be the line most sought, as the stock of razors (about 78) was entirely cleaned out. A number of knives and revolvers were also taken, as well as $10 in cash.

Dominion Incorporations

Roelofson Machine and Tool Company, capitalized at $50,000, incorporated to deal and act as brokers of machinery and other products; head office, Toronto, Ont.

Canadian Tygard Engine Co., capitalized at $3,000,000, head office Toronto, Ont., to manufacture engines, motors, machinery and hardware specialties.

Universal Appliance Manufacturing Company, capitalized at $150,000, incorporated to manufacture automobiles, motor cycles, etc.; head office at Toronto, Ont.

Personal

George Henderson, president and general manager of Brandram-Henderson Co., was in Toronto during the week on business.

C. W. Conn, Tillsonburg, Ont.; H. Occomore, Guelph, Ont.; W. F. Macpherson, Prescott, Ont., were in Toronto this week attending a meeting of the Advis ory Committee of the Ontario Retail Hardware & Stove Dealers' Association

Douglas Carter, son of H. J. Carter, of Carter Bros., Picton, has joined the travelling staff of Lewis Bros, Montreal. Mr. Carter, although a young man, has had many years' experience in the retail hardware trade. Mr. Carter will work Eastern Ontario between Kingston and Whitby.

Death of Charles Stewart

Hamilton, Ont.—The death occurred here recently of Charles Stewart, vice-president of the Burrow, Stewart & Milne Co., stove and scale manufacturers. Mr. Stewart was only ill for a brief period, and held the office of vice-president until his death. The late Charles Stewart was born in Paterson, N.J., on October 14, 1837, and moved with his parents to Hamilton about the year 1843. He served his apprenticeship as an iron moulder with the old firm of Fisher & McQueston, whose foundry was on the present site of the Sawyer-Massey Co. After working at his trade in various places in Canada and the United States he returned to Hamilton, and, in the year 1864, entered into partnership with John Milne and the late William Burrow, and, under the firm name of Burrow, Stewart & Milne, began business in small premises on Caroline Street, near York Street.

The three partners were all practical iron moulders, and began as manufacturers of grey iron castings, and put in a plant for the making of malleable castings, to which part of the business the late Mr. Stewart gave special attention. After thirty-four years, that is in the year 1898, when the business had greatly expanded, the present joint stock company, the Burrow, Stewart & Milne Co., was incorporated.

Mr. Stewart was of a quiet and retiring nature and took no active part in politics or public affairs, devoting his attention to his business and his family. He will be greatly missed by large circle of friends, who appreciated his sterling character and his kind and genial disposition. Mrs. Stewart predeceased him in 1904. He leaves two sons, John W. and Russell, both connected with the Burrow, Stewart & Milne Co., and three daughters.

The Union Twist Drill Co., Rock Island, Que., has let contract to Loomes & Dakin, Sherbrooke, for the erection of an addition to its plant at this place.

Lieut.-Col. Frederic Nicholls has been appointed acting president of the Dominion Steel Corporation on account of the continued indisposition of the president, T. H. Plummer.

Hardware Letter Box

Coal Chutes

McKinley & Northwood, Ottawa:—Kindly give names of makers of coal chutes.

Coal chutes are made by Manitoba Bridge & Iron Works, Winnipeg, Man.; Galt Stove & Furnace Co., Galt, Ont.; Steel Trough & Machine Co., Tweed, Ont.—Editor.

Ferrules

R. Dillon & Son, Oshawa, Ont.—Kindly let us know who manufactures iron or steel ferrules in Canada.

Ferrules are made by H. Mueller Mfg. Co., Sarnia; Welland Vale Mfg. Co. St. Catharines; Canada Axe & Harvest Tool Mfg. Co., Montreal; W. H. Banfield & Sons, Toronto.—Editor.

Bells

A. M. Bell & Co., Halifax, N.S.—Kindly give addresses of makers of bells such as are used on fire engines.

Fire department and ship bells are made by Jas. Morrison Brass Mfg. Co., Toronto; Lumen Bearing Co., Toronto; L. H. Piper & Co., Montreal; C. O. Clark & Bro., Montreal; Wilson & Cousins, Toronto.—Editor.

Steel Coal Chutes

Alf. Outram, Port Hope, Ont.—Kindly advise who makes steel coal chutes to take the place of a cellar window.

Coal chutes are made by Galt Stove & Furnace Co., Galt, Ont.—Editor.

Mallet Locks

Fraser Hardware Co., Galt, Ont. — Kindly advise name of maker, and representative of firm making lock marked "Mallett."

Josiah Parkes & Sons, Union Works, Willenhall, England, manufacture locks marked "Mallet." Thos. W. Kirby, Yonge St. Arcade, Toronto, represents the manufacturer and can secure repairs, etc.—Editor.

Kitchen Chef Range

E. Boucher, Saint Hyacinthe, Que.—Please give name of maker of "Kitchen Chef" range.

The "Kitchen Chef" range is made by the Record Foundry & Machine Co., Moncton, N.B.—Editor.

Angle Lamps

Frank A. Child, Cochrane, Ont.—Please let me know who sells angle lamps in Canada.

Angle lamps are carried in stock and sold to the trade by E. Boucher, St. Hyacinthe, Que.—Editor.

Water Meters

J. S. Demers, Thetford Mines, Que.—Kindly supply names of firms making water meters.

The following firms manufacture water meters:—Aldberger Pump & Condenser Co., 140 Cedar street, New York, N.Y.; Builders' Iron Foundry Co., Providence, R.I.; Canadian General Electric Co., Toronto; Elliott Co., 6908 Susquehanna St., Pittsburg, Pa.; Hamson Safety Boiler Works, Philadelphia, Pa.; Happes Mfg. Co., Springfield, Ohio; Liberty Mfg. Co., Pittsburgh, Pa.; Neptune Meter Co., 90 West street, New York, N.Y.; Buffalo Meter Co., 290 Terrace, Buffalo, N.Y.—Editor.

Hickory Handles

Subscriber, Calgary, Alta (name on request).—Kindly give names of manufacturers of hickory handles for axes, picks, hammers, etc.

Handles are made by J. H. Still Manufacturing Co., St. Thomas, Ont; Lachute Schuttle Co., Lachute Mills, Que.; Canadian Handle Mfg. Co., London, Ont.; St. Mary's Wood Specialty Co., St. Mary's, Ont.; E. B. Salyerds, Preston, Ont.—Ed.

Cattle Sprayers

R. T. Holman, Summerside, P. E. I.—Kindly give names of makers of sprayers for spraying cattle.

The following firms manufacture sprayers: E. T. Wright & Co., Hamilton, Ont.; Collins Mfg. Co., Toronto, Ont.; Sheet Metal Products Co., Toronto; Eureka Planter Co., Woodstock, Ont.; Thos. Davidson Mfg. Co., Montreal; Spramotor Co., London, Ont.; Cavers Bros., Galt, Ont.—Editor.

Trade Inquiries

The Department of Trade and Commerce has received the following inquiries relating to Canadian trade. Addresses may be secured from the Department, or from the Editor, Hardware and Metal, Toronto, Canada. Please quote reference number when requesting addresses.

1096. **Ironmongers' supplies.**—A British firm will consider quotations delivered Birmingham on washboards, rope, twine, nuts and bolts, screws and wire nails.

1098. **Nuts and bolts.**—A Birmingham firm asks for quotations on the following specifications of tire and sleigh bolts and nuts, packed in parcels or cartons of 100, and delivered Liverpool:—

Sleigh bolts and nuts.—1¼, 1½, 1¾, 2, 2¼ in. x ¼ in.; 2½, 2¾, 3, 3¾, 3½, 4 inch x ⅜ inch. 6 m/m x 60 m/m, 6 m/m x 50 m/m—1½, 2, 2¼, 2½ x 5-16. All black.

Tire bolts and nuts.—2½ x 5-16, 2¾ x 5-16, 3½ x 5-16, 3¾ x 5-16, 4 x 5-16, 4½ x 5-16. All black.

1099. **Tools, etc.**—A British firm is open to buy the following: Mechanics' hand tools, pliers, grips, ropes, twines, wire nails, wire fencing and leather belting. Prices should include delivery Liverpool or Birmingham.

1100. **Fencing wire.**—A firm in Birmingham inquires for the following fencing wire, price to include delivery to Buenos Aires: Best drawn round galvanized steel fencing wire, in rolls of 40 kilos, assorted to—9 gauge x 480 metres; 10 gauge x 610 metres; 11 gauge x 743 metres; 12 gauge x 930 metres. In close bundles, without canvas, each bundle to contain one continuous piece of wire. The breaking strain of the wire should be 35 tons square inch. Small sample must be submitted.

1101. **Aluminium.**—An English firm inquires for 30 to 50 tons of aluminium sheets, 7 feet x 18 inches x 30/32 gauge. Prices should include delivery Liverpool or Bristol.

1107. **Barbed and other wire.**—A London firm asks for the addresses of Canadian manufacturers of barbed and other wire.

Hardware and Metal has received a letter from a manufacturers' agent at Brisbane, Queensland, who invites correspondence from Canadian manufacturers desiring representation in Queensland, Australia.

A manufacturers' agent leaving for England would like to represent Canadian hardware manufacturing firms.

BUSINESS BASED ON REPUTATION

(Continued from page 39.)

not merely by refraining from doing the wrong. It is the positive virtues, the vigorous resisting of temptation, the doing of things, the standing up for principle in spite of opposition, that makes force of character. Positive, not negative righteousness is what counts. A negative character may be virtuous, but he can not be strong.

It is of the greatest importance that a man who has no capital excepting what is inside of him should early establish a reputation for having certain winning qualities. Until he has done this, no matter how brilliant he may be, he is at a certain disadvantage. When he has shown that he is honest, reliable, that he has principles and proposes to live up to them; when he has shown that he has courage, grit, pluck and that he is not afraid to fight for truth and justice; when he has proved that he thinks more of always being found on the right side of any question than on the winning side, he will get people's confidence and admiration.

NEW HARDWARE GOODS

OFFERED TO CANADIAN HARDWAREMEN

COMBINATION JACK

The Rub On Mfg. Co., Brayton Street, Buffalo, N.Y., offers to the trade the new combination jack, auto turn jack, and towing truck, here illustrated.

The makers claim that the combination jack is the biggest time-saver and

The Combination Jack

the most convenient article in the garage, also that the cost is not as great as that of a turn-table; yet the combination jack will turn cars more easily and quickly than a turn-table. It is said that this jack is adapted to moving cars anywhere about the garage, no matter how cramped the space. It is also claimed that the heaviest car can be easily and quickly handled by one man by the use of combination jack. It is also convertible, and can be used as a towing truck, three minutes being the length of time required to change, when needed to tow in a disabled car. One upward movement of the small hand lever raises the lifting post up against any height of axle. In turning the car, it is claimed that the "Jack" handle will pass under the raised wheel clear back to the running board if desired.

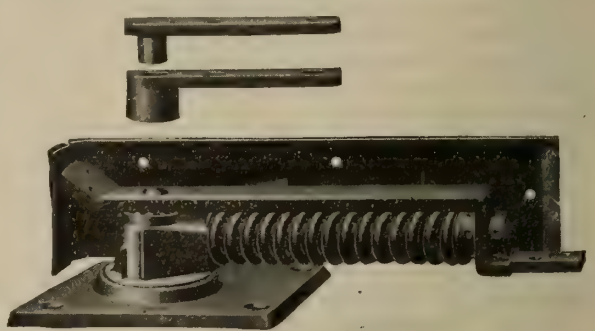
The makers state that it is almost impossible to get out of order. The castings are made of refined malleable and are fully guaranteed. Further details can be secured from the makers.

THE "LAZCO" ENGINE TROUBLE DETECTOR

The Lazarus Mfg. Co., 746 Euclid Avenue, Cleveland, Ohio, is offering to the trade the new "Lazco" engine trouble detector. It is claimed that this device will immediately determine and notify the driver of a car of the location and nature of any irregularities of his engine. Misfiring cylinders, carbonized or broken spark plugs, lack of compression, broken or loose wire connections, knocking in cylinder, magneto troubles, etc., are claimed to be automatically determined by investigating with this attachment without leaving the seat or raising the hood. The dial of the "Lazco" engine trouble detector is attractively made up in a nickel-plated case, which is quickly attached to the dash of an automobile, and through a single hole in the dash the numbered terminal wires are connected to the various cylinders.

This attachment can be furnished for four, six, eight, or twelve-cylinder automobiles. Its compact construction, it is said, does not detract from the appearance of the dashboard.

The makers claim that this device will effect the saving of many dollars in repair bills to the auto owner, and also a great saving in time devoted to engine repair by the driver who makes his own repairs. In the case of misfiring cylinders, the most experienced mechanic has to use a system of elimination to locate the trouble, and very often results in the car being laid up when it is perhaps needed the most. It is said that with a "Lazco" detector, these troubles may be quickly determined from the driving seat, investigating each cylinder in turn by means of the adjustment lever on the Lazco dial. Further details can be had from the makers.

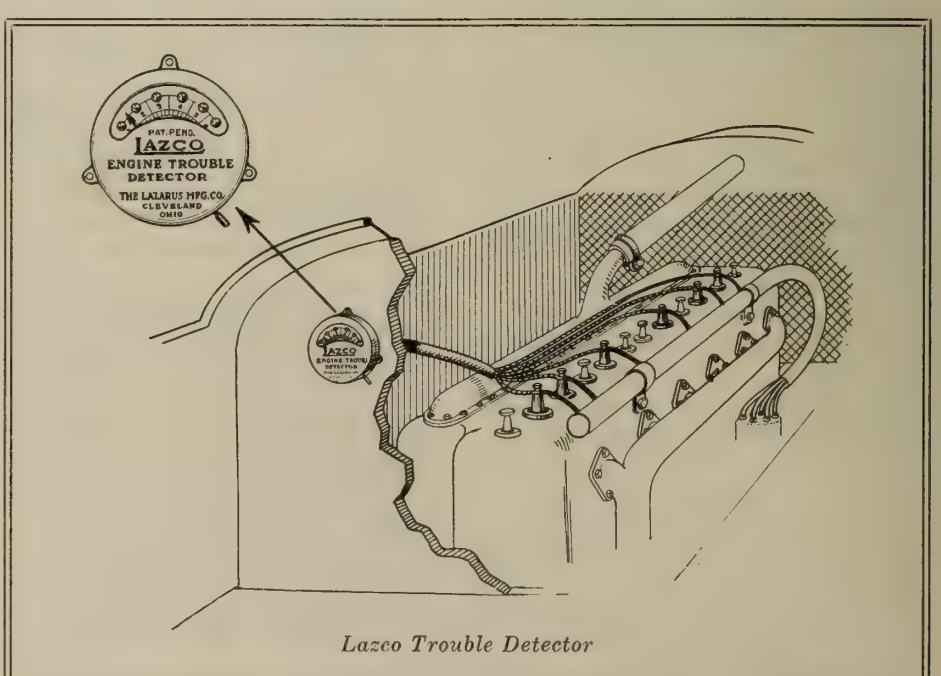


Richards-Wilcox 615 Spring Hinge

NO. 615 SPRING HINGE

Richards-Wilcox Canadian Company, London, Ont., offers the trade a new product in the No. 615 R-W surface floor spring hinge for doors 1¼ in. to 1¾ in.

(Continued on page 47.)



Lazco Trouble Detector

WEEKLY HARDWARE MARKET REPORTS

STATEMENTS FROM BUYING CENTRES

The Markets at a Glance

The recent warm weather has had a tendency to temporarily halt the demand for fall and winter lines, which last week were moving fairly well. However, with the advent of cooler weather which will no doubt arrive shortly, the demand for fall and winter goods will be greatly stimulated. Stove and furnace manufacturers report that there is a fair demand for stoves and furnaces, and improvement in the demand for the latter, from country districts, has been noticed of late. The sheet market is very unsettled and there has been considerable price-cutting on some lines.

Linseed oil is firmer, although the demand is almost nil. Ready-mixed paints are moving fairly well, but retailers are only buying for immediate needs and lower prices in the near future would not be unexpected.

The demand for steel for munitions is steadily increasing and the mills are working to capacity. The probability of 60 and 180-pounder shells being made in Canada will further stimulate the steel trade. Domestic business is very quiet, and owing to prevailing conditions, few new enterprises are being started, except for the manufacture of munitions.

MONTREAL

MONTREAL, Oct. 14.—Unseasonably fine weather with high temperatures has had the effect of checking to some extent the late fall and early winter booking and has also had some influence upon the re-orders for ammunition. Altogether, however, the hardware trade, particularly in the country, continues to be very satisfactory and the movement of goods shows substantial improvement on a year ago. The bulk of the business is in general hardware of a staple character and, although the country is the big factor, there is some improvement in the city, the extent of the latter being a matter of opinion as betweeen different wholesale houses. Stove dealers are still doing a fair business, although the warm weather has to some extent checked the demand. In paints there is no improvement over the recent slow conditions, but it is accepted that stocks have been run very low and that there should be an active interest following the announcement with regard to prices on mixed lines; this announcement is looked for about the 25th inst.

Price changes have not been very important and many are, in fact, more in the nature of adjustments as between different interests. In this respect the market has been very hard to follow ever since the outbreak of the war, as the influence of the current conditions is offset by the fact that firms with cheap stocks on hand are sometimes willing to cut prices to realize and encourage consumption. The metals are comparatively steady, a decline of 1c on solder and a small advance on sheet zinc with another jump in aluminum, being the only definite changes. Material advances on brass and copper products are recorded and on black sheets and Canada plates there is a considerable spread between the Association figures and some of the independents. Iron and steel have well maintained the higher level which was taken a week ago.

Tin.—The local market of 41c to 42c is maintained, but the tone is weak. On the other hand there has been a slightly stronger tendency recently in New York, where there has been a net advance of ½c since the first of the month. New York, however, at last reports was in an uncertain market frame of mind. London failed to advance in the early part of the week as expected and, with no further news about an export duty, the outlook is vague.

Spelter.—Spelter is weak locally at the old quotations of 19c-20c. Outside markets are also weaker and New York has fallen off about 1c since the first of the month. London has recently declined and there has been fresh pressure to sell spelter, particularly futures. Quotations for January and forward deliveries are much lower proportionately than for the next couple of months, which would indicate that producers are well sold in advance and that surplus stocks are likely to be small.

Lead.—The local market for lead remains 6¼-6¾c and the tone is strong. Second hands in New York have recently been offering spot stocks at fractionally higher prices and are now substantially above the Trust price of 4½c. Late advices indicate a rising market in London with improving export business which would be much larger if transportation facilities were available for early shipment.

Copper.—The local quotation for copper of 21½c is firm, although there has been no definite tendency to outside markets recently. New York states that there have been some fair sized orders for export business recently, but that the buying for home consumption has been disappointing. An American opinion is that the market is pretty well pegged around 18c, but that there is not enough buying being done from day to day to absorb the rapidly increasing production. This would indicate the possibility of tne market becoming top heavy in the future.

Antimony.—Figures on antimony are purely nominal. The market for Japanese and Chinese is about 35c, but for English is would be impossible to quote figures as stocks are very short. New York has recently commenced to quote American antimony on the same basis as Chinese and Japanese. American antimony promises to be a feature of that market from this time on, and by the end of the year the production is expected to reach 300 tons a month.

Aluminum.—There is another important advance in aluminum which is now

MONTREAL QUOTATIONS.

Tin	41c-42c
Spelter	19c-20c
Copper	21½c
Lead	6¼c-6¾c
Antimony	35c
Solder, ½ x ½	24c-26c
Solder "strictly"	26c-28c
Aluminum, Ingot	65c lb.
Wire Nails	$2.50 base
Cut Nails	$2.50 base
Pure Manila Rope	16c base
British Manila Rope	13½c base
African Hemp	13½c
Sisal	11¼c
Lath Yarn	10¾c

For quotations on other hardware goods see weekly report and current quotations.

quoted locally at 65c per pound. Aluminum has recently been the leading feature of the metal markets as regards sensational advances, the present prices comparing with a figure of about 20c when the war broke out. New York reports a price of 55c to 57c and states that bidders have stopped running up the price for the reason that it was evidently not improving the situation or increasing the available supply. The present attitude of buyers is to ask for prices rather than to offer them.

Solder.—The downward tendency in solder, which has been felt for the past couple of weeks, has had the effect of reducing the prices by 1c all round. The new quotations are: half-and-half, 24c to 26c, and strictly 26c to 28c.

Iron and Steel.—The important advances in iron and steel announced last week have been absorbed by the market which remains steady. The whole situation reflects the importance of demand for these products as influenced by the war conditions and the requirements for the manufacture of munitions. Further advances would seem to be more probable than declines while the war lasts. The basis for common bar iron is $2.20.

Brass Products.—Important advances of 3c to 5c are noted on brass products, including sheets, rods and tubing. The new quotations are as follows:

Springs, sheets, up to 20 gauge	$0.45
Rods, base ½ to 1 in. round	0.42
Tubing, seamless base	0.42
Tubing, iron pipe size, 1 in. base	0.45

Copper tubing, same as brass.

Copper Products. — Important advances have also been made in copper products. Bars are up 1c; sheets 4c to 5c and braziers 2c. The new prices are as follows:

Bars, ½ to 2 in.	$32.00
Plain sheets, 14 oz., 14 x 28 in., 14 x 60 in.	32.00
Copper sheet, tinned, 14x60, 14 oz.	35.00
Copper sheet, planished, 14 x 60, base	42.00
Braziers' in sheets, 6 x 4 base	32.00

Canada Plates.—While the market has remained comparatively steady on sheets and plates, there have been some differences develop between the Association and some of the independent concerns. The rather surprising thing is that the spread is rather between black and bright sheets than the galvanized. On Canada plates there are two quotations heard, as follows:

	Ind.	Assoc.
Ordinary, 52 sheets	$3.15	$3.25
All bright, 52 sheets	4.75	4.60

Black Sheets.—On black sheets there is a marked difference in the figures of the Association and some of the independents. The following quotations are at the top and bottom of the market but readjustments are likely to be effected shortly:

	Ind.	Assoc.
10 gauge	$3.00	$2.50
12 gauge	3.00	2.55
14 gauge	2.85	2.45
16 gauge	2.85	2.40
18-20 gauge	2.85	2.40
22-24 gauge	2.85	2.50
26 gauge	2.95	2.60
28 gauge	3.00	2.75

Galvanized Sheets.—Prices on galvanized sheets have remained comparatively steady throughout the week and there seems to be little going on in the way of price cutting, the Association figures being practically on a par with the independent dealers. A reduction of 5c on Gorbals Best has been made by way of readjustment.

Sheet Zinc.—The low level struck last week for sheet zinc does not appear to have been warranted by conditions, and this week there is an advance of 2½c recorded. Casks are quoted at 20½c and part casks at 21c.

Lead Pipe.—With the firmer tone in lead it would appear that present quotations for lead pipe and other lead products are likely to be maintained. Prices follow:

Lead pipe	$ 0.09½
Lead waste pipe	0.10½
Sheets, 3-lb. sq. ft.	8.25
Sheets, 3½-lb. sq. ft.	8.00
Sheets, 4 to 6 lbs. sq. ft.	7.75

Cut sheets, ½c per lb. extra.
Cut sheets to size, ¾c per lb. extra.

Mechanics' Tools.—The demand for mechanics' tools for use in the manufacture of munitions continues. There is also a strong call for files and drills and of some sizes of the latter it is becoming difficult to secure delivery.

Arms and Ammunition.—The weather recently has not been favorable for hunting, and for this reason it is noted that the demand for ammunition, while still satisfactory, is not so active as might be expected. The call for guns also seems to have been somewhat affected.

Boiler Plates and Tubes.—Some readjustments are being made in the prices of boiler tubes and plates to cover slight advances all round. The rising markets for raw materials is the direct cause of the increase made.

Fencing.—Already some orders are being placed for spring deliveries of fencing and some interest is also being displayed in poultry netting. The prices of both are considerably higher than normal and this may interfere with the demand.

Cotton Rope. — The advance in the price of cotton rope referred to last week has been confirmed by leading jobbers. Sizes up to 3-16 are now on a base of 24c and larger on a basis of 23c. This has affected the quotations on sash cord, which are confirmed as follows: No. 6, 28½c; No. 7, 27½c, and No. 8 to 12, 27c.

Hay Baling Wire.—Most jobbers have adopted the new quotations on wire, smooth taking a base of $2.60, while hay baling is quoted as follows: No. 13, $2.65; No. 14, $2.70, and No. 15, $2.80. These prices are as previously announced.

Seasonable Lines.—Although the warm weather has interfered with the movement of some of the fall lines, and has reduced the re-orders on ammunition, there is still a good business being done in seasonable goods and the next cold spell should see a big call for winter lines of the more staple variety. Flashlights are meeting with a demand that promises to bring them into the classification of staples rather than novelties.

Stoves.—The warmer weather has interfered considerably with the demand for stoves which was so active a week or ten days ago. However, it is believed that when the cold weather commences in earnest there will be a rush for heaters as the attitude of the public, as reflected by the dealers, is to put off purchasing as long as possible.

TORONTO

TORONTO, Oct. 14.—Hardware jobbers report a steady improvement in business. Present indications are that October will prove to be one of the best months of the year. The recent warm weather has slackened the demand for winter lines. Country trade is very good. The markets are steadier this week than they have been for some time past. Price cutting is much in evidence on some lines. In the paint and glass trade there is a fair demand for fall lines, although retailers are only buying paints for immediate needs. A decline in the price of ready-mixed paint is anticipated.

General trade conditions continue

TORONTO QUOTATIONS.

Tin	37-38c
Copper	19½c-20c
Spelter	16½c-17½c
Lead	6-6¼c
Antimony	35c

Easy	20½c
Star Extra	23c
Strictly standard wiping	23½c

to gradually improve and indications point to further increases in the export trade of the Dominion. This is an encouraging feature as the favorable trade balance which has resulted will benefit the country considerably and put business generally on a more stable basis. The development of the export business is of course due to the large orders for war equipment, and there is every reason to believe that there will be a steady stream of these orders for some time to come. The result of the war business will mean general increased prosperity and an improvement in economic conditions.

As regards domestic trade, business is quieter, and, owing to prevailing conditions, few new enterprises are being started except for the manufacture of munitions. In this regard developments are expected in the near future, as it is understood that tentative inquiries are being considered for the manufacture of 60 pdr. and 180 pdr. shells. The making of artillery is being considered, but nothing has developed in this regard up to the present. That developments in the shell industry are promised is indicated by the announcement that two experts from England will assist the Shell Committee as technical advisers.

Steel Market

The probability of 60 and 180 pdr. shells being made in Canada will further stimulate the steel trade. The demand for steel for munitions is steadily increasing and the mills are working to capacity. The market for bars is very firm and an advance may be expected any time. Owing to the increased cost of raw material, prices of cold drawn steel shafting have advanced, the discount off list being 5 per cent. lower. Steel boiler tubes have advanced, the new quotations ranging from $1 to $2 higher per 100 feet, according to size. Wire rods are higher, being quoted at $31 Pittsburg.

Galvanized sheets continue irregular, the tendency being towards lower prices, although it is hardly probable that the low levels will be maintained. The shortage of semi-finished steel is a problem that galvanized sheet manufacturers will have to face, and although spelter is lower than it was some time ago, the price is still too high to be attractive to consumers.

There is an extraordinary demand for nearly all kinds of steel products in the States. Some of the larger mills are reported to be turning down nearly as much business as they are accepting, being unable to make the deliveries wanted. A tremendous demand for steel bars for shells continues and inquiries aggregate an enormous tonnage, the market being practically sold out for this year. Prices are advancing and bars, plates and shapes are now quoted at $1.40 Pittsburg.

Pig Iron

The market for foundry iron is still very quiet, but the demand for steel making pig iron is increasing. The market for standard low phosphorous iron is buoyant and there is an increased demand for this grade in Canada; a considerable tonnage being imported from the States. Quotations are firm, but unchanged.

Old Material

The market is weaker for copper and brass, and prices are slightly lower. Heavy melting steel and wrought iron are stronger on good demand and prices have advanced 50c per ton, lead and zinc are quiet and prices unchanged. Prices are given in the current quotations.

Machine Tools

The probability of orders being placed for larger shells has stimulated the market. Tentative enquiries are being sent out for larger lathes than have hitherto been used. The shells are of the high explosive type and range from 6 in. diameter upwards. Lathes of 24 in and 30 in. swing will probably be required for the work. Large orders for this equipment have already been placed with builders in the States by British, French and Italian agents. It is therefore possible that some difficulty will be experienced now in obtaining a sufficient number of heavy lathes for immediate delivery. There is still a good demand for second-hand equipment and increased activity is anticipated for lathes of this class.

Metals

The market generally is steady and there is nothing of particular interest to report. There are no price changes to note this week, the markets being dull and featureless. The demand for metals for munitions continues brisk, but ordinary business is comparatively quiet.

Tin—Both London and New York markets are dull and unchanged. There is very little business doing, both buyers and sellers awaiting developments as there is a possibility of an export duty being levied on tin by the British Government. Quotations are unchanged at 37c to 38c per pound.

Copper—The market is quiet and unchanged, but in good condition. Producers generally are satisfied with the situation, and while the demand is dull at present, increased activity is expected in due course. Quotations are firm and unchanged at 19½c per pound.

Spelter—The market is dull and easy, with a lower tendency. The demand is light and consumers are not showing much interest. Quotations are unchanged at 16½c to 17c per pound.

Lead—The market is very steady, there being no change of any sort. This metal continues in good demand. There is an impression in the trade that no official change in price is likely in the near future. Lead is quoted locally at 6c to 6¼c per pound.

Antimony—The situation is unchanged and market dull. Quotations are nominal at 35c per pound.

Aluminum—There is nothing of particular importance to note in this market. Supplies are still very scarce and quotations nominal at 55c to 60c per pound.

Lead (Sheet).—Adjustments in the price of sheet lead have been made, with the intention of maintaining prices at the following figures:

	Per 100 lbs.
Sheets, 3-lb. sq. ft	$9.00
Sheets, 3½-lb. sq. ft.	8.75
Sheets, 4 to 6 lb. sq. ft.	8.75

Cut sheets ½c per lb. extra.
Cut sheets to size, 1c per lb. extra.

Lead Pipe.—The price of lead pipe holds firm. Fall plumbing has caused a slight improvement in the demand, the following figures ruling:

	Per 100 lbs.
Lead pipe	$9.50
Lead waste pipe	10.50

Traps and bends, 25 per cent. off list.

Galvanized Products.—The unsettled condition of the market for galvanized goods, especially in sheets, is still in evidence, although not quite as much as during the past two or three weeks. Price cutting still rules. There is a disposition on the part of local jobbers to sell at uniform prices, but this has not been possible owing to the fact that very low prices have been quoted in some quarters and a number of firms have met the low prices.

Rope.—There has been a fairly good demand for rope of various kinds. The volume of business coming in from the country places is also good, and a fairly satisfactory condition exists in the rope trade. Prices are being maintained at the following figures:

	Per lb. basis
Pure Manila	16c
British Manila	13½c
African Hemp	13½c
Sisal	11½c

Wire Rods.—There is a possibility that the price of wire rods will shortly advance. At the time of going to press nothing definite can be ascertained, but it is altogether likely that an advance will take place. Should this occur a further general advance on all lines of wire goods will doubtless be a result.

Stoves.—Although the weather has been unseasonably warm, the demand for stoves and heaters has been very good. With the advent of cooler weather manufacturers expect that the stove business

will benefit considerably. A local manufacturer stated that the sales so far this season are above those that were anticipated earlier in the season. A movement of furnaces to country districts is in evidence, which indicates that the farmers and country residents are making modern improvements. Considerable interest is being shown in oil heaters also.

Ladders.—At the time of going to press last week full details had not been obtained in regard to a decline in the price of extension ladders, but it was stated that a decline of 1c per foot was reported. This decline has gone into effect and revised prices are shown in the current quotations. Roped extension ladders is the only line affected in this change.

Spades and Shovels.—Local jobbers are receiving a large number of orders for spring delivery, of spades and shovels. The prices are unchanged from those of last year. Local quotations are as follows:

1sts .....60 per cent. discount
2nds ..... 55, 2½ per cent. discount
4ths ..... :45 per cent. discount

Fence Wire.—There is a fair movement of fence wire locally. Although fairly high prices are ruling at the present time, farmers continue to improve their farms with modern fences. The following prices are at present ruling on the local markets:

	Per 100 lbs.
Barb	$3.00
No. 9 coil spring	3.00
No. 9 plain galv.	2.85
No. 12 plain galv.	3.00
No. 13 plain galv.	3.15
O and A, No. 10	2.61
O and A, No. 11	2.61
O and A, No. 12	2.75

Seasonable Lines — With the warmer weather there has been less interest displayed in the regular winter lines such as ash sifters, coal hods, snow shovels, horse-blankets, etc. Winter preparedness is manifested by the amount of weather strip that is being sold. An exceptionally good demand is reported.

Arms and Ammunition.—In spite of the recent advances that manufacturers of arms have made in the price of their products, the demand for shot guns and rifles continues to improve. Ammunition is moving fairly well, the bulk of the business being done in shot shells. Sporting rifle metallics have shown a slight improvement, but this will increase as the season for big game approaches.

Waste.—The demand for waste is good, and fairly heavy shipments have been made during the week to factories that are busy, working on ammunition and other supplies for the Allies.

LONDON

LONDON, Ont., Oct. 14.—Local jobbers are finding business very good, especially with the country trade. City trade has also been very good during the week. October business so far has been splendid, and there is a steady demand for all staple fall lines.

Linseed Oil, as predicted last week, has been advanced 2c per gallon. Locally quotations are as follows:

	Raw.	Boiled.
1 to 2 barrels	74c	77c
3 to 5 barrels	73c	76c
6 to 9 barrels	71c	74c

Turpentine remains unchanged, and is quoted in single barrels at 64c per Imperial gallon. Two to four-barrel lots are quoted at 63c per gallon; 5-gal. lots at 71c per gallon.

White Lead is firm at the recent reduced price. Pure lead is quoted at $9.60 in ton lots and $9.90 in less than ton lots.

Advance in Rope.—Cotton rope has advanced, as predicted, and is now quoted as follows:—¼-in. and larger, 23c per pound; 3/16-inch, 24c per pound.

Rope.—The demand for rope is good, and prices are firm at the following figures:

Pure Manila	16c	lb. basis
British Manila	13½c	„ „
African hemp	13½c	„ „
Sisal	11½c	„ „

Sash Cord.—Sash cord has also advanced in price, the increase being 1½c per lb. Quotations are as follows:

No. 6	28½c lb.
No. 7	27½c lb.
Nos. 8-9-10-12	27c lb.

Fence Wire.—Good demand locally is reported for all kinds of fence wire. Prices are very firm at the following figures:

	Per 100 lbs.
Barb	$3.20
No. 9 galvanized	2.80
No. 12 galvanized	2.95
No. 13 galvanized	3.05
No. 9 coil spring	2.85
No. 10 O and A	2.76
No. 11 O and A	2.82
No. 12 O and A	2.90

Glass.—A fair sorting business is being transacted with local jobbers. The prices remain unchanged, and are quoted at the following discounts:

Single diamond	20% off list.
Double	20% „ „
Cut lights	20% „ „

Shoe Thread.—With the general price advance in all lines of cotton goods, it is expected that a change will in all probability result in the price of shoe thread, etc. Present prices on the London markets are as follows:

No. 8 Star	$1.04 lb.
No. 10 „	1.12 „
No. 15 „	1.16 „
No. 8 Barbour	1.19 lb.
No. 10 „	1.27 „
No. 12 „	1.30 „
No. 15 „	1.37 „
No. 20 „	1.42 „

Lanterns and Globes.—A call for lanterns and globes is general from the country districts, and large shipments are being made from this point weekly. The following prices rule:

Lanterns—

Cold blast	$7.25 doz.
Short pattern	7.25 „

Globes—

Cold blast	50c doz.
Short pattern	65c „

Seasonable Lines.—The movement of seasonable lines continues to improve, and a good demand is also noticed for such lines as weather strip, ash sifters, horse blankets, carriage heaters, etc.

WINNIPEG

WINNIPEG, Oct. 14.—Business during the first two weeks of the month has been very good and now that the weather has setttled favorably jobbers may reasonably expect a big volume of trade for the month. All the jobbers are looking after their accounts carefully and making it plain to the retailer that he must take care of his indebtedness this fall, and it is expected that collections will be very good.

The recent advances in iron and steel with more likely to follow, will affect most manufactured lines of goods, plated butts, bolts, screws and wrought pipe are almost sure to be affected and no contracts are being closed in these items for future delivery.

Many prices for spring delivery have already been made and it is certain that

lower prices will not be quoted and higher may prevail before the first of the year. That many are taking advantage of to-day's prices on these lines is evident for booking orders have been coming in quite freely.

Lines now being booked are screen doors, screen windows, screen wire cloth, formaldehyde, woven fence, poultry netting and .22 metallic ammunition.

There are few changes to record this week, the most important one being an advance in hexagon poultry netting, which is now quoted at 42½ per cent. from list.

Stove pipe wire, 18 and 19 gauge, is now selling at 5½c per pound.

Three or four days ago the writer read a letter sent from a Saskatchewan town, which stated that the merchants were complaining about farmers who now had money, sending it in to the mail order houses in Winnipeg and leaving accounts which had been running a year or two years with said merchants unpaid.

This is a state of affairs which exists more or less generally throughout the West and it strikes one rather peculiarly that any merchant will allow this condition to get the upper hand. A man's first duty when owing an account is to turn the proceeds, or part at least, of his crop over to the merchant to settle the account. It is deplorable and often true that this is not done and the farmer forgets that if it had not been for the merchant's asistance in supplying goods he would have had no crop whatever. The retailers are the ones who should point this out to the farmers.

$25 OFFERED FOR AN IDEA

The Regina Trading Co., Regina, Sask., recently offered $25 in cash to the person presenting the best suggestion to advertise their store. The company made the following announcement:

The Regina Trading Company offer to the person or persons submitting the best advertising plan twenty-five ($25) in cash. This is YOUR opportunity.

In your spare moments think out some feasible advertising plant that will INCREASE LEGITIMATE BUSINESS and SATISFY PATRONS.

This offer is open to everyone; absolutely no restrictions whatever.

Ladies, business men, professional men, working men, clerks, students, church societies or clubs can compete.

Our reason is to get a novel method of advertising and at the same time an effective and profitable way.

We are willing to pay for your brains.

Think out some plan, the more original the better, and submit it in writing and duly signed to The Regina Trading Co., and the person or persons submitting any new plan or plans that are accepted by the mangement of the compny to be used as an advertising policy will receive $25 in cash.

SHEET METAL WORKERS' COURSE

(Continued from page 37.)

side. Where these measurements intersect the horizontal lines, draw curved lines as shown which will complete the oblong piece.

Follow out the same instructions when developing pattern for large end. The only difference being that each section is equal of which there are only eight in the large round end, whereas in the case of the oblong piece there are twelve sections, viz., eight to complete each semi-circle of the oblong and four to form the flat portion.

The next step will now be the developing of the pattern for the centre piece in Fig. 1, as shown at x, a, b, c, d, e, x, and 1, 2, 3, 4, 5, and erect a number of triangular lines by connecting e to 4, 4 to d, d to 3, 3 to c, c to 2, 2 to b, and b to 1.

Now turn to Fig. 4. Erect a vertical line as shown at x 5 and transfer the triangular measurements as shown by opening up compass placing point at 5 in Fig. 1 to point x e, this indicates that the same measurement must be repeated to form the oblong portion on pattern. Next transfer measurements in turn from e, 4, Fig. 1 to e, 4, Fig. 3, intersecting the letters a, b, c, d, e, by the corresponding measurements in the semi-circles on the plans as well as intersecting the figures 1, 2, 3, 4, 5. It will be noted that each triangle with its respective letters and figures is the same measurement as in Fig. 1.

In all three patterns there must be an allowance for seams or laps.

As this course is now drawing to a close and will be concluded with article 50, we would very much like our readers to send in at an early date any pattern which they would like to be developed.

(Continued in next issue.)

NO. 615 SPRING HINGE

(Continued from page 42.)

thick. In the accompanying illustration the side plate has been removed to show adjustment. The makers state that the tension of this hinge is strongest at the closing paint, and decreases as the door opens. The weight of the door rests on hardened ball-bearings, which are located on top of hinge, being protected from water and dirt. The makers state that the hinges may be easily applied and adjusted by anyone. Adjustment has been provided for aligning the door. The hinge is made in a number of finishes and special finishes will be made to order. Further details may be secured from the manufacturer.

ATTRACTIVE STORES IN WESTERN TOWN

(Continued from page 33.)

Owing to the forty-foot width of the store there is an abundance of space available for display purposes without resorting to overcrowding in any way.

A sample automobile is also displayed on an elevated stand in the store, the firm having the agency for Overland automobiles.

A number of very handy display racks are used for displaying bulky and heavy goods.

Pulley blocks, etc., are attractively displayed on a rack constructed of iron pipe, and located near the rear of the store. Wood handles of various kinds are prominently displayed in a specially constructed rack, located near the rear and shown in the accompanying illustration.

Other lines shown on display racks are axes, whips and halters. The store during the daytime is very bright, and at night is illuminated by electrical drop lights. The store is a brick building plastered on the inside.

Gordon & Dubuc like many other small town hardwaremen who have up-to-date stores, know that the small town residents and the farmers appreciate having modern and well equipped stores in their midst. Modern stores with well displayed and well selected stocks are one of the most effective weapons to use in fighting the competition of mail order houses and department stores.

AS THE LEAVES FALL

October to me, is the best month of the dozen. Here we find exact estimates of things, not glorious promises of an unfulfilled future. What there is, there is. It is all under our immediate appraisal, and that too, set in a radiance of red and gold equal to any of Nature's color schemes.

The mature lambs, the sleek calves, the promising colts make the old farmstead cheery with their real worth at this time of stock-taking. The grain crops are safe inside the granary. The corn has matured and is settling down to the mellow sugar of welcomed ensilage. The apples, peaches and pears, fully ripe are summing up their final invoices and we know where we are.

And above all the Empire of our freedom is still virile, our hopes for individual growth undimmed, and the God of peoples is still our God.—Grasmere.

WEEKLY PAINT DEPARTMENT

Effects of War on Oil and Turpentine

Interesting Information Presented at Big Convention of National Paint, Oil and Varnish Association.

AT the twenty-eighth annual convention of the National Paint Oil and Varnish Association, held recently at Cleveland, Ohio, some phases of the paint situation, of particular interest to the Canadian trade, were discussed.

The report of the linseed oil committee gave some interesting information regarding the flax crop, and stated in part as follows:—

The government estimate of acreage this year is 1,881,000 acres. In 1914 it was 1,927,000 The Canadian Government estimate is 1,009,600 acres, compared with 1,163,000 in 1914. Condition of the U.S. crop August 1, 92.5 per cent.; last year 82.1 per cent.

Well-posted grain men state that both our government and that of Canada are too high on their estimates of acreage, but all are agreed that conditions of the growing crop were never better for this season of the year.

The receipts of seed at Minneapolis and Duluth have been small from the crop of 1914; amounting to 12,817,000 bushels, and at Winnipeg 3,728,000 bushels, the latter only 28 per cent. of the receipts of a year ago. August, 1914, the stocks in public store at the northwestern ports were 5,040,000 bushels. This year 2,681,000 bushels.

The receipts in this country from the Argentine have been 9,242,000 bushels. This, added to receipts from the small crops of the United States and Canada, have given us ample supplies.

The last year has been one of unusual condition and violent fluctuations, brought about largely by the European war.

Last fall the impression prevailed that a fair-sized Argentine crop of flaxseed would be dumped in this country. As a result the price of flaxseed in our northwestern markets went to a low level, selling below $1.40 per bushel during the time of the largest movement of the crop. Early in 1915 it was found that Europe was taking seed in large quantities. In consequence our market went to a high level and remained there for several months. Holland consumed unheard-of quantities for that small country, but in June the British Government put an embargo on Holland shipping linseed oil and oil-cake to Germany. As a result of this order the market for South American seed weakened, and our market in the northwest followed the foreign weakness. We then had a slump in prices of 30 to 40 cents per bushel.

The history of this last year is interesting because with a short crop in the United States and Canada, a reduced acreage and yield in South America, we have had a price on flaxseed as high as $2.14 per bushel and low as $1.27¾, showing that supplies have cut no great figure only as they were affected by war conditions in Europe.

We did not raise enough flaxseed in North America last year to justify low prices, nor with reduced acreage here is there anything to point to very low prices during the coming year unless European consumption continues to decrease rapidly. In that event Argentine may ship enough seed here out of the coming crop to reduce our prices below the present level.

Barring war conditions the present stocks and world crop conditions do not point to any great surplus of supplies during the coming year. It is surprising how much oil the United States is consuming.

We figure the supply of seed for the last year has been as follows:

Receipts at Minneapolis and Duluth	12,817,000 bus.
Receipts in Canada.....	3,728,000 bus.
Receipts in U.S. outside Minneapolis and Duluth	1,500,000 bus.
Receipts from Argentine	9,242,000 bus.
Reduction in stock in public store in Canada and U.S. during year..	2,359,000 bus.
Total	29,646,000 bus.

There has been some duplication of receipts and a small amount consumed in Canada, but these two items will probably not exceed a million and a half. This would leave 28,000,000 bushels as the amount available for consumption this last year. Early last fall the estimates of consumption for the United States were as low as 20,000,000 bushels, but the figures given above indicate that our consumption of linseed oil has been above normal or shows a small increase. These figures must be a great satisfaction to the paint, oil and varnish men of the United States, showing as they do that while the old world has been rent by war and industries of all kinds are demoralized and destroyed, our business has a healthy and normal growth.

The report of the Naval Stores Committee gave some interesting details regarding the turpentine situation. The report read in part as follows:

During the greater part of the year the chaotic conditions reported by the previous Naval Stores Committee, continued resulting in the formation of the Turpentine Farmers' Association, the membership of which was composed of a large percentage of the producers who were dissatisfied with the prices being offered for naval stores and retired their holdings from the market. A nominal market ruled from July 29, 1914, to November 16, 1914, when a trading basis was re-established on the Savannah Board of Trade which has continued uninterruptedly since that date.

Naval Stores as a Contraband.—Shortly after the declaration of war in Europe, the Allies declared naval stores to be contraband and, having exhausted every possible means in this country to have this restriction to the free movement of naval stores removed, the exporters sent a representative to London to present their appeal to the British Government, which, however, was not granted. It is stated that the failure of this mission was due to the apprehension upon the part of the British Government as to the possible value of naval stores in the manufacture of explosives. This has resulted in a complete cessation of exports to foreign countries other than controlled by the Allies.

As the Canadian trade is now dependent upon the United States for supplies of glass the report of the Window and Plate Glass Committee should prove interesting to the Canadian trade. The report states as follows:—

EFFECTS OF WAR ON OIL AND TURPENTINE

(Continued from Page 48)

During the past year your jobbing conditions in window glass have not been satisfactory. Owing to unsettled financial conditions, due largely to the war raging in Europe, domestic consumption was approximately 20 per cent. below normal, and the manufacturers were forced to recognize this state of affairs by a decrease in production. Instead of operating the old type of window glass factories, in which glass is blown by lung power, seven months as was called for by the wage scale, those plants were operated for a period of six months during the year. Curtailment in production was also practised throughout the year at nearly all of the plants in which window glass is produced by machines, and it is estimated that but little more than half of the possible output was produced at the machine-operated factories. Some relief from the decrease in domestic consumption has been found in the export of glass to various other countries; but because of the exorbitant freight rates and lack of steamship space, this outlet has not developed as we thought would be the case when exports from Belgium and France were suspended last fall.

After selling large quantities of window glass, both for current requirements and future delivery, at prices in effect from the beginning of the blast, November 2, 1914, the manufacturers advanced prices the latter part of January of this year, and there has been no official change in prices since that time, other than on some of the specialties, selected quality for picture-framing and heavy glass, commonly termed "Crystal Sheet."

Not a great many years ago there was but one company in this country which manufactured window glass exclusively by machines. That company operated six factories. During the past year there were fifteen additional factories in which window glass was made only by the machine process, and nearly all of these plants were formerly in the ranks of the hand-operated factories. For some time after the introduction of window glass produced by the machine process there was a prejudice against the product because of the lines which appeared in the sheets, and which distorted and otherwise affected the vision; but with the introduction of later methods in connection with drawing glass by machines this difficulty has been overcome, and the product is recognized as being superior to hand-made glass.

Stocks held by manufacturers and jobbers are light, and there is no prospect that a general resumption will take place at the factories until November. In the meantime, the jobbers should be securing higher prices for their glass than those which have been current in many sections of the country for the past seven months. With the demand considerably below normal, no one can expect his volume of business to equal that of normal times. The expense of carrying on a business increases as the volume of business decreases. That situation can be satisfactorily met in but one way; secure a larger profit on what glass is sold rather than attempting to increase the volume of business which will be done largely at the expense of profit.

The plate glass market during most of the past year has been in a very unsatisfactory condition, and for the past few months demoralization has been extreme and prices are lowest the industry has ever known. This applies to both the manufacturer and distributor, and glass has been sold without any apparent relation to cost and profit. The above is primarily due to general business conditions, which have resulted in a decreased demand, and this in turn has brought about an over-production, notwithstanding the fact that six factories have been shut down for almost a year, and important curtailments have been made by other factories.

The importations during the first half of 1914 were quite heavy, due to the reduction in the tariff, and this had a depressing effect on the industry, but when the war broke out importations were cut off, and for the first time an opportunity presented itself to the American manufacturers for an export trade. For a time this gave stability to the market, but the export demand has proven disappointing, and the reduction in domestic consumption more than offset the elimination of imports.

The consumption of plate glass depends in the main upon the building, mirror and automobile trades, and the first mentioned has been considerably below normal, the mirror trade, the poorest in its history, while the automobile trade alone has been above normal. It is not thought prices will go lower but on the contrary, no radical advance is likely, yet with the improvement in general business and an increased demand incident to the season it is reasonable to expect some reaction from the present low level of values.

PAINT MARKET

(Continued from page 52.)

export demand is said to be the cause of this last advance. This increase now makes quotations on the local markets at the following figures:

	Per Imp. gal.
Single bbls.	65c
2 to 4 bbls.	64c
5-gal. lots	72c

White Lead.—Local jobbers and manufacturers state that the sale of white lead has increased considerably since the recent reductions in price have been in effect. The general opinion of the trade is that the present price will hold firm for some time. Pure lead is quoted locally at $9.60 per 100 lbs. in ton lots and $9.90 per 100 lbs. in less than ton lots.

Glass.—Fall business continues fairly active with glass jobbers, and is pronounced by them to be very satisfactory. The volume of business is not as great as that of a year ago, but is above the expectations of the majority of the jobbers. Country dealers are taking very fair shipments from the local jobbers, chiefly in cut lights of the small, standard sizes. Rumors were afloat to-day of a probable advance in the near future, but inquiries from those who are recognized as authorities in the glass trade failed to confirm the rumors. Prices continue firm, both on the local and the U. S. markets.

Putty.—Putty has shown a slight improvement since the fall movement of glass has begun. Prices are being well maintained and no immediate change is anticipated. The following prices rule on the local markets:

	Per 100 lbs.
Bulk in casks	$2.50
Bulk in drums	2.70
Bulk, in 25-lb. drums	2.80
Bladders in barrels	3.10

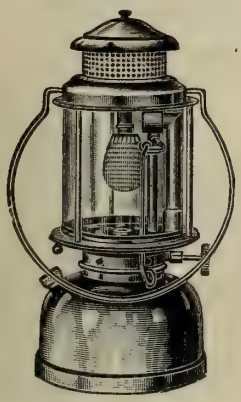
Gasoline.—An increasing demand for gasoline is noticeable, both locally and on the U. S. markets. A shortage, it is said, still exists on the American markets, thus maintaining firm prices. It is predicted that further advances in the price of gasoline will shortly go into effect. The present prices ruling on the Toronto markets are as follows:

Barrels	21c per gal.
Drums	19c per gal.
Tank wagon	18½c per gal.

LARGE SHELL CONTRACT

The recent inquiry for 36,000 to 40,000 tons of round steel bars for the manufacture of high-explosive shells for delivery over the whole of 1916, at the rate of about 3,000 tons a month, revealed the fact that a large contract for three and six-inch shells, to be made to the French specifications, had been placed late on Thursday. The understanding is that these shells were placed through Canadian interests who put out inquiries several weeks ago. J. P. Morgan & Co., yesterday, by letter, asked for bids on 150,000 "6" shells. The specifications call for 155 millimeters; that is, the shells are for export to France. The life of the prospective contract is to be three to six months.—American Metal Market.

THE STORM KING LANTERN



Wind and Rain Proof — 200 Candle Power, ¼ cent per hour. Operates 15 hours on one filling of gasoline or kerosene. The highest powered, most economical, and safest lantern ever made, for farmers, dairymen, contractors, sportsmen, watchmen, and for shows, boats, railroad yards, military encampments, and way stations. Automatically cleaned, cannot clog. No wicks to trim, no chimneys to wash, no smoke, no smell, no dirt. A quick and profitable seller for dealers and agents. If you want one for your own use, ask your nearest hardware dealer to send for one on trial.

If you want the agency write for our Special Lantern Proposition.

WEEKLY PAINT MARKETS

MONTREAL

MONTREAL, Oct. 14.—The paint trade is awaiting developments. Interest of both retailers and manufacturers centres on the future situation, which should be cleared up about the 25th of the month by an announcement as to prices for late fall and spring business. That there will be some reduction is generally taken for granted, and this will be favored by the manufacturers as well as the dealers. However, as to the extent of the cut—or whether there will be a reduction at all, in fact—depends to a large extent upon the zinc market. It is expected that the producers will make their announcement to the trade within a week. Zinc at present is an unknown quantity, so far as the paint trade is concerned, and until there is some indication of future quotations the cost of mixed paints cannot be estimated. Lower prices for zinc are hoped for, because at the present level the recent reductions in lead are offset to a large extent, while at the same time there have been advances in linseed oil and turpentine is somewhat firmer.

Until the air is cleared it is evident that many retailers are marking time as regards deferred purchases, and are only placing for immediate delivery to the extent of immediate business. For this reason there is a dragging tendency, although conditions show an improvement over a year ago. Manufacturers as well as retailers are, therefore, anxious to establish an assured working basis. With definite prices the outlook is favorable for active buying, as stocks have been allowed to run very low with the indications that the present abnormally high prices were not likely to last.

Prices have recently been steady in practically all departments. Lead is steady and firm. Linseed oil continues firm also, with a slightly wider range; and turpentine still promises to move up from the bottom of the wide range. Some of the more bulky goods are moving fairly well with the close of navigation approaching.

Linseed Oil.—There has been little change in the linseed oil situation. A quotation is heard 1c below the bottom of the range, as given a week ago, but this cannot be taken as a definite indication of weakness, and the general tone is rather to the contrary. The following quotations cover the full spread:

	Raw.	Boiled.
1 to 2 barrels	67-70c	70-73c
3 to 5 barrels	66-69c	69-72c
6 to 9 barrels	65-68c	68-71c

White Lead.—Since the reductions in the price of lead there has been a much better movement. The present basis is $9.45, with 30c added for less than ton lots.

Zinc.—The position of zinc continues as the most interesting feature of the paint market, and the announcement of the refiners as to prices for future supplies will be the predominating factor in deciding prices on mixed lines. The producers are expected to make their prices known to the manufacturers during the coming week, and about the 25th of the month the latter will make their announcement to the trade. Lower prices are hoped for on zinc futures, and the extent of the decline will largely decide the action taken with regard to paints.

Turpentine.—The firmer influence in the turpentine market appears to continue, but the situation is absolutely unchanged from a week ago. The low quotation of 58c is still heard against the high of 62 and the advance of the former to 60c is still under consideration by those houses which have been at the bottom of the range. Reports indicate that the outside influences favor such an advance in the very near future.

Gasoline and Oil.—Gasoline is steady at the advances noted last week, and there is a sustained demand, the fine open weather having had the effect of encouraging the late use of motor cars. The price by tank wagon is 18c and 18½c for drums. Benzine is 17½c in drums and 17 tank wagon. With the shorter days and with the call for heavy commodities prior to the close of navigation there has been a satisfactory movement of coal oil. The prices are 13c and 15½c in single barrels, these quotations having prevailed for some time.

Glass, Putty, etc.—There is a fair movement of window glass and putty continuing, although the seasonable demand is below the normal owing to the light building programme; plate glass is moving slowly. Prices are steady and unchanged. There is little that can be said about dry colors further than to repeat that conditions are very much unsettled and prices are being adjusted to higher levels from time to time on certain lines, while on a number of others quotations have been withdrawn.

TORONTO

TORONTO, Ont., Oct. 14.—There appears to be a better feeling ex- in nearly all branches of the paint trade. The sale of prepared paints is not quite as good as manufacturers and jobbers would like to see it. This can be accounted for to some extent by the fairly high prices that are being quoted for ready-mixed paints, and the hand-to-mouth policy being followed by retailers. Since the reductions in the price of white lead which have taken place during the past few weeks, the opinion has been expressed quite freely that the price of prepared paints is due for a decline. Stocks of prepared paints are very low, especially in the country places. There is an improvement in the volume of business in white lead. Linseed oil has been steady and no further changes are reported from last week. Turpentine is about the only product affected this week, an advance in price of 1c per gallon having gone into effect.

Linseed Oil.—There is no change in the price of linseed oil locally and the prices as quoted last week of 74c per gal. for boiled and 77c per gal. for raw are holding firm. The quotations of the different jobbers are more uniform than they have been for some time, the price cutting being practically eliminated. The condition of the linseed oil market is to say the least, very peculiar. Jobbers state that if the same conditions had existed when business was normal, the result would be dollar oil. As it is now, the jobbers state that it is useless to further advance the price of oil as it will not sell even at the present price, owing to the small demand. It is estimated that only eight per cent. of the flax seed crop in Western Canada has been threshed, and that the percentage of seed crushed to date is only about two per cent. of the amount crushed at this time a year ago. The following prices are ruling on the Toronto markets:

	Per Gallon	
	Raw	Boiled
1 to 2 barrels	74c	77c
3 to 5 barrels	73c	76c
6 to 9 barrels	71c	74c

Turpentine.—An advance of 1c per gallon in the price of turpentine has gone into effect during the past week. This is not due to the local market conditions, but to the fact that the price has advanced on the Savannah markets. A falling off of supplies and an increased

HARRIS HEAVY PRESSURE, the Babbitt Metal Without a Fault.

THE CANADA METAL COMPANY, LIMITED

TORONTO MONTREAL WINNIPEG

Moore's House Colors

Will increase your paint sales because they sell at a reasonable price and give a satisfaction second to none.

A PURE Linseed Oil Paint

No spurious oils, benzine, water, alkali, or other worthless materials enter into their composition.

They combine the very best and most durable pigments, thoroughly combined with pure, old-fashioned, well-settled linseed oil and the best dryer.

They have been used in every section of the country and for all classes of painting, and have never failed to satisfy the demands of the most exacting customers—**try them and see for yourself.**

Write for our proposition now, lest you forget by putting it off.

More Varnish Profits For You

JUST as Young Brothers Decorating Co., Wichita, Kans. are now selling $3,000 worth of Pratt & Lambert Varnishes a year from a $100 start, or as Vining & Borrner, Springfield, Mass., from one case buyers eight years ago now buy hundreds of gallons yearly and expect soon to be carload buyers, so you too can start small with Pratt & Lambert Varnishes and grow big.

The one case assortment of Pratt & Lambert Varnishes and effective advertising matter that goes with it, illustrated above, gives you the chance. It will prove that you can make more varnish profits by handling Pratt & Lambert Varnishes because back of the Pratt & Lambert Varnishes on your shelves will be the same selling forces that have been largely responsible for the successes of these and of other Pratt & Lambert dealers everywhere.

Don't be content to guess that you are now selling the most profitable line of varnishes. Find out! When a line of varnish shows the steady sales growth that Pratt & Lambert Varnishes do — more than three times sales increase on "61" Floor Varnish since 1908 and an almost equal sales increase on Vitralite since 1911, with other Pratt & Lambert Varnishes showing big increases, isn't it worth while to *send for prices on the one case assortment* and prove that you can greatly increase your varnish sales?

THREE • • •

REASONS

ELEPHANT LIQUID PAINT has been sold for nearly fifty years—that is proof of its quality.

ELEPHANT LIQUID PAINT retails at a price that attracts the careful paint buyer—most paint buyers want the best value they can get for their money.

ELEPHANT LIQUID PAINT dealers are liberally supplied with complete and attractive advertising—color cards and store features that will sell paint.

RESULTS

MORE paint sales for you—while high-priced paints lie on your competitors' shelves.

MORE profits and customers for you—the life of every business.

MORE prospects of building up a large, successful paint business—the longer you sell ELEPHANT PAINT the better it pays.

Write for prices and full particulars of the Elephant proposition.

You May Become a Practical Window Dresser for $2.60

This is the first book ever written devoted exclusively to Hardware Window Display, and is a really new and good book. It is a practical, up-to-date collection of ideas of the most expert window dressers in the world. There are hundreds of displays in the book that can be put in at practically no expense — any one of them will bring enough extra trade to the store to pay for the book many times.

The "PERFECTION" Steel Ankle Support

PAYS A GOOD PROFIT AND WILL INCREASE YOUR SKATE SALES

Weak ankles keep many a person from enjoying the splendid winter pastime of skating.

Stock and boost the "Perfection" Ankle Support — it is just the thing for weak ankles.

The sale of the "Perfection" will lead to many others and you'll realize a material increase in your skate sales as a result, because people who heretofore couldn't skate on account of their weak ankles can get in on this splendid winter sport by wearing this ankle support —the more that skate the more is the demand for skates.

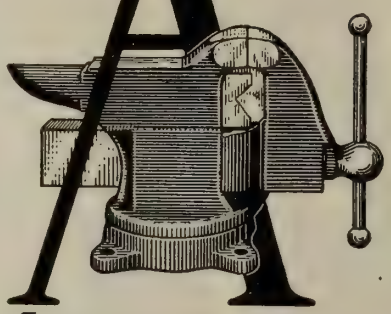
AUTOVISE



No other vise so suitable for all kinds of Automobile Repair Work

THIS VISE is a combination of vise jaws, pipe jaws and anvil. Made swivel base and stationary base types. Large size for heavy repair shop work. Small size for private garage.

Send for catalogue of largest and most complete line of vises made.

VISES *A Type and Size for Every Service*

ROCK ISLAND MFG. CO.
Rock Island, Illinois

"I can sift ashes now."

Canada Dustless Ash Sifter

makes ash sifting thorough, easy and clean

Permits no waste, cuts coal bills in two, and lasts a lifetime. A turn of the handle and ashes sift into barrel. Unburned coal drops into scuttle.

Sell one to a home and you'll soon sell to the next door neighbor, as users invariably recommend them.

Sold by leading hardware dealers.

Write for particulars.

J. SAMUELS, 275 Queen St. W., Toronto, Ontario

The Magnet Two Styles

A Hand or Power Washing Machine you can place practically in every home in your community, particularly where gasoline, steam engine, electric or windmill power is available.

The DEMAND, the MARKET and the PROFIT are all there.

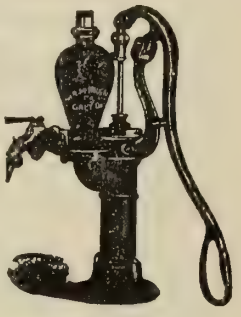
The mechanism is the same on both style machines, except the fly wheel, which for the power machine has a flat rim for belt. The gearing is all on side of tub instead of cover, which can be raised without removing belt or stopping the machine. Get a full description anyway. Made only by

CUMMER-DOWSWELL, Ltd., Hamilton, Canada

GOOD PUMPS WITH GOOD PROFITS

We are looking for the pump dealer who knows that selling good pumps pay in good-will.

McDougall Pumps are well made, properly fitted, good through and through "Aremacdee" Brand.



Every pump sold stays sold and stays in good order.

Metal Hand or Motor Pumps — for Force or Lift use — every size, style, kind, in our big catalogue.

HELLER-ALLER TANK HEATER

the only thing on earth that will keep a stock tank from freezing

Heater is Made of High-Grade Charcoal Iron, and Will Remain on Bottom of Tank Without Being Fastened Down.

The entire heater is cast in one piece, including the draft flue, takes on a uniform temperature and will not crack. Is 24 inches high (exclusive of pipe), and 12 inches in diameter. Has ash pan and grate, and basket, firepot and grate; ALL heavy cast iron.

Will burn any kind of fuel and with proper care will last a lifetime.

One farmer customer will lead to many others. Drop a line for full details.

"BAKER" Windmills, Pumps, Tanks, Pump Tanks. Prompt Shipments—Good Goods.

DIRECTORY OF MANUFACTURERS

Hardware and Metal receives, almost daily, enquiries for the names of manufacturers of various lines. These enquiries come from wholesalers, manufacturers and retail dealers, who usually intimate they have looked through Hardware and Metal but cannot find any firm advertising the line in question. In many cases these firms are anxious to secure this information at once. This page enables manufacturers to keep constantly before the trade lines which it would not pay to advertise in larger space.

"AYLMER" Force Pumps

They are certain to sell easily because it has several advantages over the ordinary style.
Has longer stroke, more power, and works easier.
While designed for hand use it can be readily converted into a Windmill Pump by the addition of a flat bar, which screws into the cross head at top.
It will be to your interest to write for full particulars now.

B. J. COGHLIN CO., LIMITED, Office and Factory: Ontario St. East, MONTREAL

THE PROGRESSIVE MANUFACTURING CO.
Torrington, Conn., U.S.A.

FORSTNER BITS

bore their way right through tough, hard, knotty, cross-grained wood and leave a smooth hole and a clean surface. That's performance. THEY DIFFER FROM ALL OTHER BITS, BEING GUIDED BY THE RIM INSTEAD OF THE CENTER. That's scientific construction. They bore any arc of a circle and can be guided in any direction. That's adaptability.

Made for Brace—made for machine. Packed singly—packed in sets. That's convenience. And they sell to Wood Workers, Carpenters, Cabinet Makers and others. That's why you should sell them. Order through your jobber to-day.

The Most Information The Most Entertainment —and all Made-in-Canada

Here are a few of the features which make the October issue of MacLean's the best number yet put out by this aggressive magazine.

"The Woman Question," by *Stephen Leacock,* an article that presents a new viewpoint on a vexed question. It is presented in the virile, readable style of Canada's great humorist.

"Canada's Opportunity," by *Agnes C. Laut,* a powerful article on financial and trade conditions arising out of the war.

"Tryst," by *Alan Sullivan,* a short story that for sheer perfection of style equals anything that Mr. Sullivan has ever done.

"The Wicked Partner," by *H. F. Gadsby,* a light sketch of the Hon. Robert Rogers, written not from the political but from the human side.

"The Years of the Wicked," by *Hopkins Moorhouse,* a short story that is different from anything you have ever read before—one of the best things yet turned out by this rising young author.

"The New British Columbia," by *Norman Lambert,* an article on the Northern part of the mountain province which for vivid descriptive power has never been excelled. This is illustrated by a series of remarkably beautiful photographs of the Rockies.

"The Next Man Up," by *W. A. Craick,* an article on the men who are second in command of the big corporations of Canada. It gives an inside picture of the workings of some of the big railways and banks.

There are nine other stories and articles, all of a high order, and *our Review of Reviews Department, which contains condensed versions of the best articles which appeared during the previous month in the magazines of the world. This is one of the biggest features of MacLean's Magazine and is in itself of such value that you need MacLean's for this department alone. There are twenty articles in the October issue carefully selected as the most informative and interesting, published the world over.*

Special Offer—To new subscribers only. In order to introduce MacLean's Magazine into homes where it is not now read, we are giving the magazine for eighteen months for price of twelve—see coupon below.

GOOD STENOGRAPHERS ARE WHAT every employer wants. The place to get good stenographers is at the Remington Employment Department. No charge for the service. Remington Typewriter Co., Ltd., 144 Bay St., Toronto.

ESTIMATING. BY EDWARD NICHOLS, Architect. 128 pp., 22 illus. Cloth binding. Containing invaluable information for the use of Architects, Contractors, Builders, Plumbers and Heaters, Painters, Roofers, Cornice-Makers, and other workers in the building trades. This handbook tells just how to go about the task of making an estimate intelligently. Price, postage paid, $1.00. MacLean Publishing Co., Ltd., 143-53 University Ave., Toronto.

HARDWARE STORE BUSINESS METHODS —The authors of the articles in this book are for the most part practical and progressive hardware merchants. The embodiment in these articles of the experience of such able and enterprising men and the suggestiveness of the principles and maxims presented make this volume of infinite value to that trade. The 40 subjects discussed include: Rules and Regulations for the Hardware Store; Hardware Buyer; Good Methods in Stock Taking; Prices and Catalogues; Collecting Accounts; The Merchant and His Employees; Changing Business Conditions and How to Meet Them; Profit Figuring System; Starting in Business; Changing a Credit into a Cash Business, etc. 220 pages. Price $1.10, postage paid. MacLean Pub. Co., 143 University Ave., Toronto.

HARDWARE WINDOW DRESSING—THIS is the first book ever written devoted exclusively to Hardware Display. There are 256 pages and over 200 illustrations with full working descriptions. It is the purpose of this book to illustrate and explain how hardware windows may be dressed to the best advantage—how they can be made to sell goods. It is not a theoretical work but a collection of specimens of the best work and ideas of the most expert window dressers in the world. These men have contributed their experience covering the many phases of hardware window display. This volume, therefore, represents the sum total of information on this subject presented as concisely as is consistent with clearness. By following the simple illustrated directions given in "Hardware Window Dressing" any clever clerk can put in good hardware displays at no cost whatever. Size 8x11 inches. Price $2.60 postpaid. MacLean Pub. Co., 143 University Ave., Toronto.

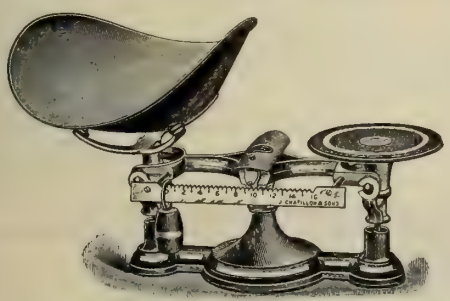
Preserving Time—Scale Time

Every housewife needs an accurate scale when she starts her preserving. Success in preserving is not so much a question of recipes, as it is of the proper quantity of different ingredients. Your customers will be sure to have what they want if you sell them

CHATILLON SCALES



Their enviable reputation has been earned by their accuracy, reliability, durability and high-grade construction.

Chatillon Scales have a number of imitators but no superiors. All our scales are warranted to be accurate and perfect in workmanship.

Write to us for illustrated catalogue or ask your jobber.

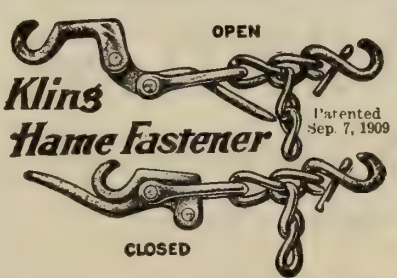
BIG

RESULTS
from small investments. Read Hardware & Metal's Want Ad. Page.

MADE IN CANADA



Like the British Navy, there is no getting away from it. Always ready for instant use. On or off in a jiffy. Holds like grim death. So simple a child can fasten it. Keeps the hames always uniformly tight. Safe and Strong. A fast seller, with a big profit for the dealer.

All Jobbers should or do sell it. $2.25 per dozen.

D. C. ROSS & COMPANY
56 Colborne Street Toronto, Ontario
SALES AGENTS

"It is my opinion that for big game the Ross .280 Rifle is the best in the world."

B. K. Miller, Wild Rose, Wis., U.S.A.

Mr. Miller adds:—"I have hunted and fished in various parts of the world, including British East Africa, but I have never seen a gun the equal of the Ross .280 for big game."

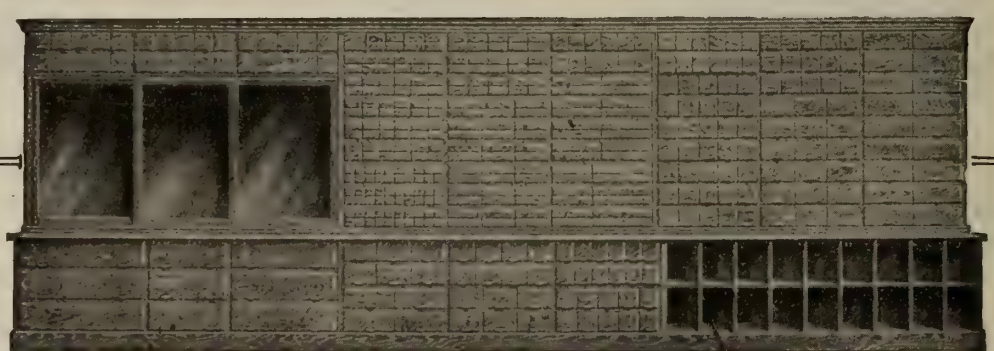
Dealers find this rifle, which is enthusiastically praised by the keenest Canadian as well as American sportsmen, a valuable addition to their stock.

The Ross .303 Sporting Models are also very popular.

Their accuracy and reliability combined with their comparatively low price make them universal favourites.

Another good seller is the Ross .22 Cadet Rifle. It is adopted by the Government for Cadet Corps, and is a strong, reliable and accurate arm suitable for the roughest use on camp or trail.

ROSS RIFLE COMPANY - QUEBEC



ATTRACTIVE, CONVENIENT, DURABLE, REASONABLE IN PRICE.

Our Patented Metal Shelf Boxes will improve the appearance of your store, and will enable you to give your customers quicker and more efficient service.

Advise us space you have available for shelf boxes and shelving, and we will sketch out plan and give you our best price for same.

Send for illustrated catalogue, it will interest you.

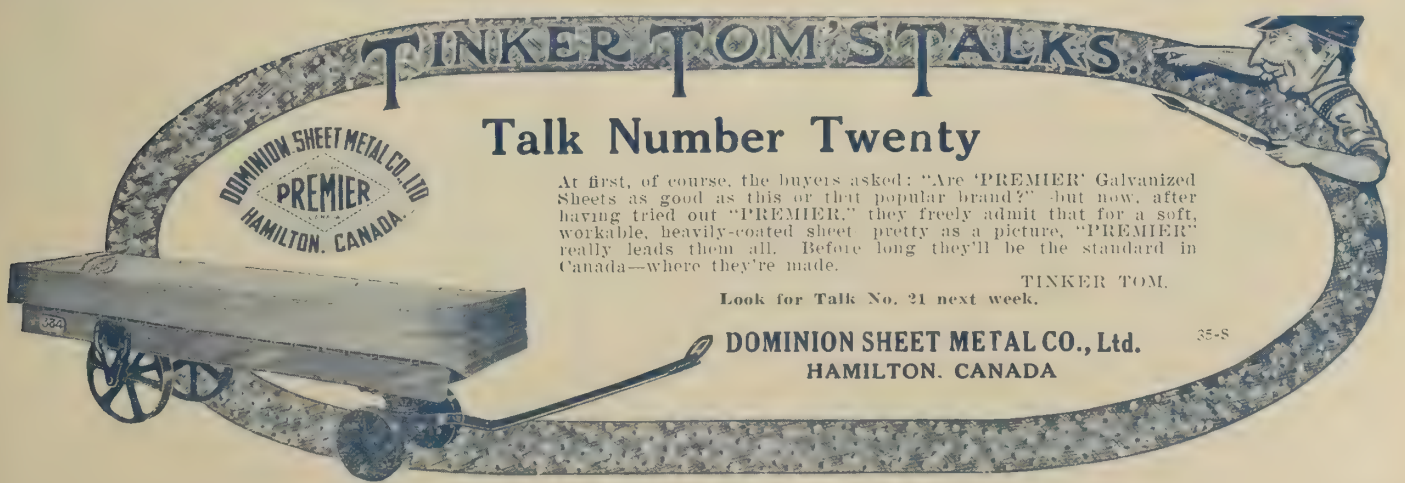
TINKER TOM'S TALKS



Talk Number Twenty

At first, of course, the buyers asked: "Are 'PREMIER' Galvanized Sheets as good as this or that popular brand?" but now, after having tried out "PREMIER," they freely admit that for a soft, workable, heavily-coated sheet pretty as a picture, "PREMIER" really leads them all. Before long they'll be the standard in Canada—where they're made.

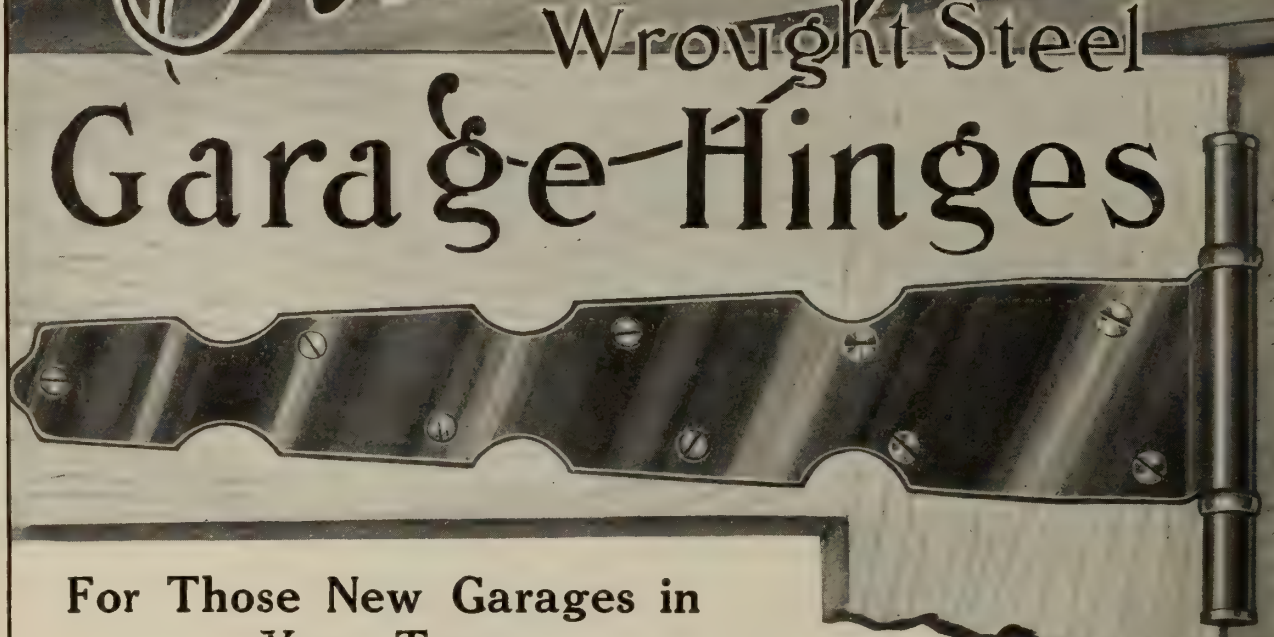
Stanley's Wrought Steel Garage Hinges



For Those New Garages in Your Town

10—24 and 36-inch sizes.

Equipped with Stanley Patented Ball-Bearing Washers.

No. 1457—10 and 24-inch ornamental strap; 1 1-16 inch offset for wood.

No. 1458—36-inch corrugated strap; 1 1-16 inch offset for wood.

No. 1459—36-inch corrugated strap; 2¼-inch offset for brick and concrete.

These Hinges are made of highest quality Wrought Steel, designed to meet the requirements of heavy garage doors. The Ball-Bearing Washers permit the door to swing smoothly and easily, and are so constructed that the case-hardened tool steel bearings are protected from dust and moisture, making oiling unnecessary. Each bearing will support a crushing weight of 2,000 pounds.

These hinges permit closing the doors tightly, which is impossible with hangers.

We manufacture complete "Trim" for the garage door, and shall send catalog "W" on request.

Dust and Moisture Proof Ball-Bearing Washer. Patented.

Hose Service for Your Customers

Your customers put it up to you to sell them satisfactory goods. They know you don't *make* the articles you sell; but they figure you ought to use your experience and knowledge to protect them against trouble and dissatisfaction.

If you sell a customer *one* article which is unsatisfactory—which does not give him good service—he may discount *everything else* in your store.

So the Garden Hose you sell must be the best. It must not kink; the inner rubber tube must not harden and crack prematurely; the cover must stand dragging over rough surfaces without cutting or tearing.

Goodyear "Nero" brand hose meets all these requirements. It is a woven hose—the thread is woven right into the hose during manufacture by special machinery. Thus there are no joints or seams, and the hose is absolutely non-kinking.

"Nero" comes in continuous lengths up to 500 feet. That means you can sell your customers any length they require without having short, unsaleable lengths left over at the end of the season.

"Nero" is made ½ inch and ¾ inch diameter.

"Reliable" Brand

"Reliable" is a high-grade garden hose of "wrapped" fabric construction. The fabric is stitched together at the edges—not just stuck. This hose is made by the same expert men and methods as "Nero" hose. Comes in 50-foot lengths. Made ½-inch diameter, 3 and 4 plies; ¾-inch diameter, 3, 4 and 5 plies.

Goodyear Garden Hose has been extensively advertised to the consumer by means of attractive copy in newspapers. This advertising campaign will be continued next season.

We're Educating Your Customers For You

—teaching them the economy of discarding a file when it is half worn.

In all the papers worth while, circulating among the big file users, we're running a consistent advertising campaign year after year.

And with this behind you it should be a simple matter for you to impress upon your customer that he is losing money by using a file after it has reached its "inefficient" point.

And you'll be able to sell two files where you now sell only one—

But, to keep the good-will of your customer, see that he gets one of the following brands:

KEARNEY & FOOT
GREAT WESTERN
AMERICAN
ARCADE
GLOBE
(Made in Canada)

Over 90% of the files used in Canada are our output.

Over 10,000 dealers stock them.

They pay a good margin of profit and you get a quick turnover.

See that you get your share of Canada's file requirements.

Nicholson File Company
Port Hope (JOBBERS EVERYWHERE) **Ontario**

"COMFY"

Weather-Strip

is a line that sells on sight.

Sells at a very low figure in comparison with ordinary weatherstrips, is easily put on, very durable and is in every way as effective in keeping out the cold.

Put up in cartons of one pound each, or 35 feet in carton.

Burlington-Windsor Blanket Co., Limited
TORONTO, CANADA

Like the onward march of the glacier, the force of example is irresistible, but infinitely slow. Advertising, however, is like the snowstorm that covers the country in a single night—but don't forget that if you want to keep the country covered you have got to keep the snow falling or the heat of competition will melt it.

40% DISCOUNT TO DEALERS FOR DOZEN LOTS F.O.B. ST. CATHARINES. Terms 2% 30 days.

A Quick Sales Producer

The steering is done by simply bending the runner and NOT the wooden frame.

The runner (patented) is made of BEST SILVER SPRING STEEL and for that reason it will always keep its shape, is flexible, lasting and has a smooth running surface and being GROOVED is guaranteed NOT to skid.

The sled bench (patented) is a solid stamping of WROUGHT STEEL, being lighter, neater and stronger than ANY OTHER method of construction.

The top (patented) DOES NOT MOVE, thereby enabling the operator to guide the sled much easier without danger of pinching the fingers as is common with OTHER flexible sleds.

The safety sled is made from the best suitable material and EVERY PART riveted. They are neatly striped and decorated.

Packed two in a bundle. No shipment made of less than 1/6 of a dozen. The best assortment to buy in dozen lots is:—

1/6 of a dozen, 33 inches. 2/3 of a dozen, 37 inches.
1/6 of a dozen, 41 inches.

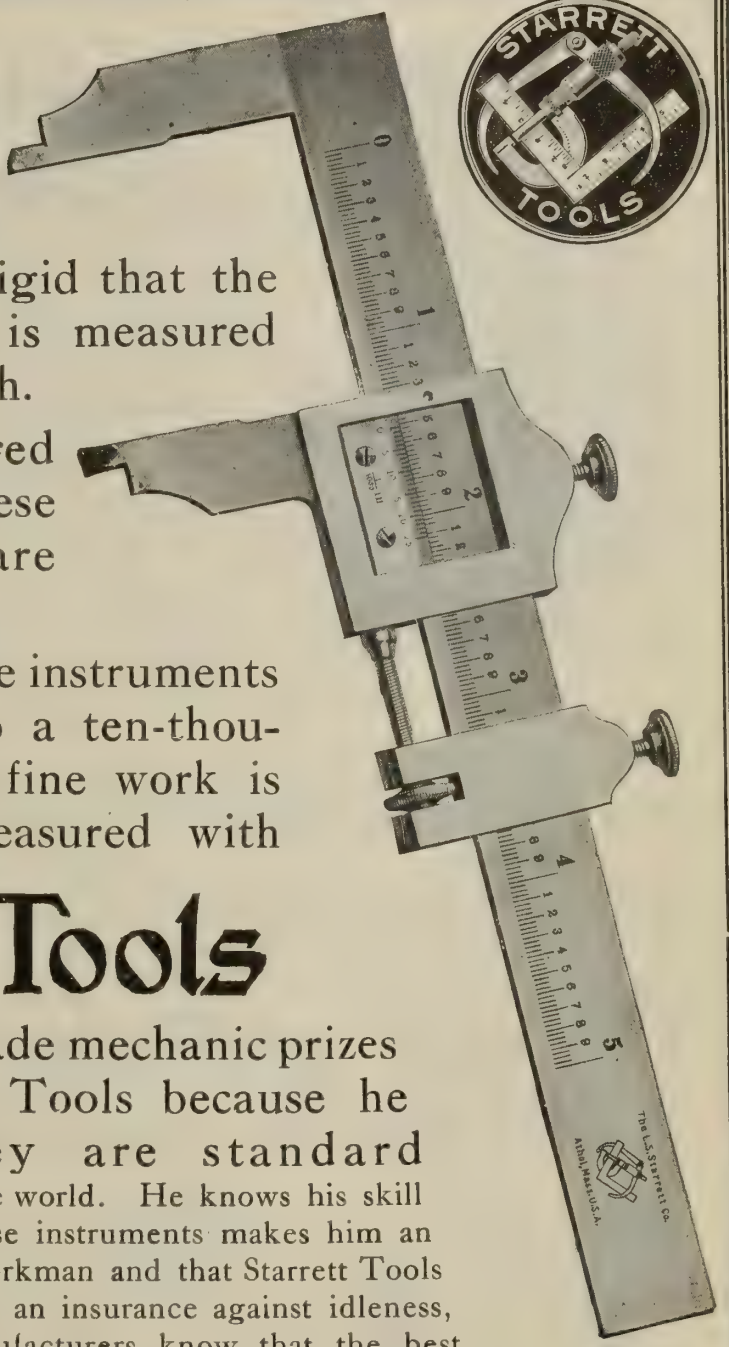
Accuracy

INSPECTION in modern factories has become so rigid that the accuracy of workmanship is measured to the thousandth of an inch.

Think of the accuracy required in the factory where these measuring instruments are made.

In the Starrett factory, where instruments are made that measure to a ten-thousandth of an inch, all the fine work is laid out—scribed and measured with

Starrett Tools



Every high-grade mechanic prizes his Starrett Tools because he knows they are standard throughout the world. He knows his skill aided by these instruments makes him an accurate workman and that Starrett Tools are almost an insurance against idleness, for manufacturers know that the best workmen use the best tools.

Starrett Tools include 2100 styles and sizes of fine instruments—steel rules, tapes, squares, levels, hack saws, calipers and dividers, micrometers, gages, speed indicators and many others.

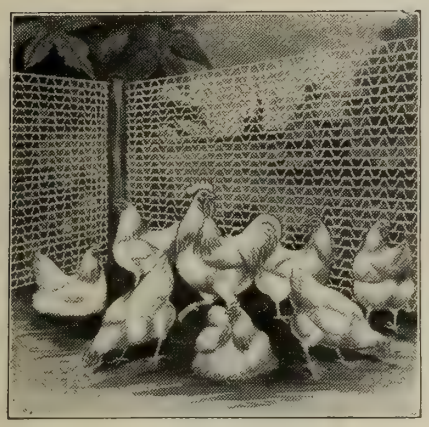
Our New Poultry Fenceis the Acme of Poultry Fences



Built on miniature scale of farm fence interwoven with parallel wires and hinge joints so it stretches to posts straight, even and nice without buckling, bagging or sagging.

It's so stiff and satisfactory, it does not require top rail and base board or so many posts as old style netting.

Guaranteed 5 to 6 times as strong and at least 100 per cent. better in every way. All parallel wires are of even length and all mesh of uniform size. They can't be otherwise the way it is made.

Made in heights from 12 to 72 inches. Galvanized. Put up in 150-foot rolls and sold by the square foot.

It's not merely a substitute for old style netting. *It's something much better for the consumer and sells on sight.* It's the strongest, most sightly and best fence for the purpose yet invented.

Do not purchase Poultry netting or fencing until you have seen our Poultry Fencing—it will be a surprise and a revelation to you and your trade.

Those who have used our Poultry Fencing will not go back to the old style netting. Better place your order now.

THESE MARBLE SPECIALTIES ARE WINNERS RIGHT NOW

Cool, snappy weather—men going to the woods by the hundreds after deer and other game. These Marble specialties—every one of them—should be in each man's kit. If YOUR stock is getting low, send your jobber a hurry-up order.

MARBLE'S
Handy Compass
—never goes wrong. It is attached to outside of coat and is waterproof. Always in sight and balances so readily direction can be taken while walking. Can not demagnetize. List prices, $1 to $1.50.

MARBLE'S Waterproof Match Box
—is really waterproof and still easily opened. Made of seamless brass about the size of a 10-gauge shell, fitted with rubber-lined cover. Holds enough matches to last several days. List price, 5 c.

MARBLE'S Auxiliary Cartridge
These auxiliary cartridges, made for practically all sporting and military rifles, shoot pistol cartridges just as accurately as regular rifle ammunition. The auxiliary is loaded in magazine or breech, just the same as the regular cartridge. Bullet is set into rifling. Without harm the firing pin of gun strikes firing pin in auxiliary, exploding cartridge. Bullet starts with a twist and does NOT strip nor lead barrel. Does not harm rifle firing pin.
List price, 75c each, with LIBERAL DISCOUNT to dealers.

MARBLE'S Woodcraft Hunting Knife
The biggest value ever offered in a hunting knife. Retails at $1.50, yet has the shape, weight, quality and desirable features of $2.50 and $3.00 knives. Adapted for sticking, cleaning, skinning, slicing, chopping bone, and all other knife work. High-grade steel—bevel blade, thick at back, tapering to a fine point. Handle of laminated leather. A Knife worthy of the name "Marble," and one that will please your customers. List price, $1.50.

MARBLE'S GAME GETTER GUN

A Good All-Purpose Gun—A "Dandy" Side Arm
Calibers .22 and .44 or .22 and .410
Lengths of barrels, 12, 15 and 18 inches
Stock adjustable to any "drop"—folds up—or detaches. Holster hangs on shoulder (over or under coat). The Game Getter is easily carried—the small weight is not noticed—and it is ready for instant action. A Pull on the stock swings it to and locks it at desired drop, making a gun of full proportions—as true, as steady and reliable as any gun made. A push on the striker sets it for either firing pin. Either barrel is used without change of sights or adjustment.
Every hunter and trapper ought to have a Game-Getter, no matter how many other guns he may own.

Ask Your Jobber
for Marble Specialties shown here—and all the 60 other Marble live numbers.

TOBOGGANS—"THE CANADIAN MAID"

TWO GREAT FEATURES OF "THE CANADIAN MAID"

First—The Raised Front. For about eighteen inches the front of the toboggan has a gradual slant. Result—the toboggan does not PUSH the snow in front of it, and thus you have GREATER SPEED, AN EVEN AND COMFORTABLE MOTION and a LONGER RIDE. Note this sketch—which shows how other toboggans without this feature shove the snow along.

Second—The Three Runners—which give emphasis to the above-mentioned feature and which guarantee safety, as it aids in controlling the toboggan. The runners hold the toboggan to the track. With two, six or eight passengers, the "Canadian Maid" No. 4 toboggan is equally easy to control, the runners helping materially. Accidents have occurred which can be explained by the fact that the usual flat-bottom toboggan was used. Iron and steel Runners fitted at slight additional cost.

PACK-TOBOGGANS A SPECIALTY. Full information on request. Write for Prices and Dealers' Discounts.

Handle your Oils and Gasoline with the

WAYNE PUMP

IT PREVENTS WASTE DUE TO EVAPORATION, LEAKAGE AND SPILLING AND MAKES THESE GOODS MORE PROFITABLE.

It saves time and labor, as there is no constant filling and handling of measuring cups, and does away with dust and unpleasantness.

Throws a pint, quart, half-gallon or gallon, and measures exactly.

Works easily, and when not in use can be securely locked. Gears are completely housed. All parts accurately machined and thoroughly tested, and are interchangeable.

If you are interested in a clean, safe, money-saving way of handling oils and gasolines, jot down a line for full particulars on the Wayne System NOW.

SANITATIVE METHODS

The trend of public thought to-day, as influenced by the hygienic teachings of doctors and health authorities through the mediums of our newspapers and magazines, is in the direction of ABSOLUTE CLEANLINESS in every sphere of our daily life.

"A place for everything, and everything in its place."

This maxim is never seen to better advantage than in our homes. One of the greatest causes of disease and discomfort arises from exposed garbage. Keep your garbage where it will not infect the air you breathe. Keep it in a COVERED RECEPTACLE.

"WRICO" Garbage Cans are strong—weather-proof—batter-proof—smash-proof—ashman-proof.

Made in three sizes.

OUR NO. 10 IS A NEW SIZE—NEW DESIGN.

Diam. 15 in. Height 20 in. Capacity 11 gallons.

¾ in. rim at bottom. Heavy steel hoop, ¼ in. thick, 2 in. wide, AT TOP.

When a scavenger empties a can, he turns it upside-down, and slams the top edge of the can down in the garbage wagon. That is why we protect the TOP EDGE of our cans with strong steel rims.

Write for particulars and prices of our line of "WRICO" Garbage Receptacles.

RE-ORDERS

In any business, the best test of success is re-orders.

With few exceptions, the house that has to get its trade each year from entirely new customers is under suspicion. If the dealings were fair, and the price right, and if the goods stood up and proved their quality, the same customers ought to come back and order again and again.

Some of our customers have been buying our rubber goods, week in and week out, for over fifty years.

Our line-up is complete, our quality is unexcelled and our prices are right. Let us show you what we can do.

IT IS OUR DESIRE TO SERVE YOU

Don't Hide the Goods You Want to Sell

With the Pexto Plier Display you can put the best sellers of a famous line where they'll attract trade without taking up a lot of room and with no effort on your part.

Handsomely finished in four colors. Large enough to command attention; small enough to be easily handled—exact size 22 x 28 inches.

Goes anywhere in the store, in the window, on the wall, on the counter—it stands or hangs.

Puts the most popular styles of pliers before the customer at a glance, doing away with handling a lot of goods over the counter and taking your clerks' time.

Can be varied to meet your own particular needs, with Linemen's, Electricians', Milliners', Jewelers', Opticians' and other styles of pliers.

There are 60 styles and 175 sizes in the Pexto line, including both box-joint and lap-joint patterns. Classified facts about entire line on back of display.

If your jobber can't supply you with a Plier Display, write us.

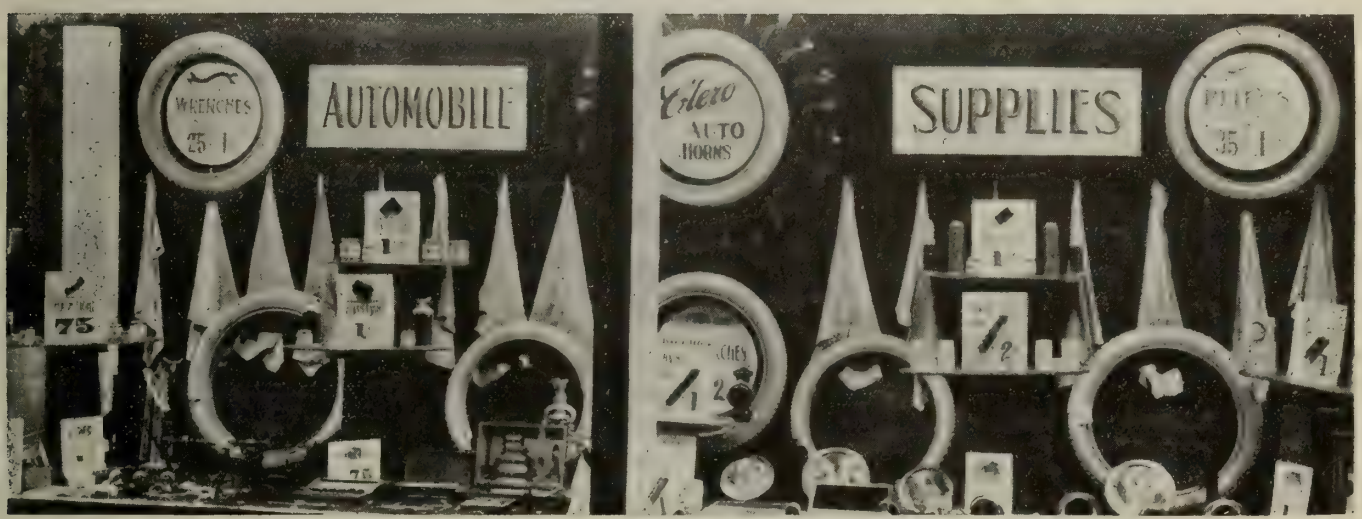
HARDWARE AND METAL

Established 1888. TORONTO, OCTOBER 23, 1915 Vol. 27. No 43



Details regarding the above excellent dislay of auto accessories are given in the accompanying article.

Suggestion for Auto Accessory Display

How the Above Practical Display Was Arranged — Importance of Auto Accessory Line—5 and 10 Cent Store Selling Parts for Cars—Good Demand in Some Places.

DESPITE the fact that the auto accessory line is a comparatively recent addition to the numerous lines of goods now being stocked by retail hardwaremen, many exceptionally attractive and practical window displays of auto accessories have been arranged by Canadian window trimmers. The display shown in the accompanying illustration, arranged by C. H. Smith for the J. H. Ashdown Hardware Co., Winnipeg, is a very effective, and yet an easily made display, from which the average window trimmer can secure many valuable suggestions for future displays.

The various articles shown are those in which the autoist is particularly interested and include, tires, chamois, wrenches, pumps, jacks, horns, lamps, tool kits, polishes, oils, dry cells, spark plugs, scrapers, files, chisels and many other articles which come under the category of auto accessories.

The background of the display, although simply made, is very attractive. In the centre of the background, there is a display of wrenches surrounding an auto tire. A circular show card surrounded by the tire features auto horns. The large show cards, "AUTOMOBILE SUPPLIES," fit in nicely on the background and fill up the space between the centre display and the tires, etc., on either side. Chamois suspended from small nails also help to form a suitable background.

Five display stands have been used to display package goods including polishes, oils, greases, etc. On the floor of the window is shown a wide assortment of accessories ranging from individual tools to complete kits. Lamps, pumps, etc., are also shown on the floor of the window.

Use of Show Cards

One of the most striking features of the window, however, is the neat and attractive manner in which electrical flash lights of various kinds have been displayed on neat show cards giving the names of the articles and also the price. The flashlights have been attached to the cards with fine wire. Spark plugs have also been featured in the same manner.

Any window trimmer who can do showcard writing can make attractive display cards similar to those shown in the display.

Five and Ten-Cent Stores

The auto accessory line, in the future will be one of the most important lines carried by retail hardware firms. With the growth of the auto industry, and the large annual increase in the number of auto owners in Canada, the demand for accessories will become greater as the years pass by.

Even the syndicate stores are taking notice of the growing demand for auto accessories. An American automobile trade journal tells of a 5 and 10-cent

store in Philadelphia, that has a special counter, on which are displayed parts for Ford cars. The journal says in part:

"The automobile industry is certainly being standardized and will soon be on a par with sewing machines, tooth brushes and other quantity production manufacturers. A recent trip through a five and ten-cent store in Philadelphia brought to light the fact that one ten-cent counter was devoted exclusively to the sale of parts for Ford cars at ten cents each. Here was displayed such articles as bow sockets, piston rings, grease cups, valves, and a dozen other parts for the well-known car. This is said to be the first store in Philadelphia to handle automobile parts on a ten-cent counter."

The very fact that the five and ten-cent stores are stocking accessories shows that there must be a big demand and a ready sale for such goods.

Buyers for five and ten-cent stores make a close study of market conditions, and the needs of the public and when they take on a new line it is because there is a demand for the goods. But there are hundreds of articles needed by the autoist which cannot be sold by the five and ten-cent stores, and these lines, most of which will bear a good margin of profit are the ones for which there will be a big demand through hardware stores.

Many hardware firms have been carrying auto accessories for several years past, and have worked up a big trade in this line. Other firms have started recently in a small way, while there are a great many who contemplate adding the line in the near future.

The success or failure of an auto accessory department will depend largely upon local conditions and the efforts devoted to the line by the merchant. In a district where there are very few automobiles it would be very unwise to put in a heavy stock of auto accessories. Unless there is a need or demand for goods there is no justification for a merchant putting in a stock unless the merchant is of the opinion that a demand for the goods can be worked up.

There are no doubt some retail merchants who would not be justified in putting in a stock of auto accessories, but on the other hand there is danger of other merchants overlooking opportunities which do exist.

Full hunting goods window arranged by W. A. Schaefer for M. Weichel & Son, Waterloo, Ont. The background consists of two hunting scenes supplied by a manufacturer of ammunition; two arches covered with green crepe paper and evergreen branches. Small shelves attached to the arches are used for holding packages of cartridges, etc. Six red, white and blue electric lamps have been fitted in the arches, and when illuminated present a very attractive appearance. The floor of the window is covered with leaves, among which are displayed boxes of ammunition, etc. A tree may be seen in one corner of the window. Directly in front of the tree a fire-pot is suspended by an iron chain from tree branches. Below the fire-pot a fire-place has been built of sticks, branches, etc. Below the pot and surrounded by fuel, but not exposed to view is an electric fan with red streamers attached. When in motion the streamers give the appearance of flames. A ruby electric light globe is used at night to give a red glare. The tent, supposed to be the camper's headquarters, is flying the British flag, and also has a lantern hanging on the outside. Other articles used to give the display a distinctly hunting atmosphere are logs, stumps, squirrels, birds, etc.

CANADA'S GRAIN CROPS

The Census and Statistics Office this week issued its monthly report on the field crops of Canada, based upon returns made by crop-reporting correspondents at the end of September.

For wheat, oats, rye and flax the provisional estimate now issued shows yields higher even than those reported a month ago; but in the case of barley and oats the present estimate is less than that of August 31. The total wheat crop of Canada is now placed at 336,258,000 bushels from 12,986,400 acres, representing an average yield per acre of 25.89 bushels. This total is 174,978,000 bushels more than last year's inferior yield of 161,280,000 bushels, the crop this year being therefore more than double, or 108 per cent. more than that of last year. It is 104,541,000 bushels, or 45 per cent. in excess of the previous highest yield of 231,717,000 bushels in 1913 and 140,232,000 bushels or 72 per cent. in excess of the annual average yield of 196,026,000 bushels for the five years 1910 to 1914. Of oats the revised total yield is 481,035,500 bushels from 11,365,000 acres, an average per acre of 42.33 bushels. Barley comes out at 50,868,000 bushels from 1,509,350 acres, an average per acre of 33.70 bushels. Rye is now 2,478,500 bushels from 112,300 acres, or 22.07 bushels per acre, and flaxseed 12,604,700 bushels from 1,009,600 acres, or 12.48 bushels per acre. In the three Northwest provinces the estimated yield of wheat is 304,200,000 bushels, and of oats 305,680,000 bushels. The remaining grain crops of Canada, whose yields are now reported on for the first time this year, are as follows: Peas, 3,240,400 bushels from 196,210 acres, an average of 16.52 bushels per acre; beans, 594,000 bushels, 43,310 acres 13.71 bushels per acre; buckwheat, 8,101,000 bushels, 343,800, acres, 23.5 bushels per acre; mixed grains, 17,128,500 bushels, 466,800 acres, 36.69 bushels per acre; corn for husking, 14,594,000 bushels, 253,300 acres, 57.62 bushels per acre. In arriving at these estimates certain deductions have been made for quantities reported as destroyed by the weather in the Province of On-

(Continued on page 39.)

A Demonstrator in the Window

How a Store in Montreal Financial District Stirred Up Interest in a Sewing Machine Motor and Made Big Sales—Hired Their Own Demonstrator — Xmas Gifts Sold Three Months in Advance.

THE James Walker Hardware Co., Montreal, in looking for new lines to sell to the ever expectant public, recently added a stock of sewing machine motors.

But sewing machine motors, like every other line of goods have to be displayed and demonstrated if they are to be sold in large numbers. Sewing machine motors looked like a good line for which there should be a ready sale, but Walker's store is in the centre of the commercial and financial district of Montreal, and is looked upon by many people as a men's store. John A. Frazer, head salesman of the Walker store, in planing how he could best bring the new line to the attention of the public, thought first of the show windows.

"Why," he asked, "if toastum poasties and puffed peanuts can be sold by demonstration, can't we sell sewing machine motors via our window?"

The scheme was laid before the manager who, acquiesced. A want ad. was inserted in an evening paper as follows:

YOUNG LADY TO DEMONSTRATE MOTOR attachment for sewing machine in our show window; must be neat in appearance and familiar with sewing machines. James Walker Hardware Company, St. James St.

The young lady shown in the picture was engaged for a week at a salary of twelve-fifty, and instructed to secure some nice pumps and silk hose. It was observed later that her foot exactly fitted the foot rest.

The young lady's task consisted in showing the sidewalk crowd how easily the motor was attached, without screws, clamps or tools of any kind, including her foot to turn on the power, and running a piece of cloth to and fro while the machine was in operation. She was assisted in her explanations by a series of large cards, to which she pointed from time to time. The lady did her work so well, one would have thought she had been demonstrating in store windows all her life.

Although most of the spectators were of the male species, the news traveled home with remarkable rapidity. Requests for demonstrations began to come in from private houses, and more delightful still, a call came from a large sewing circle for a machine to be sent up for the edification of its members.

Orders for Christmas

Altogether the experiment was a pronounced success. The opportunity was seized to take orders for Christmas. As a Christmas gift it appealed to many men, who willingly planked down their money three months in advance.

Quite a number of sales were made for immediate delivery. More than that, it advertised the store, laid the basis for much future business, and last, but not least, each machine netted the store a good profit.

The demonstration was referred to in the regular Walker advertisement in the daily newspapers. The ad. read as follows:—

EXTRAORDINARY!

The "Sew-e-z" Motor is really extraordinary, for it fits any sewing machine, and for the small sum of one cent an hour will do all the work connected with sewing.

It starts the machine instantly, does all the pedaling, will take one single stitch at a time or eight hundred stitches a minute.

The simplicity of it will appeal to you, for there are no bolts, screws or clamps —yet it is applied or removed instantly.

We are demonstrating the "Sew-e-z" in our window this week and you should be sure to see it, but if it is inconvenient for you to come down, telephone Main 3436 and we will have a young lady give you a demonstration in your own home.

Convention of Hardware Association

The Twenty-First Annual Convention of the National Hardware Association and the Twenty-Eighth Convention of the American Hardware Manufacturers' Association Held at Atlantic City

THE joint convention of the National Hardware Association and the American Hardware Manufacturers' Association was held at the Marlborough-Blenheim Hotel, Atlantic City, New Jersey, on October 13, 14, 15. From the standpoint of attendance and enthusiasm, the convention was one of the best in the history of the Association.

As customary at these conventions, the opening session and the entertainment features were shared with the American Hardware Manufacturers' Association, the members of the two organizations fraternizing with each other and renewing old acquaintances and friendships.

The opening session of the National Hardware Association was held in the Blenheim ballroom, and the great hall was filled with wholesalers, manufacturers, their ladies and others interested in the hardware business. The meeting was called to order by A. J. Bihler, president of the National Hardware Association.

Led by Charles J. Graham, vice-president of the American Hardware Manufacturers' Association, the entire gathering sang "God Bless Our Native Land," while every one stood.

The Reverend John R. Davis, D. D., pastor of the Bethlehem Presbyterian Church, Philadelphia, who for many years has been chaplain of these conventions, then led in a prayer.

Dr. Davis delivered an inspiring address in which he exhorted his hearers to continue in the good work they are doing to elevate their business and better the conditions under which they operate as well as those of the general public.

Charles Ireland moved that the inspiring address of Dr. Davis be published in pamphlet form for distribution, and the motion was carried unanimously.

President Bihler then delivered his annual address, which follows in part:

"Our fiscal year now closing has been an eventful one—a year of war and disorder, a year of tragedy and sorrow and strong demands upon the people in the cause of charity, a year in which the patience of our nation has been sorely tried, a year of unsatisfactory business conditions with many out of employment and with a greater number of business failures than for years past—and much of all this due to this 'war of wars.'

"I have no desire to talk upon the subject of war, but will you not join me in this wish: The hope of an early world-peace, such a peace as will be lasting, with honor and justice to all, and the early resumption of friendly business relations throughout the world?

"It cannot be said that business conditions during the past twelve months have been satisfactory. Our exports of cotton alone for the fiscal year ending June 30th decreased by some 739,000 bales, and its value was $234,000,000 less than that of the preceding year.

"Our total imports from Europe the first six months of 1914 were $444,000,000; for 1915 only $274,000,000. Our exports during the same period increased from $650,000,000 to $1,280,000,000. Today there is a trade balance in our favor of about $1,250,000,000, and increasing at the rate of $150,000,000 per month.

"This heavy increase in exports will shrink materially when the war ceases, and then will come a change in the character of our exports. We may look for a period of much activity on goods adapted to the field and farm, for reconstruction, for our cotton and foodstuffs. A demand for such varied products must benefit all sections, and the hardware trade will receive its full share.

"During the past few months there were hundreds of manufacturers employing additional labor and operating their plants to their full capacity, due to purchases of munitions of war. This, however, brings direct results to but a small proportion of our people.

"While financially the country is stronger, that "wide-spread prosperity benefiting all lines" is still for the future. Mercantile business shows recent improvement but is still below normal, and while we are gradually forging ahead, in my humble opinion, true and lasting prosperity will come only after the cessation of hostilities abroad, and when the gates of commerce are thrown wide open. In the meantime, let us "keep our house in order" and be prepared for a more active business which is sure to come."

The President also referred to the efforts of the Association towards a reduction from two cents to one cent in the postal rate, and stated that the Association assisted in organizing the National One Cent Letter Association. Reference was also made to the "Stevens Bill" to be again presented at the next session of Congress. The purpose of the act is to give protection to those who may desire to establish a resale price on their product, not only for the consuming public reached through the wholesalers, but to the wholesalers as well.

"There is a demand," said the President, " for national legislation that will protect the merchant from the price-cutter. The 'Stevens Bill' has the endorsement of many bodies of retail merchants."

The parcel post was also referred to in the President's address, and the statement was made that the parcel post has not redeemed the early promises of reducing the cost of living, etc. Rather it has been the means of building up a greater volume of business for a few large houses.

Secretary-treasurer T. James Fernley in his annual report referred to the rapid progress made by the Association during the year. The Secretary said in part:

"As has been ably outlined in the address of our President, the past year has been one of rapid developments in national matters, and these developments have had their influence on the hardware trade of the country, the manufacturing, retailing and wholesaling. The influence, too, has been felt in this organization.

"The members who have been in close touch with our work, both through correspondence and personal visit, have reported the past year to have been one of extra effort to maintain the volume of business, and it is our belief that great credit is due the members for their success, which has only been possible through the hardest kind of work and extra effort to keep a healthy volume of business going.

Usefulness of Middleman More Generally Conceded

"Inasmuch as this Asociation is composed of so-called middlemen, being wholesale distributors of hardware, and as the old question of the usefulness of the middleman is the subject of much comment, it is pleasing to report the fact that there does not now exist the question with regard to the value of his services that previously existed, but there is a willingness and readiness to credit his usefulness and to freely concede the fact that the wholesaler is needed to supply the market and that the retailer and consumer would be under an increasing cost if wholesaling in hardware were discontinued.

"The widespread distribution of the Prize Essays on the 'Value of the Wholesaler as a Distributor,' has been very instructive, and it is within our knowledge that many manufacturers and retailers have been deeply impressed with the logic and sound business sense of these articles.

"For instance, retailers who have been overbuying from the manufacturers, tying up a large amount of capital and making but small profits, have seen the wisdom of drawing their merchandise in quantities better suited to their business, and they have proven for themselves the fact that a five per cent. discount in price is often overbalanced many times by the capital tied up in the excessive stock of merchandise and the loss of the profit on the turnover."

William H. Ingersoll, of Robert H. Ingersoll & Brother, New York City, delivered an address on "Standardized Retail Prices in Relation to the Interests of Wholesalers." This address will appear in next week's issue of Hardware and Metal.

American Hardware Manufacturers' Meeting

The first business session of the American Hardware Manufacturers' Association was held on Wednesday afternoon and was called to order at 2.30 by President William H. Matthai. Like all following sessions, this was an executive one, and was held in the West Salarum.

President's address was in part as follows:

"A year has passed since we last gathered here. From the broadest viewpoint I fear it will be impossible to say that we come together under happier auspices. The world is still plunged deep in all the agony and woe of the greatest war it has known in its long and troubled history. Nations which even twelve months ago were still at peace have since been drawn into the struggle, and the end is not yet. Eleven out of every eighteen human beings are subjects or citizens of the powers at war. The killing, the wounding, the capturing are still going on upon a scale of which the world heretofore never knew. Four or five thousand men are being killed every day, and every twenty-four hours 15,000 more are either wounded or captured. All or nearly all, it must be remembered, in the very flower of manhood. Tens of thousand of square miles of thickly populated country have been fought over until their devastation is well nigh complete, and still the waves of war roll on. More than half the world is giving itself up to the destruction of life and property and is working at the task with far more zeal and efficiency than it has usually displayed in any peaceable pursuit.

"No one can say when all this will stop. It may be speedily, it may not be for months, or even perchance, for years. No one knows. One man's guess is worth as much or as little as another's.

"From the more limited standpoint of American business men conditions are, however, vastly better than they were in October, 1914. The war was then only but ten weeks old. As late as July 22, 1914, all the world except Mexico and Albania was at peace, and so far as we business men, occupied as we were in our own affairs, knew or supposed, was likely to continue so for an indefinite period. Thirteen days later we saw , as it seemed to us, that half mankind had gone crazy and were cutting each other's throats and destroying each other's property. We did not know the earth in which we lived. We could not tell what would happen next or how the most ordinary business of the world would or could be carried on. Some of the most usual and most-used markets, such as our exchanges, were closed tight. Since then we have found ourselves, so to speak. We see that when most men are smashing things there is double work for those who are making them. At present activity is intense in some lines of business in this country. When the war began we were debtors to Europe, and for a while exchange was so high that we could not hope to pay what we owed. Now Europe is so much our debtor that we can only continue to do business with her by taking her note instead of cash, as we have just done to the tune of half a billion dollars, and we have done it without in the slightest degree disturbing our markets or contracting our home credits.

"I have no wish to be understood as saying that business conditions are universally or even generally satisfactory. I do not think they are. It is hardly possible that they should be. All I want to emphasize is that in most lines they are far better than when we were last together. There is always need for caution, and in such a colossal crisis as that through which we are passing the call for caution is trebly imperative. With the world turned topsy-turvy, anything may happen and may happen quickly, too. Various incidents have showed us that at any moment our rights, our interests, or our honor may become involved. Fortunately the possibility of any such catastrophe is now far more remote than it has been at any time since the beginning of last February. Still, when men are shooting at each other, by-standers are in danger. A wise by-stander does not stand by any longer or any closer than he is forced to, but in proportion to the amount of shooting which is now going on, this globe of ours is a very small place after all, and the most prudent of by-standers cannot be sure that he will always keep out of range.

War Has Stopped Immigration

"Apart from such serious possibilities, the war is changing so many things in so many different ways that it is hard to forecast what the effect on the business and industry of this country will be. It alters and disarranges conditions in all sorts of ways. In the twelve months before the war began the net addition to our population by immigration from abroad was over seven hundred thous-

(Continued on page 34.)

HARDWARE & METAL

CANADA'S ONLY WEEKLY HARDWARE PAPER

Vol. XXVII. TORONTO, OCTOBER 23, 1915 No. 43

THE PARCEL POST

SUPPORTERS of the Canadian Parcel Post System very often refer to the so-called success of the system, in the United States, after which the Canadian system was modeled. That the United States system has not been the huge success that some people claim, is borne out by a statement by the President of the National Retail Hardware Association at the Atlantic City Convention last week. The President said in part: "On January 1, 1913, the parcel post infant was born. He had all the earmarks of a healthy child; he was limited in weight to 11 pounds, in length and girth to 72 inches and could cover a radius of 20 miles in the first zone. He has been constantly growing, his weight having increased to 50 pounds and the first zone has been extended to 50 miles, his length and girth has increased to 84 inches, and no one knows when he is going to stop growing.

"He has not redeemed his early promises of reducing the cost of living by being an important factor between farmer and producer, but he has been the medium through which a few large houses have built up a greater volume of business; to the average merchant he has failed to become a profit maker; on the contrary, he has still further increased the competition of the catalog houses and the large department stores of metropolitan cities, and the system is still far from being self-supporting.

"Originally limited to ordinary packages of merchandise, his scope has been so widened that he now takes care of fruits and vegetables, gold specie and occasionally a bale of hay. To the jobber, parcel post has been a source of extra expense, due to the increased number of packages, and also to the fact that cases of loss and damage in transit are frequent, and unless insured there appears to be no means of recovery.

"We understand that the Postal Progress League is working for the extension of the present Parcel Post Bill, but at one rate for the entire country. Continued agitation and publicity appears to be the only medium available to possibly prevent additional destructive legislation. The measure should at least be reduced to the first limits, both as to weight and measurement, and the actual cost of the service based on modern accounting should be ascertained, and proper rates then put into effect."

The Canadian parcel post bill was forced through Parliament after many set-backs; the fight extending over a number of years. It was strongly opposed by the business press of the country which showed that it was of value only to a few big stores in Montreal, Toronto and Winnipeg, and that it would build up these cities at the expense of the other centres and particularly the small towns and villages, which are so essential to satisfactory rural conditions. The Post Office officials and others promoting the Bill finally overcame the opposition by representing that under the zone system the proposed Parcel Post system would be of no value to the big departmental stores; that it was really in the interests of the smaller cities and towns.

The Bill was based on one adopted by the United States, but neither there or here has the zone system been found of value to the public at large. Instead, the big mail order houses send their goods and catalogues by express to Post Offices in zone centres from where they are distributed at a lower rate than the efficiently managed express companies can afford to carry them. It is apparently not paying in the States. A representative of one of the largest mail order houses in Chicago volunteered the information recently that the system was a great advantage to them, but some day the country would employ a good cost accountant who would discover that the business was being done at a heavy loss; that the country was paying much more to carry the parcels than they received from the shippers.

The present Canadian Parcel Post system is clearly transferring the business of centres to a few big cities, and if this business is being done at a loss, it is up to the Government and M.P.'s outside the big cities to deal with this matter. If these are the facts, as they undoubtedly are, in these times of heavy and increasing taxation, it would be a great public economy to abandon the present Parcel Post system entirely and establish one on a self-sustaining basis.

TRADING STAMPS

AMERICAN hardwaremen and trade journals have of late been discussing the "trading stamps" at considerable length. At the recent big convention at Atlantic City, one of the speakers, in referring to trading stamps and their effect on the hardware trade stated as follows:

"If this so-called game of 'Something for Nothing' continues to grow, I feel that it will become as great a menace to the merchant trade as the catalog house, and even to-day the business done by coupon and stamp companies runs up into the millions. It is not surprising to find that on certain items which can be had by the coupon system, the trade of the jobber and retailer is decreasing, and merchants generally will see how necessary it is for the preservation of their interests to push other lines of goods. Furthermore, the risk of loss in stocking 'prize' or 'coupon' goods must certainly be apparent to any jobber who gives the subject careful thought and consideration."

"Trading Stamp" operations in Canada are to a certain extent restrained by the provisions of the Trading Stamp Act. The act with all provisions was fully described in Hardware and Metal a short time ago.

THE STEEL TRADES

THE manufacture of munitions still retains first place in our metal-working plants. The demand for steel bars and billets continues unabated, and little change otherwise is evident. The various mills are operating right up to capacity, and some of them will be unable to take on further business for delivery this year. Consumers are even having difficulty in some cases in placing orders for 1916, as the mills decline to commit themselves for any extended period. As a matter of fact, it is hinted that advanced prices may prevail when they are in a position to take on more business.

The situation in the machine tool trade shows little change over that of the previous week. In some instances the delivery of necessary tools for shell production is being longer delayed, and several plants are meantime handicapped in their operations as a consequence. The demand for supplies continues brisk. However, some concerns who require duplicate machine parts to replace those broken or worn, and which must be procured from the United States, find great difficulty in securing these promptly.

Referring to steel conditions and prospects in the United States, the *American Metal Market* says in Part:

"The demand for steel is developing, both for export and for domestic consumption, and as the steel mills reached almost the limit of their capacity a couple of months ago it is obvious that a continuance of present trends will make the market stronger and stronger.

"As to exports, each month's statistics as they come out show a heavier movement, and as inquiry keeps up, while a great deal of material already contracted for is still to be delivered, the natural expectation is that exports will continue to increase. Considering the iron and steel the weight of which is returned in the Government statistics, the best calendar year we have had for exports, 1912, showed a monthly average of 245,000 gross tons. The exports in the first seven months of 1914, just preceding the war, averaged 140,000 tons a month.

"The outstanding fact in the steel scarcity of the past two months has been that the consuming industries of the United States as a whole have not been busy, so that if they should all become really busy it would be a question whence the steel would come for them. Demands generally are increasing. Structural steel lettings show a decrease, September showing 67% of the fabricating capacity contracted for, against 85% in August, a decrease of about 30,000 tons, but it is normal for the time of year that September should be light in structural bookings.

"Practically all the trends are in the direction of more steel being demanded as the months pass. The output can be increased very little. The open-hearth departments are already doing the best they can. The Bessemer departments can be pulled up somewhat, if more buyers can be induced to take Bessemer instead of open-hearth. The inducement in some instances will be Bessemer or nothing, so it is likely Bessemer will be selected. Apparently the slack will not prove sufficient, and constantly advancing prices for steel are in prospect."

THE TOY TRADE

CARE and conservatism have marked the buying of toys that has been done so far this fall, but in view of the improvement manifested in nearly all lines of business, many merchants are revising their estimates of quantities needed and therefore a larger filling in business is expected. To no line does this apply with more force than that of toys, for there is so much novelty in the new goods that with money more plentiful this cannot be overlooked. For years past Germany had the monopoly of toy making for the rest of the world, and while no one can deny her cleverness, of necessity there has been a certain sameness. Since the war it would seem as though every neutral nation as well as most of the Allies have started toy making industries. Toy making is taking root and flourishing in the British Isles, and also in Canada; America is developing the industry already started, and the clever Jap is seizing the present opportunity to capture a share of the toy business. With all these sources to draw from, the trade will find plenty of novelties in toys with which to make an attractive Christmas showing.

What Other Hardwaremen Do

DOES IT PAY?

The George Taylor Hardware Co., Cobalt, Ont., have adopted a novel method to ascertain whether or not the people in Cobalt and vicinity read the Taylor advertisements. Incidentally, it looks as though the method will cause a large number of people to read the advertisement. A large space was used in the Cobalt paper to make the announcement, which is self explanatory, and reads as follows:

DOES IT PAY TO ADVERTISE?

"We spend a lot of money continually by newspaper advertising in endeavoring to bring our wares before the public.

"Does it pay?

WE WANT TO KNOW

"We want some tangible evidence that our ads. in The Nugget are being read. We want to see some direct returns. To get these we outline a proposition that works to your benefit,—an offer that spells real dollars and cents to you and involves no effort on your part.

"We're going to give a Ten Per Cent. Cash Discount to every customer who buys an advertised article in our store and mentions to the clerk that the advertisement was read in the Nugget. Just say: 'I saw it in the Nugget.'

"Do you know what this means to you? You will buy a $7.50 shotgun for $6.75; a $15 heating stove for $13.50; a $22 rifle for $19.80; or a $44 cooking range for $39.60. It means that the utterance of these few words: 'I saw it in the Nugget,' gets your change back on your cash purchase that you would not otherwise get.

AND

it will enable us to know if our ads. are read. If they're worth while reading,—if they're interesting to you, and if money spent on newspaper advertising reaps returns.

"Watch our ads. They appear regularly in the Nugget. If you see an article you need advertised, come in and say, 'I saw it in the Nugget,' and secure your Ten Per Cent. Saving."

SANDWICH MEN FEATURING ACCESSORIES

A Toronto merchant, S. L. Pearson, 559 Yonge street, who a short time ago opened a store carrying a line of auto accessories, oils, etc., recently employed six sandwich men to traverse the business streets most frequented by autoists. The men had instruction to keep twenty-five paces apart, in order that motorists and pedestrians would have an opportunity to read the matter on the boards. The accompanying illustration shows the sandwich men on the march. The reading matter which appeared on the rear boards is given in the underline below the illustration.

After the sandwich men completed their beat they reversed the boards and started on a return trip to the store. On the return trip all boards bore similar messages as follows:—Front board: "We are going to the uptown automobile accessory store;" rear board: "Come with us to Pearson's, 559 Yonge street, automobile accessory store."

Mr. Pearson states that a great many new customers were secured as a result of this publicity stunt. The men were out for two weeks.

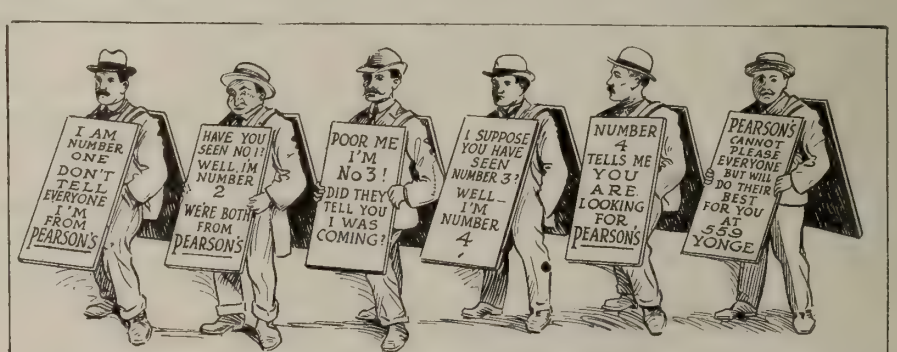
SAFETY RAZOR BLADES FREE

Ashdown's, Calgary, Alta., recently advertised a special for Saturday night from 7 to 10 o'clock. A free offer of safety razor blades was made as follows: With every $5 razor a 50c package of blades free; with every 6.50 or 7.50 razor a $1 set of razor blades free; with every $1 safety razor a cake of shaving soap free.

BUYING UP LEAD

Canada is Now Going Into New York as a Buyer

Despatches from New York indicate that Canada is now entering that market as a buyer of lead, a good sized contract having been placed there by the Shell Committee. However, the fact that Canada is making some purchases on the other side of the line will have no effect on the market. The Canadian market has been on the American basis, plus duty and other charges, and if Canadian producers cannot turn out sufficient supplies, then the balance can be made up in the States, where the output is only limited by the consumption.



Sandwich men employed by S. L. Pearson to advertise auto accessories. Reading matter on rear boards was as follows: No. 1. Don't you know Pearson's? Well, No. 2 will tell you; he's coming along. No. 2. Pearson's white store, Wellesley and Yonge. The up-town automobile accessory store. No. 3. Where do I come from? Why! Pearson's Automobile Accessory Store. No. 4. And when I left you they were asking for you. No. 5. Well, Pearson's are looking for you at 559 Yonge street. No. 6. I am it. I come and go. Pearson's come to stay.

Government Report on Wholesale Prices

How the Government Officials Secure Details Regarding Wholesale Prices to Compile Annual Report—Names of Papers From Which Prices are Taken.

THE Department of Labor, Ottawa, recently issued in book form (259 pages), a report on the course of wholesale prices in Canada during the year 1914. The report was prepared in accordance with directions from the Deputy Minister of the Department of Labor, and is the sixth on the subject to be issued by the Department. As in previous reports an attempt has been made to present in a comprehensive and systematic way, information directly bearing on current prices. It is interesting to note how the Government officials secure the details necessary for compiling the report.

Included in the report are 237 tables of prices showing wholesale prices on various lines. Of this number 109 tables have been taken from Canadian Grocer, and Hardware and Metal, two weekly trade papers published by the MacLean Publishing Co. The remaining 128 sets of tables have been taken from 17 other trade and technical papers and newspapers. Canadian Grocer which publishes weekly market reports on groceries, foodstuffs, etc., heads the list with 63 sets of tables. The other publications from which prices have been taken, and the number of tables used from them in the Government report are as follows:

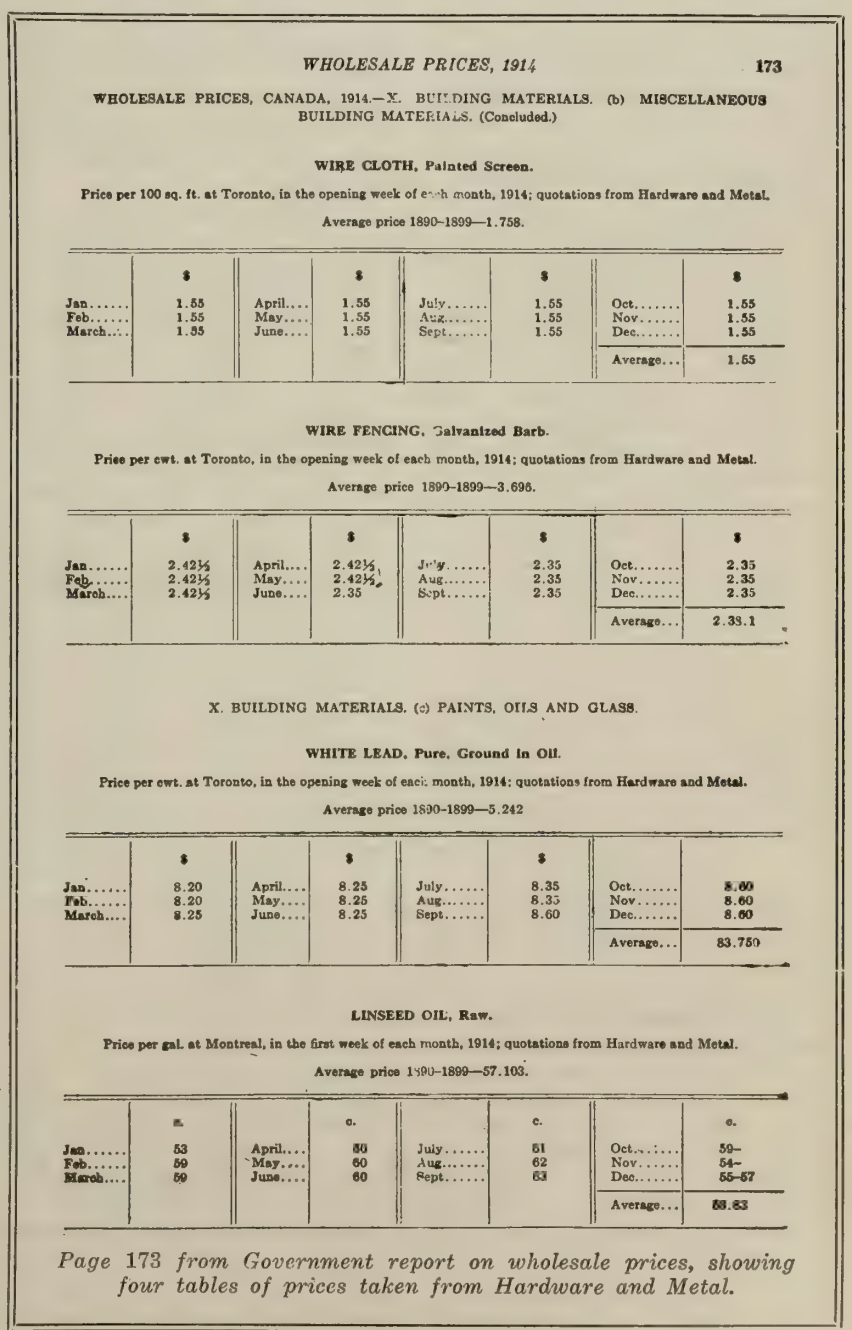
Hardware and Metal	46
New York Journal of Commerce	2
The Engineering and Mining Journal	5
The Canadian Mining Journal	3
The Canada Lumberman	13
The Maritime Merchant	11
The Trade Bulletin	11
The Grain Growers' Guide	8
The Toronto Globe	36
The Gazette, Montreal	5
The Canadian Farm	3
The Weekly Sun, Toronto	1
The Northwestern Miller	6
Manitoba Free Press	5
American Silk Journal	2
Le Moniteur De Commerce	6
The Pulp and Paper Magazine	5
The Canadian Pharmaceutical Journal	6

THE GLASS SITUATION

According to Patton's Monthly, published by the Pittsburgh Plate Glass Co., window glass conditions have strengthened materially during the past month, and both manufacturers and jobbers have experienced an increase in demand. The prospects look bright for a comparatively heavy movement of glass during the balance of the year. Factory stocks have been reduced to nearly a minimum point, and consist mainly of the less popular sizes and qualities. No glass is being turned out from any of the hand operated factories, and but few factories are making glass by the machine process.

The wage committees representing the manufacturers and skilled workers have conferred but without reaching any agreement. It seems, from demands made by the workmen, that no reduction in cost of production of any consequence is likely to be granted. Present indications are that no general resumption of operations will take place until the middle of November, and in the meantime there is going to be a marked shortage of the sizes and qualities generally in demand for fall trade.

Conditions have been reflected in the jobbing centres by an increase in the demand, and in the higher prices prevailing. It is expected that the demand during the next sixty days will be very brisk, and this will no doubt result in still higher prices.



WHOLESALE PRICES, 1914 173

WHOLESALE PRICES, CANADA, 1914.—X. BUILDING MATERIALS. (b) MISCELLANEOUS BUILDING MATERIALS. (Concluded.)

WIRE CLOTH, Painted Screen.

Price per 100 sq. ft. at Toronto, in the opening week of each month, 1914; quotations from Hardware and Metal.

Average price 1890–1899—1.758.

ATLANTIC CITY CONVENTION

(Continued from page 29.)

and. That meant seven hundred thousand more people to house, to feed, to clothe, with the consequent increased demand for the things which go to house, to feed and to clothe. Since August, 1914, the additions to our population have been practically nothing, other than those from natural increase and that is not what it used to be. What effect will this cutting off of immigration have on business? Will it be for good or ill? I am not talking or thinking of remote consequences, social or political, but merely of its immediate effect on business.

Country Should be Ready for All Emergencies

"We are face to face with new taxation in some form and business is always particularly sensitive to that possibility, and usually moves cautiously until it knows what the added burdens are to be and how they will be adjusted. The war has so reduced our imports that our customs revenue is far below our needs. Nevertheless, the call for increased, perhaps for greatly increased, expenditure is strong. The last fifteen months have taught that the sword cannot be beaten into the plough-share and the spear into the pruning-hook, unless the lamb is entirely willing to lie down inside the lion. Many, probably most, of our people feel that we should be better prepared to defend ourselves against attacks. The business of getting ready to fight is, however, costly everywhere, and in the past has been, in proportion to what we have gotten for it, far more costly for us than for anybody else. Almost certainly we will have to face increased Federal taxation. Just what form it will take, we do not yet know. All or nearly all taxes, however, are burdens on business and tend to obstruct its flow and lessen its volume. Of course, some are far more burdensome than others, and may have far less incidental and compensatory advantages. Nevertheless, speaking for myself alone, for I have no right in such a matter to assume to speak for others, I wish to say as emphatically as I can, that I believe we should put this country in a condition in which it can defend itself, no matter how sudden and unexpected the attack upon it may be.

What Will Happen After War?

"What will happen, when, after having adjusted ourselves to war conditions, peace comes? Earnestly as it is to be longed for, devoutly as it is to be prayed for, it will have its own problems. To some lines of business it will bring shocks, dislocations, losses. Some of the things which our factories are now working night and day to produce will then not be needed at all, or if needed, in greatly diminished quantities. Perhaps many manufacturers have been able to protect themselves by the terms of their contracts and the prices which they have received from their war orders, against any serious injury from such losses. It is highly probable also, that when hostilities cease there will be instant demand from Europe for some things immediately needed to begin the work of repairing the damage done. Nevertheless, we cannot turn from one kind of production to another without a good deal of friction and lost motion. Such changes always cost the wage earners something. They cannot all transfer themselves overnight and without being the poorer, from one kind of work to another. Such immediate consequences of the return of peace can be accepted as so highly probable as for practical purposes to be counted among the certainties."

The President's address was followed by the reading of the minutes of the previous meeting, and the reports were then rendered by the following committees: Auditing, executive, membership, entertainment and promotion, as well as the annual report of Secretary-Treasurer E. D. Mitchell.

S. S. Brill, special agent of the Department of Commerce, delivered an interesting address on conditions in South America, the opportunities for hardware business there, and what must be done to secure a strong foothold in that country.

At the Thursday forenoon session, D. Fletcher Barber, of Boston, president of the National Retail Hardware Association, delivered an address on the problems of the manufacturer and retailer of hardware, and the ways in which they can best serve each other. The address in part follows:—"I accepted your kind invitation to meet you in this place amid these agreeable surroundings, and to say something to you as representing the National Retail Hardware Association, with its nearly 15,000 members, because I wish to express in a personal way our appreciation of the real interest you as manufacturers have always taken in the discussion of problems that concern the retail hardware merchant. This, I believe, too, is as it should be, for while a very large part of your product must and does pass through the hands of the jobber, yet the retailer is, I believe, the most important link in the chain of distribution. He is the man who comes in contact with the consumer—the final distributor of your product—your agent in the thousands of communities in which your goods are sold—the man upon whom you must rely to create a demand for and supply your goods.

"The retailer's problems are real and his difficulties great. How can the thousands of small dealers buy goods at a price that will enable them to compete with their large retailer competitors, is a very great and grave problem, worthy of your most earnest and careful consideration.

"Trade conditions have materially changed within a few years, and to-day more than ever before the retailer depends upon the manufacturer to protect his interest and his profit in every fair and lawful way.

"It is our duty and desire to serve the public in our capacity as retailers of hardware to the best of our ability, and at the least expense to consumers. We cannot do this unless we are able to sell at approximately the same prices quoted by large retailers.

"In speaking of large retailers here, I mean the mail order houses, for they are nothing in the world but retail merchants.

"It is acknowledged that the lowest printed price eventually becomes the established retail price of any merchandise, and it has always seemed to us unjust that, while it is conceded that the retail hardware dealers of the country sell 90 per cent. of the total volume of hardware sold, that the 10 per cent. passing through the hands of mail order houses should regulate or govern the price of the merchandise sold by the 90 per cent.

"This is a large problem, and we believe it is great enough to demand the concentrated thought of manufacturers, jobbers and retailers.

"Our organization is trying persistently to bring the retailer up to a higher standard, and is spending a great deal of thought and money for this purpose. To accomplish this it is sometimes necessary to create a very strong sentiment on the particular subject under discussion. It is possible that in doing this, we may reveal conditions that are discreditable to the membership of our organization, and possibly to that of the jobbers also, but it is the condition that has been revealed by the facts presented and not a theory that has been stated that might or might not exist."

Entertainment Features

The Entertainment Committee, under the leadership of David Halstead, of the Delta File Works, Philadelphia, was the recipient of many compliments and felicitations that were showered upon the members of the committee for the splendid manner in which everything had been planned for the pleasure and entertainment of the delegates, their ladies and other guests.

The entertainment started in full swing Tuesday evening with an informal reception in the Blenheim ball room, followed by dancing, and practically all who had arrived at that time enjoyed

(Continued on page 39.)

Sheet Metal Workers' Course

A READER of Hardware and Metal recently wrote in asking how he might, with accuracy develop a pattern for a horse trough with semi-circular ends. There are no doubt many readers who have had the same difficulty. In the accompanying article, and illustration, I will show how any pattern for this type of trough end may be developed.

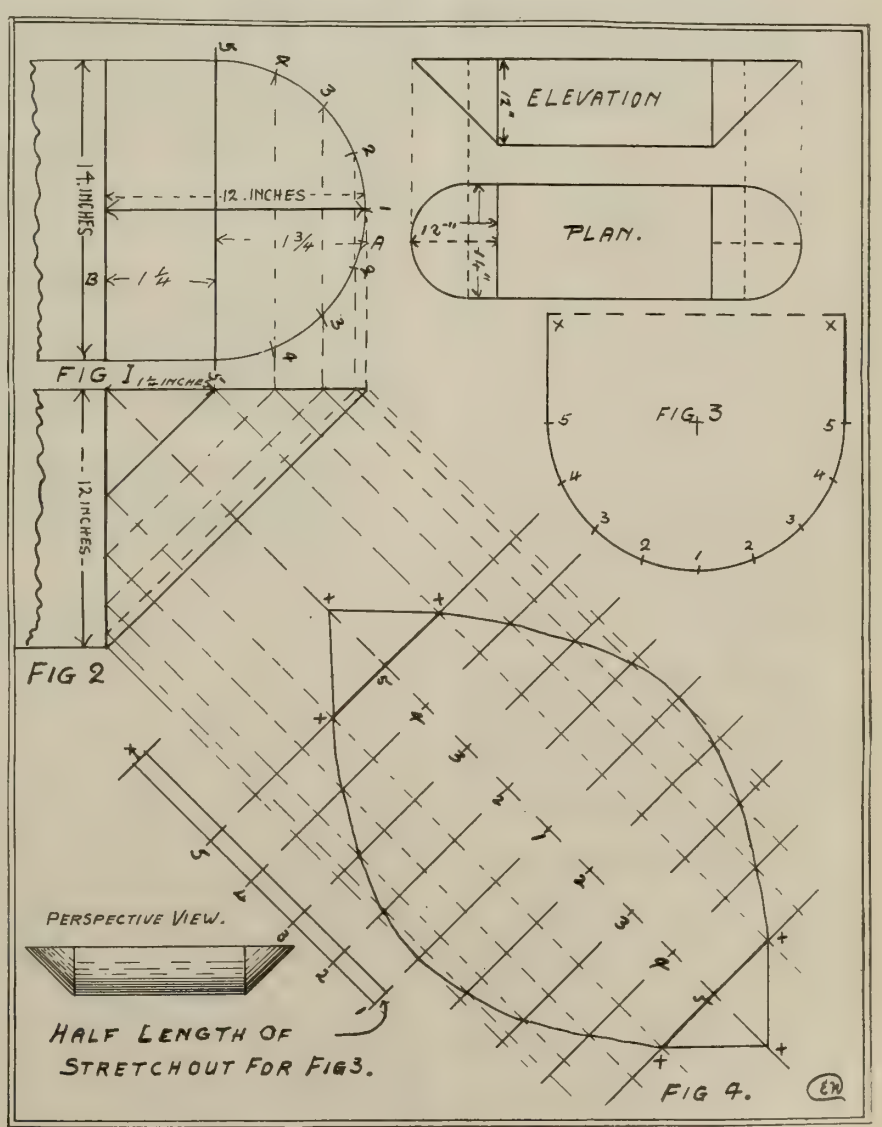
The first step is to draw the elevation as shown in Fig. 2. The next step is to determine the exact shape and size of the end. The original drawing was made quarter size. It will be seen that our inquirer wants to develop an end for a trough 14 inches wide and 12 inches deep. The elevation, Fig. 2, does not give any idea of what the width of the trough is. Neither does it give the radius of the circle.

However, the width is to be shown as quarter size, thus a half circle will be 3½ diameter, and 1¾ from centre to A, and 1¼ from centre to B. These two measurements make up a total of three inches, which is one-quarter the depth as well as length of end.

Having drawn the half circle Fig. 1, it must now be divided off into eight equal parts as shown at 5, 4, 3, 2, 1, 2, 3, 4, 5. It will be seen that these figures take up the entire half circle, being the quarter size of width which is necessary, viz.; 14 inches (full size.) Now extend from centre line to line as shown at B, 1¼ inches. This makes up the plan of end. Next step to take will be to carry dotted lines down from points 1, 2, 3, etc., to the top line on Fig. 2, until 1, 2, 3, 4, 5. etc., is completed. Now carry lines at 45 degrees to vertical line on Fig. 2, and draw dotted lines at 45 degrees from both the horizontal as well as the vertical line of Fig. 2, from points developed from the half circle. Use the centre dotted line for a stretchout line and transfer the measurements 1, 2, 3, 4, 5 and repeat to this centre line. Now cross these dotted lines at points 1, 2, 3, etc., beginning at 1 in the centre until 5 is reached. Then place the compass point at x x, and open up 1¼ inches. Now join x, x, on stretchout line at 5 to whatever point this last measurement is. Having completed both the dotted and solid lines 1, 2, 3, 4, 5, etc., Fig. 4, proceed to finish the pattern by connecting each intersection as shown by the two curves, and the pattern is completed with the exception of allowance for seams and edges.

The chief point in this problem is the difference between the width and depth, but suppose this trough had been the same width as depth then the only difference there would be in the two patterns would be that the solid line at 5, xx, would have come to a point. It will be noted when this pattern is developed the trough is straight from point 5 as shown in Fig. 3. The small plan and elevation shown on top right corner are the sketches submitted.

Halifax, N.S.—The death occurred here recently of William J. Wallace, aged 82 years. Mr. Wallace in his early years was engaged in the tinsmithing establishment of De Chezean & Crowe, and later engaged in the hardware and crockery business, with P. A. Balcom, under the name of Wallace & Balcom.



THE JUNIOR CLERK'S PAGE

Thou Shalt Not Steal--Time

By A. F. Sheldon in the Business Philisopher

MOSES the mighty arose in his might and said unto all Israel, "Thou shalt not" do certain things.

Moses was one of the most efficient efficiency engineers of his time.

Many of his commandments have been embodied into man-made laws and severe penalties attached for the violation of them.

Among the rest of the God-made laws, which Moses harnessed into verbal expression was the one which reads: "THOU SHALT NOT STEAL."

Moses did not specify Time as one of the things that we shall not steal.

I wish he had.

Had he included it as well as oxen and asses and things like that, then legislators might have embodied his commandment into the man-made law, thus making it a crime for human asses to steal time.

As it is to-day, if a shop girl is caught stealing a nickel's worth of ribbon she will lose her job and possibly be sent to jail, but she may steal dollars' worth of time and still hold her job, for some time at least, and go scot-free.

The man in the factory, if caught stealing a bucket of coal or any other of the raw material of the factory, will pay the penalty mighty quickly but he may steal ten times the value of the coal or the raw material and get away with it.

As a matter of fact God made many laws which His advance agents like Moses either never spoke or wrote about or else they have been lost in the shuffle of time, translation, etc.

One of them is, "THOU SHALT NOT STEAL TIME."

True there is no man-made law against it.

No one can send you to jail if you do.

But if you do you will violate a natural law and you will pay the penalty.

Tell me, now, did you ever know a gum-chewing-clock-watcher or hold-back-time-thief to climb very high on the ladder of success?

The basic reason why those who steal time do not climb is because they are thieves.

Thieves cannot build the bed rock of Satisfaction and the Confidence foundation necessary for permanent and profitable relationships.

It is true that anyone who steals time is a thief.

Time is money, and therefore he who steals time steals money.

The penalty of the time thief is industrial slavery.

He becomes a galley slave, bound by the chains of impecuniosity, which literally translated means being "hard up."

The time thief does not have to wait to die to go to hell.

It begins to come to him in the here and now.

He suffers the hell of lack of employment and the lack of promotion when he does have a job.

He suffers the hell fire of getting "fired" every little while.

He mistakes the just penalty of the violation of natural law, for "hard luck" and then proceeds to whine about it.

In his ignorance of the law of service he tries to get the heat of reward without building the fire of service, and then bewails his fate as he shivers in the cold of adverse conditions.

Time, time, my boy, and the proper utilization of it, is a necessary element for the building of a good big fire of service.

Your employer has bought your time during working hours.

Every moment of it which you waste or do not utilize to the best possible advantage for him who owns that time is literally stolen.

You are taking something which does not belong to you. You are taking something which has been paid for by somebody else.

You can no more build the fire of service and generate a good big heat of reward without the wise use of your time in the interest of your employer than you can live without nourishment.

Yes, I say it again, steal time if you want to, Moses did not specify it as one of the things "Thou shalt not steal," and there is no man-made law against it, but when you do steal time, do it with your eyes wide open to the fact that you are violating a natural law and must pay the penalty of getting cold.

If unconsciously, you have been a kleptomaniac of time, try this as a remedy:

"LOST! SOMEWHERE BETWEEN SUNRISE AND SUNSET, TWO GOLDEN HOURS, EACH SET WITH SIXTY DIAMOND MINUTES; NO REWARD IS OFFERED FOR THEY ARE GONE FOREVER."

Millions of people are stealing time from their employers and worse than wasting it, who have never even been conscious of their guilt.

Think it over and see if you have been guilty of this crime without knowing it. If so, mentally masticate the above mental morsel, handed down to us by some wise man. Commit it to memory. Say it over and over to yourself every little while. It is a good mental manna.

* * *

At the same time that Moses arose in his might and said, "Thou shalt not steal," he also said, "Thou shalt not kill;" in fact he said that first, and then in the same speech added, "Neither shalt thou steal."

Rightfully he put the crime of killing ahead of the crime of stealing, in order of their importance.

Could he come to us to-day and take a part in modern life, carefully studying the tendency of the times, I believe that he would add another word to each of these injunctions and that among the other commandments which he would give us, as coming from God, Himself, there would be one which would read:

Thou Shalt Not Kill Time

All men know it is contrary to man-made law as well as to Divine Law, to kill their fellow men—to murder. To take human life except in self-defence, is a universally recognized crime.

Sometime it will be a recognized crime to kill time. Stealing time and killing time are about the same thing.

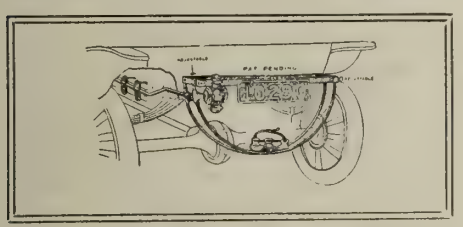
(Continued on page 46.)

NEW HARDWARE GOODS

OFFERED TO CANADIAN HARDWAREMEN

FOUR-IN-ONE REAR TIRE HOLDER

Crescent Manufacturing Co., 129 Reade street, New York, N.Y., offers to the trade a new rear tire holder for Ford cars. The holder is adjustable, and is made to carry one or two tires of the following sizes: regular size 3-inch tires; regular size 3½-inch tires; inflated demountable rim size 3-inch tires; inflated

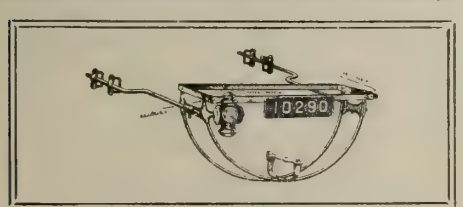


4-in-1 rear tire holder attached to car.

demountable rim size 3½-inch tires. The holder is equipped with lamp bracket and license holder bracket. The holder is strongly constructed of steel tubing and malleable fittings to hold one or two tires from 30 x 3 or 30 x 3½ inches, either plain or demountable rims. The holders are finished in triple coated black japan; all complete, ready to be adjusted to all models of Ford autos.

The carrier is equipped with either a double tire lock or with a double holder bracket with strap. The half-round cradle or frame work is so arranged that the parts against which the surfaces of the tires rest, will not collect water, thus eliminating one of the principal sources of tire and tire cover deterioration. The cross bar is adjustable so that same can be adjusted to secure one or two tires firmly in place, as shown by one of the accompanying illustrations.

The tire carrier is fastened securely and quickly to the rear of car in such a manner that no machine work or any extra bolts of any kind are necessary.



New Crescent 4-in-1 rear tire holder.

The arms supporting the carrier are clamped to the side channels of the frame, and are simple, strong, and effective. The carrier itself can be adjusted so as to bring the tires in required distance from the body of the car.

With this set is furnished an exhaust shield, which is fastened to the end of exhaust pipe and which protects tires from the exhaust heat, smoke and oil.

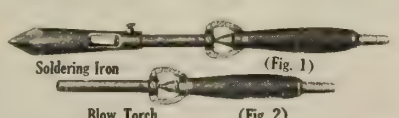
The company has also added to their line of bumpers, a diamond shape bumper. With all orders for one dozen assorted bumpers an iron display stand is supplied free of charge.

HORIZONTAL DOOR FIXTURES

Richards-Wilcox Canadian Company, Ltd., London, Ont., has produced Richards-Wilcox No. 40, horizontal folding door fixtures. The fixtures are for a door made in two leaves, hinged at top and in centre. By means of proper counterbalance weights and chain hoist, the door moves easily and quickly in either direction. This type of door is frequently used on outside of wall, with the mechanism inside the building, forming a canopy over the door way of warehouse. Blue prints, showing application to any special conditions will be furnished upon request.

SOLDERING IRON AND BLOW TORCH

The Up-to-Date Mfg. Co., Lytton Building, 14 East Jackson boulevard, Chicago, Ill., offers to the trade the "Autocrat" convertible soldering iron



Autocrat soldering iron and blow torch.

and blow torch, which uses gas as fuel. The makers state that the tool is automatic and requires no pump attachment or furnace. The heat is applied directly to the inner base of the soldering tip and does not come in contact with the working surface, thereby insuring a clean iron, long life and a saving in time. The soldering iron remains hot at all times when in use. The makers state that economy is one of the features of the tool, and that it can be used for ten consecutive hours per day at a fuel cost of approximately ¼ of a cent per hour. The soldering tip is made substantially in one piece. There are no screws, rivets or catch-pins in its construction.

The universal construction of the soldering copper permits of its adaptation to light and fine and also heavy work with the same tip. The "Autocrat" is simple in construction, containing less than a dozen parts in all, and there is nothing about it to get out of order. All parts are standard, and are easily replaced in case of loss.

With the soldering tip removed the tool is converted into a blow torch for all purposes. When lighted it emits a steady blue flame of intense heat, the force being supplied by the gas, assisted by the introduction of a special air-mixing system and regulated through the air-tight burner. The gas can be turned off entirely at this point or regulated at the will of the operator.

The blow torch is imediately convertible into a soldering tool for any purpose by simply attaching the soldering tip to the blow tube with the set screw provided for that purpose.

The accompanying illustrations show views of the soldering iron and blow torch.

ALFALFA BELTING

Caverhill, Learmont & Co., Montreal, Que., have taken the agency for Eastern Canada for alfalfa belting made by the Burrell Belting Co., Chicago, Ill. Alfalfa belting is said to be a composition belting particularly suitable for agricultural purposes, driving traction engines, or plants doing light manufacturing work. The belting is said to be considerably cheaper than leather belting.

GOLD MEDAL OF HONOR

The Stanley Works, New Britain, Conn., have been advised that Stanley butts, hinges, and other wrought steel products have received the highest award, Gold Medal of Honor, at the Panama Pacific International Exposition. Stanley products have received many awards, the first of which the Medal of Honor, was received from the American Institute in 1855, 60 years ago.

T. S. Simms & Co. Issue Catalogue

T. S. Simms & Co., brush manufacturers, St. John, N.B., have issued a new catalogue featuring the company's extensive line of brushes. The catalogue, which is now being distributed to retailers is larger than any previously issued. The front cover shows a reproduction of the new $285,000 plant where Simms' brushes are made at Suspension Bridge road, St. John, N.B.

EVENTS IN THE TRADE

Hardwareman Married

Weyburn, Sask.—J. A. Hewitt, of the Fraser & Enticnap Hardware Co., was married at Winnipeg recently to Miss Mary Johnston, Toronto.

Fire Losses

Cadillac, Sask.—The hardware store of J. A. McGillvray & Co., was recently destroyed by fire, caused by a clerk falling and breaking a lighted lantern near some excelsior.

Addition to Plant

Toronto, Ont.—The McFarlane Ladder Works have commenced the erection of an addition to their factory at 160 River street. The addition will add 25 per cent. to their floor space.

Joins the Colors

Hamilton, Ont.—W. W. Main, Jr., formerly with Wood, Vallance & Co., wholesale hardware merchants, has enlisted with the machine gun battery recently formed in Hamilton.

Firms Registered

Ste. Tite, Que.—Canadian Specialty Co., manufacturers cutlery, Phillippe Kent registered.

Drummondville, Que.—Canada Iron Foundries has registered.

Montreal, Que.—S. F. Bowser & Co., Inc., have registered.

Montreal, Que.—Greene Cut Glass Mfg. Co. has registered.

Business Changes

Winnipeg, Man.—E. G. Hook, hardware, has been succeeded by Weston Hardware Co.

Prelate, Sask.—Langford & Bolster, hardware, have been succeeded by R. A. Langford.

Lanigan, Sask.—Roycroft & McGregor, hardware, have been succeeded by Moritz & Clements.

Wilmington, Del.—The property and business of E. I. du Pont de Nemours Powder Co., of New Jersey, has been sold and transferred to E. I. du Pont de Nemours & Co., of Delaware, a corporation organized for the purpose of taking over and carrying on the business.

The new company assumes all liabilities of the old company (except capital stock and funded debts) and will carry out all contracts of the old company, there being no change in the personnel of the management, operations or methods of handling the business. It will issue capital stock to the amount of $120,000,000.

E. I. du Pont de Nemours & Company the new corporation, bears the name of the original Delawara concern established 1802 by E. I. du Pont de Nemours. The return to the original name is a tribute to the founder and emphasizes the long establishment of the business.

The incorporation was made in Delaware because Delaware was where the business originated and the main offices are located in Wilmington.

Dominion Incorporations

Universal Appliance Manufacturing Company, capitalized at $150,000, head office Toronto, to manufacture and deal in automobiles, motor cycles, bicycles, etc.

Canadian Tygard Engine Co., capitalized at $3,000,000, head office Toronto, to manufacture and deal in gas and gasoline engines, machinery and hardware specialties, etc.

Standard Steel Company, capitalized at $200,000, head office Montreal, to manufacture and deal in corrugated steel pipes, culverts, etc.

O'Brien Munitions, capitalized at $2,000,000, head office Renfrew, to carry on the business of mechanical, electrical and chemical engineers, to acquire, maintain and carry on smelters, refineries, chemical works, etc., and to sell and deal in munitions.

Personals

A. R. Payne recently joined the sales staff of Wood, Vallance & Co., of Hamilton. Mr. Payne will cover territory in Central Ontario.

R. J. Moore, of Moore Bros., hardware merchants, of Uxbridge, Ont., left recently for a business trip through the Western provinces.

J. M. Lynch, buyer for Miller-Morse Hardware Co., Winnipeg, left Saturday last for a few days' trip to Toronto, Detroit and other eastern points.

J. H. Conover, manager of the Toronto branch of the Martin-Senour Co., has returned from an extended business trip through the Eastern provinces.

The marriage took place at Toronto recently of B. H. Bramble to Miss Mabel Fuller. Mr. Bramble is advertising manager of the Goodyear Tire & Rubber Co., Toronto. On the eve of his marriage, a number of Mr. Bramble's friends tendered him a dinner at the Albany Club.

Arthur Boyce, whose name will be familiar to many readers of Hardware and Metal as a member of the Wanderer Hockey Team, has been appointed sales manager for the Duncan Electrical Co. of Montreal. Mr. Boyce expects shortly to make a trip through to Vancouver, calling on the jobbing trade at chief points.

Addition to Plant

Windsor, Ont.—The National Spring & Wire Company of this place is contemplating the erection of a second plant. It is expected that the new building will be adjacent to the present one. The National Spring & Wire Company manufacture cushion springs, etc., for automobiles and furniture.

Plant Nears Completion

Windsor, Ont.—The Windsor plant of the Clark Metal Last Company is nearing completion and will be ready for occupation on November 1st. This building is the first Canadian branch of the concern, which has its headquarters in South Bend, Ind. It is expected that about thirty-five men will be employed making aluminum articles when operations commence.

Schultz Bros. Catalogue

The Schultz Brothers Company, Brantford, Ont., have issued a 32-page catalogue illustrating and describing the various products made by the company. Among the many articles featured in the catalogue are games, novelties and kitchen utilities, including shoo-fly rockers, teddy-bear rockers, parlor billiards, parlor pool, crokinole, card tables, triangles, lawn swings and seats, verandah seats, washing machines, clothes bars, ironing boards, sleeve boards, pastry boards, kitchen tables, bread boards, kitchen and medicine cabinets, stepladder, chairs and wheelbarrows. Copies will be mailed on request.

HOW IT HAPPENED

"I see that the Old Fogy has failed in business," remarked the Grouch. "How did it happen?"

"Too much advertising," replied the Wise Guy.

"But he never advertised," protested the Grouch.

"No, but his competitors did," replied the Wise Guy.—Exchange.

Hardware Letter Box

Horse Blankets

J. B. Crawford, Dutton, Ont.—Kindly advise us through Hardware and Metal who makes horse blankets in Ontario.

Horse blankets are made by the Burlington-Windsor Blanket Co., 793 King street west, Toronto; Smart-Woods, Ltd., Ottawa; J. J. Turner & Sons, Peterborough, Ont.; Brook Woolen Co., Simcoe, Ont.; Slingsby Mfg. Co., Brantford, Ont.; The Glen Woolen Mills, Glen William, Ont.—Editor.

Pitner Gasoline System

Geo. A. Poirier, 599 Wellington street, Montreal, Que.—Kindly give address of the Pitner Gasoline Lighting Co.

Pitner Gasoline Lighting Co. is located at 52 Colborne street, Toronto, Ont.—Ed.

Trade Inquiries

The Department of Trade and Commerce has received the following inquiries relating to Canadian trade. Addresses may be secured from the Department, or from the Editor, Hardware and Metal, Toronto, Canada. Please quote reference number when requesting addresses.

1108. **South African agency.**—A South African manufacturing firm with an established connection in small and large centres, is prepared to take up agencies on commission and invites correspondence from Canadian manufacturers of any line which can be sold from catalogue or price lists.

1109. **Iron sheets, corrugated and galvanized.**—A Bombay firm desires quotations for considerable quantities of sheets varying from 5 feet to 12 feet by 2 feet 3 inches, weighing about 3 pounds per foot packed in wood—5 cwts. per case or as usual and convenient in Canada. Quotations for the sheets should accompany full specifications of same if possible. Quotations are desired c.i.f. Bombay harbor. This firm is also interested in galvanized water buckets.

1115. **Spruce, paints, malt and brewers' supplies** — A Havana commission merchant is open to represent Canadian exporters of the above. Bank references offered.

1116. **Machinery for sugar mills.**—A firm of commission merchants in Havana desires to correspond with Canadian manufacturers of machinery for sugar mills. Bank references.

1119. **Broom handles, washboards, pegs, etc.**—A London firm of general merchants dealing in woodenware, asks to be placed in touch with Canadian manufacturers of broom handles, washboards, pegs and similar lines.

1120. **Whisk brooms and brushes.**—A firm in England asks to be placed in communication with Canadian manufacturers of whisk brooms and brushes.

ATLANTIC CITY CONVENTION

(Continued from page 34.)

several hours of visiting and "tripping the light fantastic."

Wednesday afternoon, at 3.30, the ladies took part in a card party at the Blenheim East Solarium, which was greatly enjoyed by the devotees of the enameled paste boards. Beautiful and valuable prizes were awarded to the winners.

In the evening there was a theatre party at Nixon's Apollo Theatre, where the entire lower floor and all boxes had been reserved. The play was entitled "Wall Street Gets Potash and Perlmutter," and is a sequel to the famous "Potash and Perlmutter" which has enjoyed such a marvellous run in many of the large cities. To say that the audience had a good time is putting it mildly, for there was hardly a moment when the house was not ringing with laughter at the funny situations.

Thursday afternoon a roller chair parade started from the Marlborough-Blenheim at 3.30, in which a large number of the ladies took part. As is well known, the roller chair is an Atlantic City institution, and during the entire convention free chair rides were the rule. All any of the ladies had to do was to show their badge and say "Roller Chair," and a roller chair with attendant was provided.

In the evening the crowning feature of the entertainment was given, in the shape of a ball at the Blenheim, and for many hours the ladies and gentlemen enjoyed the beautiful music and took part in the dancing or watched the "experts" execute the newest fancy steps.

Friday evening there was again informal dancing in the Blenheim ball room.

It is only just to say that the committee worked very hard, but the many expressions of appreciation of their splendid efforts must have compensated them in full measure.

The committee consisted of the following: David Halstead, chairman; Arthur B. Birge, of Ames Shovel and Tool Company, St. Louis, Missouri; Frank G. Drew, of Winchester Repeating Arms Company, New Haven, Connecticut; E. C. Griswold, Philadelphia, of Corbin Cabinet Lock Company, New Britain, Connecticut, and George H. Harper, Baltimore, of the National Enameling and Stamping Company, New York.

Canadian Present

Canadians present at the convention were as follows: James Hardy, Toronto; D. F. Griffith, B. Greening Wire Co., Hamilton; T. B. Williamson, H. S. Howland, Sons & Co., Toronto; A. M. Smith, McClary Mfg. Co., London, Ont.; Albert Gilverson, Rice, Lewis & Son, Toronto; Walter Dorken, Dorken Bros., Montreal; Robt. D. Starke, Starke, Seybold & Co., Montreal; S. H. Alexander, Wood, Vallance & Co.; H. G. Wright, E. T. Wright Co., Hamilton; Hardware and Metal was represented by R. B. Huestes, New York, and J. G. Lorriman, Toronto.

CANADA'S GRAIN CROPS

(Continued from page 26.)

tario, chiefly sprouting in stook through the excessive rains during August. These deductions do not represent a total loss, as the sprouted grain will be used for feeding. They amount on the average to 11 per cent. of the total crops for wheat, 9 per cent. for oats, 8.5 per cent. for peas, and 6 per cent. for beans.

Correspondents were asked to report on the quality of the grain crops at the time of harvest, as measured against a standard of 100 representing grain well headed, well filled, well saved and unaffected to any appreciable extent by frost, rust, smut, etc. The average results for the whole of Canada are as follows: Wheat, oats, barley, rye, and mixed grains from 90 to 93; peas, beans, buckwheat, flax and corn for husking from 79 to 84. The quality of spring wheat is exceptionally high in the Northwest Provinces, being 93 in Manitoba, 96 in Saskatchewan and 97 in Alberta. Last year the corresponding figures for Canada were below 80 in nearly all cases and even in the good season of 1913 they were not so high as they are this year.

Why a hardware merchant at Dundalk, Ont., is using newspaper space, 2 col. wide by 8 inches deep to feature in the month of October, an advertisement which reads as follows:—

"FLIES COMING

"Get your screen doors and windows on and keep them out. Every one kept out means thousands in a month and will save you dollars a year from disease and waste through the nasty flies. We have a good assortment of screen doors and windows on hand from $1 up to $2 each."

WEEKLY HARDWARE MARKET REPORTS

STATEMENTS FROM BUYING CENTRES

The Markets at a Glance

Business in country districts continues on a very satisfactory basis. In the city there has been very little change from last week. There is a steady demand for supplies used in manufacturing munitions. The steel plants are still rushed to capacity. The metal markets are fairly steady, with weakness in tin and lead. Despite the unfavorable weather, the presence of money in the country districts is helping the demand for stoves and furnaces. There is, however, a slackness in the demand for late fall and early winter lines, due to the recent mild weather. The fine weather has also prolonged the outdoor painting season and a fair volume of trade is being done. There is a tendency, however, on the part of retailers, to order only for immediate needs, owing to the uncertainty regarding future prices on paint, which it is claimed will be lower than prevailing prices. Some definite announcement regarding future prices will probably be made in about a week's time. Owing to advances in steel, etc., it is expected that steel butts and a number of other lines will advance in price in the near future. Linseed oil and turpentine have advanced again this week. A number of other price changes have also been reported from buying centres.

MONTREAL

MONTREAL, Oct. 21.—The volume of business in country districts continues very satisfactory; the movement represents sorting in general staples of both shelf and heavy lines and there would undoubtedly be a brisker demand for fall and winter goods with more seasonable weather prevailing. In the city there is little or no improvement except in some special lines where war industries have created a demand. Bulky goods are moving well to districts where supplies are being secured prior to the close of navigation. Stoves and furnaces are moving out in a fairly satisfactory way despite the warm weather. The paint trade is dragging on account of a slack demand for mixed lines, lower prices being expected before another week.

Price changes are not very important, being rather in the nature of readjustments. Tin and lead are slightly lower, and solder is declining, but otherwise metals are generally steady. Galvanized sheets seem likely to go lower and galvanized Canada plates are off 25c. Linseed oil and turpentine are tending to higher levels.

Tin.—The weaker tone in the local tin situation, referred to last week, has had the effect of reducing the local quotation 1c, the figures now being 40c-41c. At the same time there has recently been a little firmer tone in outside markets, New York and London evidently stimulating each other in a buying movement. It has been suggested that large spot stocks in New York are for London account and that it may have been sent for financing operations or because of chances of an export duty. This being the case, states The American Metal Market, inquiry and strength on this side would be made the most of by the London owners, one market thus influencing the other.

Spelter.—There is no change in the local quotations for spelter. The situation is firm at 19-20c, with New York reporting a scarcity of prompt and October metal. An increase in the spot demand might soon make itself evident, because most of the large producers are not looking for business before November. On next year's business the inquiry is dull, but the situation is not so unsettled as it was.

Lead.—There is a slightly easier tone to the local lead situation, quotations now being 6¼c to 6½c, which is ¼c off at the top. The American Trust is maintaining its price of 4½c, but there have been some reductions on spot. New York is being sustained by a good demand from Canada and inquiry from Europe which, with the high prices abroad, promises to bring about an increase in exports.

Copper.—Locally copper is steady at 21½c. New York on last reports indicated a slightly stronger tendency with prices fractionally higher than a week ago. London has recently showed advances which are attributed to continued decrease in the French and English stocks.

Antimony.—A nominal quotation of 35c for antimony is about the best indication of the market that can be given. New York recently has shown firmer prices for Chinese, Japanese and American, the quotations being 29½c to 30c, which is an advance of 1¼c over a week ago.

Aluminum.—Although there has been a slight decline in outside markets, 65c may still be regarded as a nominal quotation for this market for what little business is being done. New York quotes 55c, which is 1c off for the week, and states that there are buyers at 54c with some transactions going through at 54½c.

Solder.—The solder market is weaker with the result that there has been an improvement in the demand. The high prices which prevailed for some months had the effect of curtailing demand, but also had the result of reducing stocks in the hands of consumers and the trade to small proportions. Present quotations are:

Half-and-half	22 to 24c
Strictly	24 to 26c

Iron and Steel.—The market for iron and steel continues firm on the advances recorded a couple of weeks ago. Higher prices are also being made for hoop steel, the increase being about 35c all all round. The demand for steel of practically all kinds promises to continue and to make a strong market for some time. The base for bar iron continues at $2.20.

Copper Products. — Some readjustments have been made in the quotations for copper products on the advances which were announced last week. The schedule of prices is now as follows:

Bars, ½ to 2 in.	$30.50
Plain sheets, 14 oz., 14 x 28 in., 14 x 60 in.	31.25
Copper sheet, tinned, 14x60, 14 oz.	34.75
Copper sheet, planished, 14 x 60, base	41.25
Braziers' in sheets, 6 x 4 base	30.50

Galvanized Sheets.—Lower prices are to be expected on galvanized sheets, a reduction having been made this week in Canada plates. The market has been somewhat unsettled for these products for some time, and although there has been little price-cutting it has been re-

cognized that the situation is developing weakness. Galvanized Canada plates are now quoted as follows:

	Apollo	Crown	Gorbals
18 x 24 x 52	6.00	6.00	6.00
60	6.25	6.25	6.25
20 x 28 x 47	6.50	6.50	6.50
20 x 28 x 94	13.00	13.00	13.00

Black Sheets.—Although there has been an advance in the market for black sheets there is still a difference in prices as quoted by the members of the Association and independent dealers, which is largely explained by the fact that on many sizes the wholesale hardware dealers quote on smaller lots. The different quotations are:

	Ind.	Assoc.
10 gauge	$3.00	$2.75
12 gauge	3.00	2.80
14 gauge	2.85	2.60
16 gauge	2.85	2.55
18-20 gauge	2.85	2.60
22-24 gauge	2.85	2.70
26 gauge	2.95	2.75
28 gauge	3.00	2.80

Sheet Zinc.—The market for sheet zinc remains steady for the time being, but further changes are to be looked for. The present quotations are 20½c for casks and part casks 21c.

Lead Products.—Lead pipe and other lead products remain steady and there appears no indication of an early change in the quotations, which are as follows:

Lead pipe	$0.09½
Lead waste pipe	0.10½
Sheets, 3-lb sq. ft.	8.25
Sheets, 3½-lb. sq. ft.	8.00
Sheets, 4 to 6 lbs. sq. ft.	7.75

Cut sheets, ½c per lb. extra.
Cut sheets to size, ¾c per lb. extra.

Mechanics' Tools.—The manner in which the demand for mechanics' tools is being maintained is very satisfactory to the hardware trade and there is evidence that the manufacture of munitions is still on the spread. Delivery is being delayed for some lines.

Arms and Ammunition.—With the falling of the leaves and less sunshine, the duck hunters have been more active and, although the weather has been too summer-like for ideal sport, there has been a noticeable improvement in the already brisk demand for shells. The demand for guns grows smaller as the season advances.

Fencing.—Business is now being placed for spring fence and poultry netting business and the indications are that there will be another good season in these lines. Quotations follow:

	Per 100 lbs.
Barb	$3.00
No. 9 coil spring	3.00
No. 9 plain galv.	2.85
No. 12 plain galv.	3.00
No. 13 plain galv.	3.15
O and A, No. 10	2.61
O and A, No. 11	2.61
O and A, No. 12	2.75

Seasonable Lines.—With the last week of October approaching and the weather more like August than autumn, there has been a slackness for some winter goods. Skates and hockey sticks and other similar lines have had a fair call, but business should be much brisker when the weather breaks up.

Stoves and Furnaces.—Despite unfavorable weather the prevalence of money in the country districts is evidently helping the demand for stoves and there has been a recovery in this department during the week. Furnaces are also in steady and strong demand for country districts, where the people seem more inclined than ever to have city comforts. Business in town continues dull.

Utensils.—The presence of money in country districts is also having a favorable effect on the demand for utensils which come into the staple class. There have been no changes in this department for some time and there does not appear to be any in prospect for the immediate future.

TORONTO

TORONTO, Oct. 21.—Several important price changes have taken place during the past week.

Indications point to a return of better trade conditions and a distinctly optimistic tone exists in business circles. The record harvest means prosperity in the West; war orders are keeping many factories fully employed, the adverse trade balance has been eliminated and railroad earnings now show an increase. The steel trade is generally considered to be the barometer of industrial conditions, and in its present state of great activity gives reasonable grounds for hoping that the improvement in business now taking place is something more than temporary. The influx of large sums of money resulting from war orders cannot help but stimulate manufacturing, and with the improvement in Canadian fiscal conditions will lead to a marked industrial development in the country.

Developments in the shell industry are pending, and arrangements are being made for the manufacture of shells up to 12 in. calibre. The duties and responsibilities of the Shell Committee have increased to such an extent that a reconstitution of its personnel is being made to meet the demands of the situation. It is understood that the British Government have reserved large orders for shells for Canada, providing quick delivery can be made and at a fair price. A central ordnance factory for making big guns is under consideration; this branch of the industry will also come under the control of the Shell Committee.

Steel Market

The steel trade is in a very buoyant condition, and the mills are operating at capacity. The market is very strong, and prices on a number of steel products are advancing. Canadian mills are quoting iron and steel bars at 2.25c Toronto. Prices on wire are withdrawn pending a revision, which will be in an upward direction. Pittsburgh bars, plates and small shapes for Canadian business are quoted at 1.35c f.o.b. the mill, but are likely to be advanced again very shortly to 1.40c. The difficulty in obtaining quick delivery on steel products is illustrated by a Canadian buyer recently paying several dollars a ton premium for prompt delivery of structural material.

The placing of orders for larger shells which is anticipated, and the repeat orders for 18-pdr. shells in considerable quantity, indicates that the steel companies will be very busy for some time to come.

Pig Iron

The chief interest in the market is in steel making grades, with low-phosphorous iron still the feature. Canadian buyers have taken considerable tonnage from the States. Among these is the Canadian Steel Foundries, who have bought 7,000 tons recently and have inquired for 5,000 tons additional, the price being $25 at the furnaces. Foundry grades are quiet at unchanged prices.

Machine Tools

Machine tool dealers are anticipating a period of considerable activity in the orders for the larger calibre shells will be ready to be placed. A few tentative inquiries have already been received for large size lathes, but up to the present few orders have been given out. The great problem at present as regards new equipment is the question of delivery. Builders are in a sold-up condition and the supply of suitable second-hand tools is rapidly decreasing.

Supplies

The demand for machine shop and mill supplies continues good and prices are holding very firm. Prices of high-speed twist drills are withdrawn on account of the continued advance in high-speed steel. In regard to the latter, the situation shows no improvement and prices are away up; supplies in sufficiently large quantities are also still difficult to obtain. Prices of waste are very firm, but unchanged. Turpentine has advanced 1c, and is now quoted at 65c per gallon.

Metal Market

The metal market is dull, and there is little of interest to note. Tin and spelter

are lower, but aluminum has advanced. The copper market is steady as a result of good demand for war munitions, which shows no sign of abatement. The lead market is unchanged, but the position of this metal is a good one. There is still some scarcity in supplies of antimony, but the demand has not improved and quotations are stationary. Prices of solders are unchanged, but have a weak tendency, due to tin having declined. There is no change locally in the general situation. The general trend of business continues the same, metal for munitions constituting the principal demand.

Tin.—The market is quiet and lower, and comparatively little interest is being shown by consumers. The one influence dominating the tin market in New York is the expectation that the British Government will impose a 10 per cent. tax on its importation; there is as yet no official confirmation of any such intention. No large business is looked for until that question is settled, as consumers are content to wait. Tin has declined 1c locally and is quoted at 37c per pound.

Copper.—The market is very dull, but prices are holding firm. Buyers have fair stocks on hand, but are reaching a point where they will have to take on additional supplies. Producers are well stocked up, but are not inclined to offer any price concessions. Quotations are steady and unchanged at 19½c per pound.

Spelter.—The market for spot is weaker owing to the absence of interest on the part of consumers. Another influence lending weakness was a decline in the London market. Spelter has declined 1c locally, and is quoted at 17c per pound.

Lead.—The market is quiet and unchanged. It is reported that Canadian consumers have closed contracts for some good amounts of lead in addition to those recently placed. Quotations are firm at 6¼c per pound.

Antimony.—There is no change in the situation and the demand does not show much improvement. Quotations are unchanged at 35c per pound.

Aluminum.—Supplies are diminishing and the demand is increasing heavily, due to war orders. Quotations have reached a record level and are nominal at 60c per pound.

Rope.—A fair volume of business is being transacted by the local jobbers. Prices are unchanged and are firm at the figures shown in the current quotations.

Waste.—The demand for waste by manufacturers of ammunition and other war supplies continues good. Several large shipments have been made recently by local jobbers. The price of waste holds very firm, and no immediate change is expected.

Galvanized Sheets.—The situation in galvanized sheets is practically unchanged locally. The majority of jobbers are willing to sell at uniform prices, but until the price-cutting element is eliminated, no change in the present conditions is expected. Low prices that are being quoted in some quarters are being met by other firms, thus keeping the local market in a state of unsettledness. The prices shown in the current quotations are being quoted generally on the local markets.

Arms and Ammunition.—Although the weather is a little warm for big game shooting, the sale of metallics has shown considerable improvement during the past week. Loaded shells are still moving, and better business in all lines of shooting goods is expected when the weather becomes cooler.

Brushes.—The brush market is featureless, and prices are at the same levels, with the exception of a few lines which have been changed by some manufacturers to meet competition. The bulk of the business is being transacted in the medium and cheaper lines of paint brushes. This can be accounted for by the fact that more householders have taken upon themselves the painting and decorating of their homes, which in other years has usually been handed over to a painter.

Brooms.—Brooms are selling at fairly low prices, but it is expected that prices will go to still lower levels. With a fairly large broom corn crop and a smaller consumption on the part of housekeepers, who now have modern floors in their homes, and are using oil mops and hair brooms in place of the corn broom, it is expected that the price of corn brooms will decline. Price-cutting is very prevalent in some quarters, which also tends to make lower prices.

Fence Wire.—As predicted in last week's issue, an advance has gone into effect in the price of fence wire. At the present time it is hard to estimate the levels to which the price will go, but the last advance, which is an average of 25c per 100 lbs. on all lines, indicates the condition of the market. It is very probable that further advances will go into effect at an early date. The price of barb wire has advanced 30c per 100 lbs., while a similar advance is noted in the price of No. 9 coil spring. The following prices are now in effect among the local jobbers:

	Per 100 lbs.
Barb	$3.30
No. 9 coil spring	3.30
No. 9 plain galv.	3.00
No. 12 plain galv.	3.15
No. 13 plain galv.	3.30
O and A, No. 10	2.76
O and A, No. 11	2.82
O and A, No. 12	2.90

Cotton Twine.—Cotton wrapping twine in cones and balls has again advanced in price. Three-ply is now quoted at 23½c per lb. and 4-ply at 21c per lb.

Valves.—An adjustment has been made in the price of angle and check valves. The discount, which formerly was 50 per cent. off list, is now 45—5 per cent.

Cotton Rope.—A new basis for cotton rope has been made. Formerly the price was 23c per lb. for 3-16 inch and larger. The price is now as follows:

3-16 inch cotton rope..... 25c per lb.
¼ inch and larger cotton rope 23c per lb.

Furnace Scoops.—Furnace scoops have advanced in price. Regular D-handle furnace scoops are now being quoted by the local jobbers at $3.50 per doz., and long handle furnace scoops at $3.50 per doz. In each case the advance is 25c per doz. over the old price.

Jute Packing.—Prices of jute packing in coils have been revised, and are being quoted on the local market as follows:

Fine jute, per lb. 8¾c
Coarse sewer, per lb. 6½c

Old Rubber.—Dealers in old material are offering better prices for old rubber, and 6c to 6½c per lb. is now being paid for old rubber boots and overshoes. Old auto tires are bringing 4½c per lb.

Oakum.—Local jobbers have advanced the price of American oakum. United States Navy is now quoted at $10 per 100 lbs., and best at $10.75 per 100 lbs. Other prices are shown in the current quotations.

Cold-Rolled Shafting.—An advance in the price of cold-rolled shafting has gone into effect during the week. The former discount of 40 per cent. off list has been replaced by a new discount of 35 per cent.

Range Boilers Reduced.—A reduction in the price of range boilers is announced by local manufacturers. A reduction of 75c has gone into effect, making the local quotations as follows:

30-gal. standard (welded)...$5.75 each
30-gal. standard (riveted)... 6.00 „
30-gal. extra heavy ..... 8.25 „

Iron and Steel.—Further advances in the prices of iron and steel items are in effect. The chief item is that of high-speed tool steel. The shortage of tungsten used in the manufacture of high-speed tool steel is being felt, as practically all supplies came from Germany. This alone has resulted in a steady advance in the price of tool steel, while the unusual demand from manufacturers of ammunition has also been a great factor in bringing the price to the present high level. High-speed tool steel is to-day quoted at $1.50 per lb., while the price a year ago was 65c per lb. Other items that are affected in the recent change are bar iron, mild steel and tire steel. Ten cents per 100 lbs. is the amount of the increase. Other prices are shown in the current quotations.

LONDON

LONDON, Ont., Oct. 21.—A fair volume of business is being transacted by the local jobbers, especially on staple lines. Fall seasonable lines are moving well, but there has been a reaction in late fall and early winter goods, owing to the unusual warm weather. Orders for spring are being booked quite freely.

Linseed Oil

The price of linseed oil has again advanced. The shortage of flax seed is said to be the cause for recent advances. It is very probable that further advances will go into effect at an early date. The present prices are:

	Raw Per Gal.	Boiled Per Gal.
1 to 2 barrels	77c	80c
3 to 5 barrels	76c	79c
6 to 9 barrels	74c	77c

Turpentine

An advance is also announced in the price of turpentine. Reports from the Savannah markets show that the export of turpentine has increased considerably. The price, locally, has been advanced to meet this condition. Local quotations are as follows:

	Per Imp. Gal.
1 barrel lots	70c
2 to 4 barrels	69c
5 gal. lots	77c

Nails

No change in the price of nails has taken place, but the condition of the wire rod market makes a change in the price of all wire goods very probable. The following prices are in effect locally on

Wire nails .... ..$2.45 Per 100-lb. Base
Cut nails ..... 2.70 Per 100-lb. Base

White Lead

A fair volume of business is passing among local jobbers as a result of the recent reductions in the price of white lead. The price of $9.60 per 100 lbs. in ton lots is holding firm. For less than ton lots advance the price 30c per 100 lbs.

Fence Wire

Although no definite word has been received, it is expected among the local jobbers that the price of fence wire is due for another advance. The high prices quoted for wire rods are said to be going still higher. Present prices on fence wire are as follows:

	Per 100 lbs.
Barb	$3.20
No. 9 Galvanized	2.80
No. 12 Galvanized	2.95
No. 13 Galvanized	3.05
No. 9 Coil Spring	2.85
No. 10 O and A	2.76
No. 11 O and A	2.82
No. 12 O and A	2.90

Fence Staples

A fair demand for fence staples is felt from the country districts, and both bright and galvanized are selling well. Prices are firm at the following figures:

	Per 100 lbs.
Galv. Kegs	$3.70
Galv., 25-lb. Boxes	3.95
Bright Kegs	2.85
Bright, 25-lb. Boxes	3.10

Putty

The price of putty is still unchanged, and only a fair business is being transacted locally. The following figures are ruling on the local markets:

	Per 100 lbs.
Bladders, in Barrels	$3.25
Drums, 100-lb.	2.70
Drums, 25-lb.	2.80

Rope

Prices on rope are unchanged and are holding firm. Business on all lines of rope is very favorable. Quotations are as follows:

	Per lb. Base
Pure Manila	16 c
British Manila	13½c
African Hemp	13½c
Sisal	11½c

Seasonable Lines

A fair demand for all seasonable lines is in evidence and fairly good shipments have been made recently of ash-sifters, weather strip, coal oil stoves, horse blankets, etc. Lantern and lantern globes and other stable needs have received much attention recently.

Guns and Ammunition

Shot guns, rifles and ammunition, are moving freely, and better business is looked for when the cooler weather comes. Prices are fairly high, both on guns and ammunition, but the sport alluring still claims its usual recruits.

Steel Goods to Advance

With the general advance in the price of steel goods, an advance in the price of steel butts, etc., is expected. Nothing definite is known at the time of going to press in regard to the advance, but it seems very probable that an advance will take place before long.

WINNIPEG

WINNIPEG, Oct. 21.—Owing to the continued fine weather threshing operations have been resumed in Manitoba as well as in the other two prairie provinces, and a decided increase in the volume of business being done has been noticed. Reports which came to hand early in the season indicating an exceptionally large yield, are being exceeded, and it is to be hoped that the present rate of increase will be maintained as this will give all the merchants a chance to collect their accounts and have everything in exceptionally good shape financially by the first of the year.

It is no less interesting to note in last Saturday's paper that the world's record has been created for leading grain by the C. P. R. There were 2,033 cars loaded at their various stations and sidings throughout the West, and all indications would lead one to believe that the railways will handle the transportation problems much better than has ever been done previously.

These optimistic reports of big yields should not make the merchant willing to sit back and wait for the farmers to come in and pay their accounts. As indicated before, the farmers often forget their obligations and it is up to the retailer to impress on their minds that all outstanding accounts must be paid. This will work an influence for good, and will permit everyone to look forward to 1916 in a most optimistic frame of mind.

There are very few advances to record this week, but the latest news from the States of a new steel combine will probably have its influence in increasing prices for a long time to come. The new combine, if formed, will probably control everything in the United States in the way of iron and steel manufactures. There is no doubt that this combination in the face of the enormous demand now being experienced, will make advances in all prices, and the Canadian manufacturers will undoubtedly have to follow suit.

The jobbers in Winnipeg are experiencing a great deal of difficulty in making contracts for all wire and steel products for next year, and feel that it would be advisable for the retailers to specify for their needs for next year as early as possible.

Prices on wire nails and barbed wire have not been made for spring shipment, and it is doubtful if prices will be made before the 1st of January. The merchants placing their orders now will be protected on the first price issued and if this coming year follows the trend of last spring, there will be several advances made up until the first of May.

Sheet zinc and spelter markets are lower, and it is possible that this may affect prices on galvanizezd pails and tubs. It is not likely, however, that the reduction on spelter will affect the price of galvanized sheets to any extent on account of the abnormal advances in steel.

Turpentine has taken a drop during the week, and the price to-day is 72c in barrel lots.

A fairly good demand is being experienced for skates, hockey sticks and sleighs, but it is unlikely there will be a decided rush until colder weather sets in.

In speaking to the sales-manager of one of the large oil companies in the city,

(Continued on page 46.)

WEEKLY PAINT DEPARTMENT

Preparing for the Indoor Months

Paints and Brushes are Needed to Prepare the Home Interior for the Indoor Months—How One Firm Displays Brushes—Some of the Sellers

A NUMBER of retailers have hesitated of late to place heavy orders for paints, owing to the fact that they have been looking for a readjustment of prices, which if it takes place, will probably be announced very shortly.

Their action in this respect, however, should not affect their endeavors to push the sale of paints, for there is a ready sale for a good many lines of paint at this season of the year. The exceptionally fine weather which has prevailed, so far, during October, in many parts of Canada, has had a tendency to keep up the demand for ready-mixed paints for outside work. In some towns, where the retailers have given their paint department the publicity it deserves, there has been a bigger demand than usual for ready mixed paints. There is also a ready sale for inside finishes of various kinds at this season of the year. Wall finishes, floor finishes, linoleum finishes, stove pipe enamel, radiator enamel, and many other lines of painting materials can be readily sold at this season of the year if they are featured and brought to the attention of the buying public.

The indoor season is rapidly approaching. Why not use this as a basis for conducting a paint-selling campaign during the next two months.

The home of every man is used during the winter months for entertaining, or even spending quiet evenings there, and everyone will admit that the more attractive and pleasant the home appears, the more pride the family will take in it. Almost every man spends quite a number of evenings at home during the winter months, and these could be devoted to the brightening up of his house.

These facts will have to be brought to the attention of your customers, as most people think the proper time for this work is in the spring. Why should any man live in his house all winter and then as soon as he can take advantage of the outdoor air by enjoying his evenings on the verandah or elsewhere, start to paint up the interior of the house?

One of the quickest ways to bring these facts before your customers is to make a window display of paints used for inside work. Possibly a couple of neat window cards bearing helpful suggestions would bring the attention of your customer or the passer-by to the idea of brightening up his home. It might also be a good plan to mention these things to customers who enter your store, as it could be done without any trouble while waiting on them, and point out to them the advantages to be gained by doing this work at the present time.

Newspaper advertisements can also be used effectively in getting the public interested in preparing the home for the indoor months.

One of the most redeeming features of brightening up during the late fall months by the man who does not do this work himself will be the argument of cost. In the first place, labor is cheaper than in the summer months, as it is the off-season of the trade, and naturally those employed in that work, are only too anxious for employment and will not make their prices too stiff. Then, again, skilled workers could be secured, as there would be a larger field of men to choose from.

Selling Paint Brushes

There is another point in connection with sales in the paint department at this season of the year—and that is the selling of paint brushes.

This is an important point and one which is sometimes overlooked by hardware dealers. Paint is well displayed. Special efforts are put forth to make paint sales. Why not specialize on paint brushes as well? In the majority of cases where paint sales are made, brush sales may also be made. One out of twenty homes has not a really good paint brush in it. The reason in many cases is that proper care is not taken of the brush after it has been used. Whether people are ignorant of the correct method of treating a brush after it has been used, or whether brushes become worthless simply through carelessness, is a matter hard to determine at once. But when painting is to be done, a dry, hard, unworkable mass of hair is too often found to be the only thing in the line of a paint brush at hand. It is needless to add that good work cannot be accomplished with such an article, and the result is that either a new brush has to be bought or much labor has to be expended in cleaning up the old one—and even at that there is no guarantee of satisfaction after the old brush is restored to a workable condition.

But whatever the conditions in the homes where paint is used, few will doubt that new paint brushes are needed when it comes down to doing fine work. There is an opportunity then for the hardware dealer to make greater brush sales than he is doing if only he puts forth increased efforts to do so.

In the store of one large retail concern which the writer has in mind a part of the paint department is specially devoted to paint brushes. One cannot enter the department without being impressed by the fact that a specialty is made of this line. Many drawers containing brushes lines the walls, and each has a sample brush fastened on the front of the drawer so that it is at once visible to the customer and to the salesclerk. A great range, not only in style and quality of brushes, but also in sizes, is shown. Thus the complete stock of brushes is open before every customer who enters the department, and it becomes a very easy matter to pick out the size, shape and quality of brush desired.

There are several advantages of such a system as this. Having brushes displayed in the store, and in the paint department, draws the attention of people to brushes at the time that they are making a paint purchase, even before any reference is made by the salesclerk to the possibility of a brush being needed. Again, a full range of brushes is displayed before the customer. If he does not see, at the first glance, the style of brush that he desires, he is at least impressed by the number of shapes and sizes of brushes displayed, and is led to continue his search, which is done almost without effort.

The time both of the customer and of the salesclerk is greatly saved. If a clerk has to pass half-way down the department, pull down a box of brushes, lay out the different sizes before the customer, return for a second supply, and so on, great time is taken up in

What makes Boeckh's Brushes so "Bristle Tight"!

BEX-O-LAC REG'D 1912

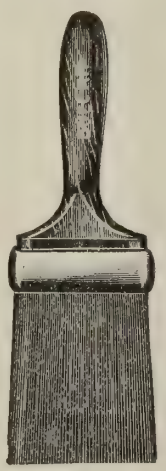
In order to make "Bristle Tight" Brushes it was necessary for us to secure something of a different nature to any of the so-called compounds used by Brush Manufacturers to set the Bristles in, as we found that we could not depend on the many mixtures with rubber, resin, etc., for their basis.

BOECKH TRADE MARK EST'D 1856 TORONTO

By using Bex-o-lac the brushes are not subjected to any process involving intense heat, to harden the setting, as such is very injurious to the elasticity and painting qualities of the bristles.

After several years of experimenting, we have been successful in working out a formula—the product being *superior to anything now used as a brush setting,* and one that will absolutely, under all conditions, hold each and every bristle firmly in its place.

It is protected under the registered name of "Bex-o-lac," and is used only in the manufacture of



BOECKH'S PAINTERS' BRUSHES

which are guaranteed not to shed the bristles.

The Boeckh Bros. Company, Ltd.

TORONTO, CANADA

There's never a complaint with JAMIESON'S PAINT

Its quality is complaint-proof.

Its working qualities are complaint-proof.

Its finish and durability are complaint-proof.

Its price, profit and proposition are very attractive.

making a comparatively small scale. There is a tendency, too, after a delay of that kind for the customer to grow impatient, pick up any style of brush about the size he wants, and put an end to wearisome waiting. And the result in such cases very often is that imperfect satisfaction is derived from the purchase.

TORONTO PAINT MARKET

(Continued from page 48.)

cent reductions in prices have been in effect. The city demand for white lead has improved during the past week and country dealers are also buying more freely. The price is very firm at the present base for pure lead of $9.60 per 100 lbs. in ton lots with the usual 30c ad-advance for less than ton lots.

Linseed Oil.—Linseed oil has again advanced in price. The situation in regard to receipts of flaxseed is unchanged and the immediate prospects for any improvement are very slight. The chief difficulty seems to be that the inclement weather in the West has had a bad effect on threshing operations and that only a small percentage of the flaxseed has been threshed to date. The mills are receiving very small shipments as compared with a year ago. Present prices are expected to hold firm until conditions are improved. No improvement in the demand for linseed oil is noticeable, and buying is only for immediate needs. The following prices are general on the local markets:

	Per Gallon	
	Raw	Boiled
1 to 2 barrels	77c	80c
3 to 5 barrels	76c	79c
6 to 9 barrels	74c	77c

10 barrels and over, open.

Glass.—Local jobbers report a falling off in business, the improvement which has been noticed during the last few weeks having almost entirely disappeared again. Prices are holding firm and no change is expected for some time.

Gasoline.—The prediction in recent issues that the price of gasoline was bound to go to higher levels has proved correct, as a further advance is in effect this week. The latest advance of 1c per gallon makes quotations on the Toronto markets as follows:

	Per gal.
Any quantity in barrels	22c
Drums (40 gal.)	20c
Tank wagon	19½c

Benzine.—In sympathy with the advance in the price of gasoline, the price of benzine is similarly affected and a new price of 21c per gallon in barrels is now in effect.

Putty.—Sales of putty are not as good this week as during the past week or so, which can be attributed to the fact that the demand for glass has fallen off. Prices are firm and quotations at the following figures rule on the local markets:

	Per 100 lbs.
Bulk in casks	$2.50
Bulk in drums	2.70
Bulk in 25-lb. drums	2.80
Bladders in barrels	3.10

Pure putty, 60c per 100 lbs. advance.

WINNIPEG MARKET

(Continued from page 43.)

he advised the writer that business in oils and greases and gasoline had far exceeded their greatest hopes. They are receiving orders by long distance phone and telegraph, and they are having some difficulty in keeping up with the rush. They are, however, handling the situation extremely well, and do not expect to unduly hold up any orders from now on.

It might be well to mention that woven fence is likely to advance. We may have to report before another week that these advanced prices have gone into effect. It is certain that before the 1st of January ruling prices will be very much higher than they are to-day.

It is to be hoped that the fine weather we are now having will continue for another month or six weeks, and if so, we have hopes that business will increase sufficiently so that last year's figures will be exceeded. It is almost certain that business for the balance of the month of October will show a decided increase over the first two weeks.

THOU SHALT NOT STEAL—TIME

(Continued from page 36.)

Many men have committed self-murder, whose first offence was killing time.

They started in murdering time by seeing, not how much but how little they could do and still hold their jobs.

By doing this they lost their jobs—then with no recommendation they could not get another—then they scoured on humanity, became criminals and degenerated into the hold-up, the safe cracker or the common house thief.

Driven into a corner in their career of crime men have often shot themselves and have murdered their intended victims of theft.

First they kill time. That was the first link in their chain of killing.

They killed not only time but opportunity and finally ended by killing men, perchance themselves.

Time killers often kill their own families by the slow starvation process. Babies are starved to death and worked to death before they are born.

Wives and mothers groaning under burdens, God never intended them to bear, driven to premature graves by overwork and over worry, are the grim and gruesome witness of the crime of the time killer.

The man, or the question mark for one who says, "I am earning my salary now and I will be blest if I will do any more," is one of the most polite types of time-thief and time-murderer.

And yet Shakespeare was right when he said, "Our only crime is ignorance."

Such men are ignorant of the basic law of service, which is as follows:

THE INTENSITY OF THE HEAT OF REWARD VARIES DIRECTLY WITH THE VOLUME AND INTENSITY OF THE FIRE OF SERVICE.

Some of the logical effects following the crime of stealing and killing time are that promotion cannot come—a better man gets the job and so it goes; you know the rest.

The time killer succumbs to the law of the Survival of the Fittest and gradually takes his place in the ranks of the unemployed and finally in the still lower rank of the unemployable.

Yes, I know I am speaking plainly on this subject. It deserves plain words.

A lack of understanding of nature's basic principle, the Principle of Service, is accountable for more misery in the world than anything else. It is fraught with far-reaching economic consequences.

Let enough people get busy "tiring themselves out holding themselves back" in the industrial world and employers begin to see that they are not realizing returns on their investment; capital becomes cautious, railroads cease to build, factories cease to create industries, depression comes on, panics ensue and millions suffer, the guiltless with the guilty.

Time killers murder millions whom they never come in contact with.

The greatest evils are those invidious ones which seem harmless.

Let one person murder another and the whole community sets up the hue and cry. The guilty one will be pursued and apprehended if possible, at any cost.

Yet millions of time-murderers ply their deadly trade and no one says anything about it.

Time killed by time killers every day, would, if converted into creative energy, amount to millions in created wealth.

Don't tell me that if this were true "the rich would get richer and the poor poorer."

Don't tell me that the five per cent., the employers of the world, would gobble up all of the increased profit and not increase the reward of the ninety-five per cent.

(To be continued next issue.)

MAKE MONEY FROM GOOD PUMPS—PROFIT

Unless a metal pump is made just right it will leak at joints or valves.

"Aremacdee" pumps do not give dealers who sell them trouble and loss from defective service in "Aremacdee" pumps sold customers.

Pumps for every use—hand or motor—force or lift — every type a dealer can sell.

WEEKLY PAINT MARKETS

MONTREAL

MONTREAL, Oct. 21.—There is practically no change in the paint situation further than that the developments as to prices, which have been awaited for some time to settle conditions as regards the future, are expected within a few days. As has been previously stated, manufacturers are in hope of being able to make a reduction which will stimulate demand, but until the zinc producers make their announcement as to quotations on supplies for future delivery the extent of this reduction, if any, cannot be determined. The zinc prices will probably be in the hands of the paint makers before many readers peruse this column, and before another week the announcement of quotations to the trade may be looked for. With the situation cleared up for some time to come a brisk movement is expected, reports indicating that retailers' shelves have become pretty bare and buying has been for no more than actual consumption demanded.

While the movement of mixed paints has been dragging, there has been an improved demand for oil, white lead and some other lines, where it is recognized that the present prices are firm and more likely to advance than decline, or where the approaching close of navigation has encouraged the shipment of heavy goods. Oil is very firm, and said to be likely to advance if the present market for flax is sustained. Turpentine is firmer, and shows advances in some quarters; and lead continues strong.

Linseed Oil.—The oil situation is firmer. This is noted in a stronger tendency in the quotations and the advance of the low figure 1c for raw and boiled. However, it is stated that the present prices are not an actual indication of the market in relation to the cost of raw materials. Flax is in a very strong position, and the statement is made that 5c higher than the figures quoted would no more than provide the usual margin of profit on the present cost of production. The rapid movements in the flax market are quite evidently again creating very unsettled conditions in the trade, as jobbers take advantage of having purchased supplies at low prices to take reasonable profits and extend advantages to their customers. The following quotations cover the present situation:

	Raw.	Boiled.
1 to 2 barrels	68-70c	71-73c
3 to 5 barrels	67-69c	70-72c
6 to 9 barrels	66-68c	69-71c

White Lead.—The lead situation continues steady and firm. There is a very fair movement to outside points, indicating that the present basis is recognized as being a firm one, and also that stocks are being secured prior to the close of navigation. The quotation is $9.45, with 30c added for less than ton lots.

Zinc.—The crux of the mixed paint situation is zinc. Until the quotations on futures are announced by the producers the cost of mixed lines cannot be figured definitely. Lower prices are hoped for, but there is no assurance on this point. The end of the present week should see the situation cleared up, however, by a statement from the New Jersey interests, and this will be followed by an announcement from the paint manufacturers.

Turpentine.—The firmer tendency in the turpentine market has resulted in an advance of 2c from the bottom of the range on the part of several houses. In some quarters 58c is still heard, but 60c is more general, and it seems altogether likely that all firms will shortly be at least as high as this. On the other hand, there are quotations of 62c, and there are indication that at least one firm may go 1c above this. Difference in the cost of supplies on hand and a desire to encourage business appear to be the only reasons for the big spread in prices.

Gasoline and Oil.—A further advance of 1c in the prices of gasoline and benzine is announced. The quotation for the former is now 19½c for drums and 19c tank wagon, and for the latter 18½c for drums and 18c tank wagon. Oil continues at 13c and 15½c for single barrels, the difference representing quality. City business shows no improvement, but to the outside points there are heavy shipments on fall deliveries in view of the approaching close of navigation.

Dry Colors.—Recent efforts to rake up supplies of certain dry colors, particularly bright reds, have revealed more than ever the shortness of these supplies and the evident impossibility of replacing them so long as trade with Central Europe is cut off. It is evident that the time is approaching when practically all shades of bright reds will have to be withdrawn. There is also a difficulty with blues, but this is rather a question of cost, there having been a very great advance in certain chemicals.

Glass, Putty, etc.—There is a fair movement of window glass, but otherwise there is no improvement in the situation; prices are steady. Putty is in fair demand, this being the season for this commodity. However, the movement is far from being normal, although comparatively heavy following a very slow summer.

TORONTO

TORONTO, Oct. 21, 1914.—Paint manufacturers and jobbers report that business, although not by any means brisk, is very satisfactory, when present conditions are taken into consideration. Retailers' stocks are admittedly low and a great many merchants are only buying in small lots for immediate requirements. This policy is being followed owing to the fact that lower prices on some lines of paints are expected in the near future. Linseed oil and turpentine have both advanced in price during the past week. Owing to the continued fine weather there has been a fairly good demand for paints required for outside painting. In anticipation of the indoor months, a great deal of inside painting is also being done.

There is a good demand for stovepipe enamel, and other specialty lines.

Turpentine.—In sympathy with the advances in the primary markets which have been made recently, local jobbers have found it necessary to advance the prices also. During the past week the price of turpentine has advanced 5c per gallon. Large quantities of turpentine are said to have been exported from the Savannah of late, and this, together with the usual falling off of supplies, has caused the higher prices to go into effect. Lower prices are quoted in some quarters, but the following are the ruling prices:

	Per Imp. gal.
1 barrel lots	70c
2 to 4 barrel lots	69c
5-gal. lots	77c

White Lead.—A better movement in white lead has been noticed since the re-

MOORE'S

House Colors

A value that appeals to particular painters

Moore's House Colors ensure satisfaction everywhere because they work in unison with the brush and have immense covering capacity—their finish is excellent and extremely durable and their price is attractive.

Moore's House Colors combine the very best and most durable pigments thoroughly combined with pure, old-fashioned, well-settled linseed oil and the best dryer —they are free from spurious oils, benzine, water, alkali or other worthless materials.

You will profit by an early acquaintance with our exclusive agency proposition. It's a winner.

Drop us a line for full details.

Daisy Churns FOR HAND OR POWER

Daisy Churns FOR HAND OR POWER

The Churn Farmers Ask For

Farmers ask for the Daisy Churn because they have used them and their neighbors have used them for years. They know that the Daisy is the best barrel churn.

Notice the neat appearance. There is nothing clumsy or ungainly about it. The frame is made of flat iron, very compact and strong. The parts of the frame are riveted together and it can be put up in a moment or two by fastening the central board in place. There are no stove bolts in the frame of the Daisy Churn. The legs are out of the way of the operator and you can put a pail close to the churn to drain it off. The beautiful finish of the Daisy Churns will sell them. The oak barrels are handsomely varnished a golden color and the hoops and handle painted in bronze.

The barrel is hand made, to insure an even thickness of the staves from top to bottom. There is practically no trouble with staves breaking. The barrel is correctly shaped, which adds to the appearance.

The frame and barrel—these are two of the most important points out of a dozen we could mention. The Daisy Churn has earned its good reputation and deserves it well.

We make the Daisy Churn to work by hand, and as a power churn for use with gasoline engine. The hand churn can also be supplied for fitting with power attachments.

We also make BT Well and Cistern Pumps, BT Washers and Power Washers, BT Ladders, BT Water Bowls and Tanks, BT Hay Carriers, BT Oat Bowls and Feed Racks, BT Barn Door Track, BT Grain Grinders, BT Butter Workers, and BUTTER BOXES.

Be sure that you have the BT General Catalog No. 23.

The Paints and Varnishes that fortify you against complaints and make a Big Advance in your turnover.

MARTIN-SENOUR
PAINTS AND VARNISHES

(MADE IN CANADA BUT SOLD ON MERIT)

The exclusive Agency for this line is a most valuable asset to any merchant's business. Martin-Senour Paints and Varnishes are now so well known for their unsurpassed quality and from the fact that they are so extensively advertised, that more and more people are attracted to the store where they are handled, and consequently they are the easiest and most profitable to sell.

The high quality of each and every Martin-Senour Product is such as to retain and increase the demand of those who have once tried them.

During a year when many manufacturers have curtailed their advertising, sales help and co-operation to such an extent as to almost handicap the dealer, it has been quite noticeable that Martin-Senour Paints and Varnishes were more strongly advertised than ever before. A message of quality and service was circulated through the largest list of Newspapers, Magazines, Farm and Religious Journals ever used by a Paint Firm in Canada. Nearly every Paint user read this message, and Martin-Senour Dealer Agents reaped the benefit.

Martin-Senour sales help and co-operation is the strongest, consisting of the most effective features of Interior and Exterior Displays, Mailing Campaigns, Follow-Up Systems, and direct help of Salesman.

This policy will not be curtailed.

It will be **continued** and **strengthened.**

Would you not like to be counted as one of our **satisfied** and **successful** Dealer Agents who is profiting by this policy?

Drop a line for our Proposition, but do it to-day.

JOHN CHATILLON & SONS CUTLERY SCALES HARDWARE NEW YORK, U.S.A.

The Name of

CHATILLON

has been a guarantee of quality to the trade and consumer ever since 1835. The complete line of **Scales** we manufacture gives universal satisfaction to the user and allows a liberal margin of profit to the dealer.

Twenty-five years ago we became interested in Foster Bros.' brand of **Butcher Knives** and cutlery. To-day this line enjoys a world-wide sale. You will find that it is just as easy and profitable to handle this cutlery as it is to sell our Scales.

Our products are the results of years of experience. Only the best materials for their particular purposes are used throughout. Our own skilled workmen are experienced in the manufacture of our products, and we continually strive to maintain a high standard of quality.

JOHN CHATILLON & SONS

85 Cliff St. **New York City**

The Finish that sells the year round

SHERWIN-WILLIAMS FLAT-TONE

Keep up the sales of your Paint Department when house painting falls off by selling Flat-Tone.

People are now considering the interior decoration of their homes before winter comes along. The desire is for attractive and comfortable homes, particularly during the winter, when so much time is spent indoors.

The beautiful Flat-Tone effects—its durability and economy—all appeal to your customers, at this time of year. Demonstrate its sanitary, washable surface, and beautiful flat, velvety finish.

Flat-Tone will interest your customers because it is adapted for every kind of wall—plaster, stucco, burlap, beaver board, metal walls and ceilings, and woodwork, and it is the ideal finish for every room in the house.

Send us names of prospective Flat-Tone customers; our direct promoting will help your own efforts in going after this profitable fall business. If you don't handle Flat-Tone, now is your opportunity to make a satisfactory beginning.

MONTREAL

CROWBARS

No. 102-A—CHISEL POINT

We offer you bars made of High Carbon Steel at the same price as you are buying the Mild Steel Bar elsewhere. Send us a trial order.

B. J. COGHLIN CO., LIMITED, Office and Factory: Ontario St. East, MONTREAL

THE PROGRESSIVE MANUFACTURING CO.
Torrington, Conn., U.S.A.

FORSTNER BITS

bore their way right through tough, hard, knotty, cross-grained wood and leave a smooth hole and a clean surface. That's performance. THEY DIFFER FROM ALL OTHER BITS, BEING GUIDED BY THE RIM INSTEAD OF THE CENTER. That's scientific construction. They bore any arc of a circle and can be guided in any direction. That's adaptability.
Made for Brace—made for machine. Packed singly—packed in sets. That's convenience. And they sell to Wood Workers, Carpenters, Cabinet Makers and others. That's why you should sell them. Order through your jobber to-day.

Malleable Iron Castings

for Carriage and Special Castings of all Kinds

Manufactured by

THE KYLE MALLEABLE CASTINGS CO.

MERRICKVILLE, ONT.

Atlas

10 Cent Fly Swatter

This swatter has an extra long handle — 10 inches. It is very neatly and securely bound with soft green felt — cannot mar the finest furniture. Especially adapted for parlor or drawing room use. We have made it extra strong and flexible — will outlast any now on the market.

Our 5 cent swatter is the best ever sold for a nickel. Also it has a triangular fold, permitting the insertion of your ad. if you desire.

Now is the time to place stock orders. We'll gladly quote prices and terms.

Atlas Mfg. Co.
New Haven, Conn.

You can talk across the continent for two cents per word with a WANT AD. in this paper.

WIRE NAILS

ANY SIZE OR PATTERN

One Quality—The Best

WIRE BALE TIES

for baling hay, pulp, box shooks and many other things.

POULTRY NETTING STAPLES — Bright or galvanized.

WIRE FENCE STAPLES.

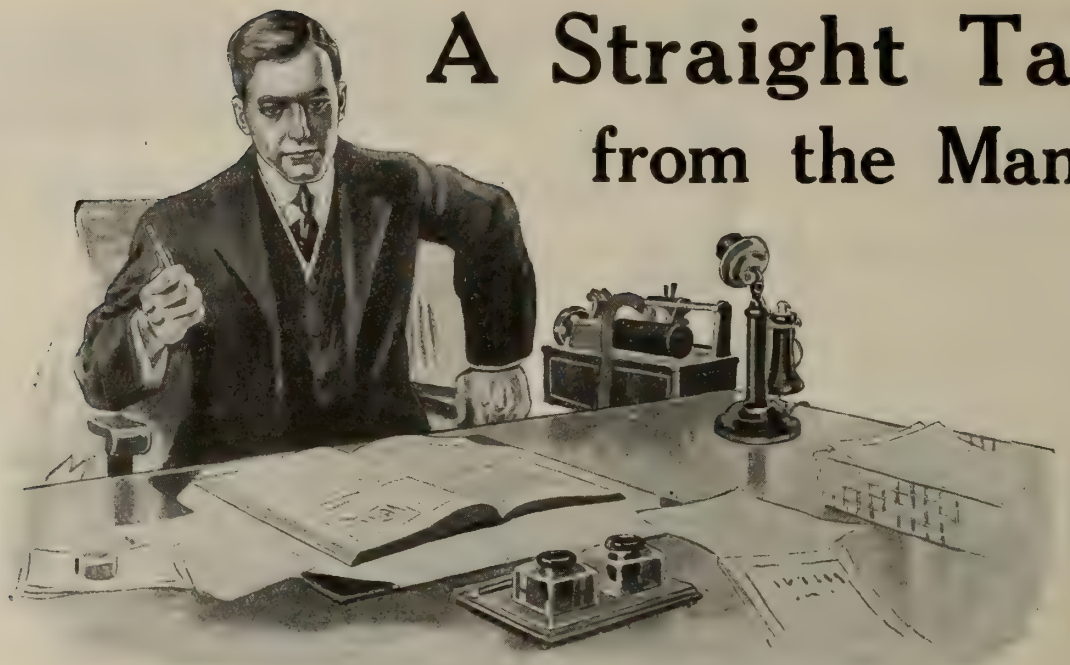
You can talk across the continent for two cents per word with a WANT AD. in this paper.



A Straight Talk from the Manager

The Business Revival Is Here

THE Sales Manager of one of the largest manufacturing concerns in Canada told me, the other day, that within the past two weeks he had found rush orders coming in by wire from all over the country. "We have our complete staff working now," said he, "and expect to go on an overtime schedule next week."

The firm referred to makes a wide range of household lines, and has found business pretty dull for over a year. The fact that their trade is undoubtedly reviving has a big significance at this time.

The moral to you as a retailer is that you should lose no time in taking advantage of improved conditions. The full employment of factory workers, and the marketing of our magnificent crops, cannot help but create possibilities for selling more of your goods.

The advertising pages of this week's issue will afford you many suggestions of lines that you can profitably push just now.

J. G. L.

Condensed or "Want" Advertisements

Those who wish to sell or buy business or stocks, obtain competent help, connect with satisfactory positions, or secure aid in starting new enterprises, should not fail to use the Want Ad. Advertisement Page of HARDWARE AND METAL. It is the central market place of the hardware trade throughout Canada. There is always someone somewhere looking for just such proposition as you have to offer. RATES (payable in advance):—2c. per word first insertion, 1c. per word subsequent insertion, 5c. additional each insertion, when Box Number is required. Each figure counts as one word.

WANTED

SASKATCHEWAN, ALBERTA, BRITISH Columbia. A good market for articles used by farmers. Experienced Western traveller wants an engagement. Box 220, Hardware & Metal. (44)

AGENCIES REQUIRED—HOUSEHOLD COMmodities, novelties, and agriculturalists' supplies, made in Canada. Apply to Frederic Sara & Company, Manufacturers' Agents, 326 Ninth Avenue West, Calgary, Canada. (44)

AN AMERICAN MANUFACTURER MAKING a new line of small garden implements wants to appoint as exclusive representatives a firm or individual calling on all the wholesale hardware, agriculture implement and department store trade in Canada. No investment necessary. Liberal commissions. Send references. Box 221, Hardware and Metal.

BUSINESS CHANCES

MANUFACTURER OF PROFITABLE SHEET metal specialties, wishing to extend business, offers quarter interest to competent sheet metal man with one thousand dollars. The Simplex Co., Owen Sound, Ont. (45)

MISCELLANEOUS

FIRE INSURANCE. INSURE IN THE HARTford. Agencies everywhere in Canada.

WAREHOUSE AND FACTORY HEATING systems. Taylor-Forbes Company, Limited. Supplied by the trade throughout Canada. (tf)

ADDING TYPEWRITERS WRITE, ADD OR subtract in one operation. Elliott Fisher, Limited, Room 314, Stair Building, Toronto.

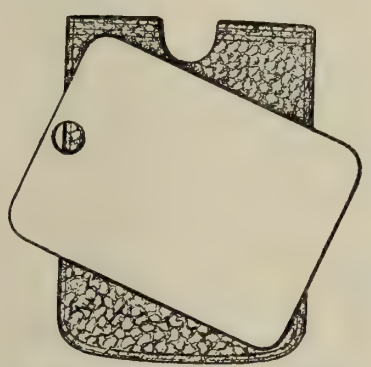
DOUBLE YOUR FLOOR SPACE—BY INstalling an Otis-Fensom hand-power elevator you can use upper floors as stock room or extra selling space, and increase space on ground floor. Costs only $70. Write for catalogue "B." Otis-Fensom Elevator Co., Toronto.

GOOD STENOGRAPHERS ARE WHAT every employer wants. The place to get good stenographers is at the Remington Employment Department. No charge for the service. Remington Typewriter Co., Ltd., 144 Bay St., Toronto.

ESTIMATING. BY EDWARD NICHOLS, Architect. 128 pp., 22 illus. Cloth binding. Containing invaluable information for the use of Architects, Contractors, Builders, Plumbers and Heaters, Painters, Roofers, Cornice-Makers, and other workers in the building trades. This handbook tells just how to go about the task of making an estimate intelligently. Price, postage paid, $1.00. MacLean Publishing Co., Ltd., 143-153 University Ave., Toronto.

HARDWARE STORE BUSINESS METHODS—The authors of the articles in this book are for the most part practical and progressive hardware merchants. The embodiment in these articles of the experience of such able and enterprising men and the suggestiveness of the principles and maxims presented make this volume of infinite value to that trade. The 40 subjects discussed include: Rules and Regulations for the Hardware Store; Hardware Buyer; Good Methods in Stock Taking; Prices and Catalogues; Collecting Accounts; The Merchant and His Employees; Changing Business Conditions and How to Meet Them; Profit Figuring System; Starting in Business; Changing a Credit into a Cash Business, etc. 220 pages. Price $1.10, postage paid. MacLean Pub. Co., 143 University Ave., Toronto.

HARDWARE WINDOW DRESSING—THIS IS the first book ever written devoted exclusively to Hardware Display. There are 256 pages and over 200 illustrations with full working descriptions. It is the purpose of this book to illustrate and explain how hardware windows may be dressed to the best advantage—how they can be made to sell goods. It is not a theoretical work but a collection of specimens of the best work and ideas of the most expert window dressers in the world. These men have contributed their experience covering the many phases of hardware window display. This volume, therefore, represents the sum total of information on this subject presented as concisely as is consistent with clearness. By following the simple illustrated directions given in "Hardware Window Dressing" any clever clerk can put in good hardware displays at no cost whatever. Size 8x11 inches. Price $2.60 postpaid. MacLean Pub. Co., 143 University Ave., Toronto.



The Metallic Military Mirror

Made of heavy sheet Brass, highly nickel plated; is a smooth, perfect mirror and will not rust. Every soldier must shave, but an ordinary mirror cannot be carried without breaking. This mirror, 3¼x4¼, fits the tunic pocket, and besides being useful, is also a protection, and may

Save the Soldier's Life

Metallic Mirrors appeal to those having brothers, sweethearts or friends at the front.

These mirrors are dispatched easily, and make ideal gifts.

A FAST CUT and Long Life THAT MAKE FAST FRIENDS

The most exhaustive comparative working tests have proved that

DELTA FILES

are superior over all other makes for fast-cutting, edge-retaining qualities.

When you sell your customer a "Delta" file you are selling him the goods with satisfaction - giving qualities that will bring you his patronage along other lines.

The "Delta" trademark on the tang of a file represents a guarantee of "satisfaction or money refunded."

There is a shape and size for every purpose.

We help to stimulate "Delta" sales by supplying our agents with attractive advertising matter, besides circularizing their vicinity, mentioning them as our distributors.

Order from your jobber. If he cannot supply you, write us.
